DYNAMICS OF COMPOSITION OF MONITORING PARTICIPANTS

Regional structure of the enterprise survey participants in Q2 2026

Survey participants size structure

Survey participants sectorial structure

In Q2 of 2026 the number of respondents compared to the previous quarter increased by 15 enterprises and amounted to 3507.

DYNAMICS OF DEMAND FOR FINAL PRODUCTS

Final goods demand, DI

	2023				2024				2025				2026		
Answers of enterprises, %	1 qtr.	2 qtr.	3 qtr.	4 qtr.	1 qtr.	2 qtr.	3 qtr.	4 qtr.	1 qtr.	2 qtr.	3 qtr.	4 qtr.	1 qtr.	2 qtr.	3 qtr.*
Increase	17,0	22,5	21,6	20,2	14,1	21,1	21,6	21,4	16,0	21,8	20,6	20,0	13,2	20,9	16,5
No changes	54,5	55,7	57,3	56,4	58,8	58,9	59,5	56,5	56,7	56,5	58,4	57,4	56,7	55,8	45,4
Decrease	23,9	17,5	17,0	19,2	22,7	15,9	15,2	17,7	22,6	16,7	15,6	16,9	23,5	17,0	8,2
Do not know	4,6	4,3	4,1	4,2	4,3	4,2	3,8	4,4	4,8	5,0	5,4	5,7	6,7	6,3	30,0
Diffusion index, $DI = \frac{line1 + 0.5 * (line2 + line4)}{2}$	46,5	52,5	52,3	50,5	45,7	52,6	53,2	51,8	46,7	52,5	52,5	51,6	44,9	52,0	54,1
DI, seasonal adjusted	51,9	50,8	49,9	49,6	50,7	50,9	50,8	51,0	51,6	50,8	50,3	51,0	49,6	50,3	51,9

DI -Real sector

In Q2 of 2026 the demand for final products in the real sector moved into the positive zone. The diffusion index (hereinafter - DI) was 50,3. The acceleration of the indicator was noted in the production of goods sector (54,6) and also in services (51,3).

According to the expectations of enterprises in the real sector in Q3 of 2026, the demand in real sector will be accelerated and will get 51,9, while it will slow down in industry and services to 54,2 and 50,5, respectively.

PRICES CHANGES IN THE REAL SECTOR

Final goods prices, DI

Raw materials prices, DI

Assessment of pricing factors importance , answers in %

- Prices for raw materials
- Labor costs
- Exchange rate
- Fuel prices
- Other
- Demand
- Taxes/fees
- Productivity
- Competitor prices

In Q2 of 2026 the growth rate of prices for final products of enterprises and for raw materials in the economy decelerated (DI – 58,4 and 71,2 accordingly).

For the vast majority of enterprises the most important factor in setting the price of final products is the price of raw materials (for 77,5% of enterprises) and demand (75,2%), and also taxes and fees (67,9%), labor costs (65,5%), fuel prices (56,5%), exchange rate (55,2%) and competitor prices (55,2%).

In Q3 of 2026 enterprises* expect a slowdown in the rate of growth of prices for raw materials (DI = 65,7), and for final products, (DI = 55,9).

PRODUCTION OUTPUT

Capacity utilization level

(share of respondents, %)

DI changes in production output, DI**

In Q2 of 2026, the production capacity utilization (CU) of enterprises was lower than the level of the Q1 of 2026. The weighted average* level of the CU was 51,1%. In Q2 of 2026 the volume of production of final products (works, services) increased, DI was 50,2.

In Q3 of 2026 enterprises expect some increase in production volume. The DI by expectations is 51,7.

* Arithmetic weighted average is the average value of the interval, weighted by the share of enterprises.

** The higher (lower) the DI from the level of 50, the higher (lower) the growth (fall) rate of the indicator, the level of DI = 50 means no change

BALANCE SHEET STRUCTURE: ASSETS

Assets structure

Short-term assets Structure

Assets turnover indicators

In Q2 of 2026 in the structure of assets of companies in the real sector of the economy, the share of short-term assets increased to 39,6%, when long-term assets decreased up to 60,4% (in Q1 of 2026 – 37,7% and 62,3%, respectively). Asset turnover* increased to 20,6%, and working capital turnover ** increased to 39,5%.

In the structure of short-term assets in the current quarter, the share of receivables increased, amounted to 36,9% (in Q1 of 2026 – 35,2%), the share of inventories slightly decreased to the level of 19,9% (21,9% in Q1 of 2026).

Asset turnover = Income from product sales / Assets 100

**Turnover of current assets = Income from product sales / Short-term assets* 100

BALANCE SHEETS STRUCTURE : LIABILITIES

Liabilities structure

Long-term liabilities structure

Short-term liabilities structure

Share of enterprises with overdue debts

In Q2 of 2026 in the structure of liabilities there was an increase in the share of short-term liabilities to 29,8 and in the share of long-term liabilities to 24,9%, and some decrease in a capital to 45,3%. In the structure of short-term liabilities decreased from 48,7% in Q1 to 45,2% in Q2 of 2026.

The share of companies with overdue debt on their balance sheets increased slightly: accounts payable to 20.4%, bank loan debt to 4.1%. The share of companies with overdue accounts receivable on their balance sheets decreased to 24.4% in Q2 from 24.6% in Q1 of 2026.

INVESTMENT ACTIVITY

Funding source for fixed assets, %

As before, most of the enterprises use their own funds to finance fixed and working capital (69,5% and 87,1%, respectively).

Meanwhile the share of enterprises that financed fixed assets and working capital via bank loans amounted to 8,5% and 20,1% respectively.

The share of enterprises that did not finance fixed assets and working capital amounted to 37,1% and 19,6% respectively.

Funding source for working capital, %

SOURCES OF WORKING CAPITAL FINANCING

Sources of working capital financing

To finance working capital, the majority of enterprises (87,1%) used their own funds, of which 48,2% were profits and 38,9% were shareholders'/participants' own funds. Loans for these purposes were used by 20,1% of enterprises (of which 9,4% used a tranche on a previously opened credit line, 10,7% - loans in banks and organizations engaged in microfinance activities).

Among other sources, in addition to those presented in the graph, enterprises also indicate advances from customers, financial assistance, intra-group loans (between the parent company and subsidiaries) and subsidies.

OBSTACLES FOR DOING BUSINESS

Proportion of enterprises reporting obstacles

According to the results of survey in Q2 of 2026, for 37,2% of enterprises the tax burden is an obstacle to doing business, and the market competition for 33,9% of enterprises became an obstacle to doing business (in Q1 of 2026 the share of such enterprises was 38,3% and 33,7% respectively).

The most important factors for enterprises are such factors as the lack of qualified personnel, the search for buyers (28,1% and 27,0%), regularity changes (21,8%), and return of accounts receivable (16,9%), underdeveloped infrastructure (14,9%), while access to financing is ranked at 8th (14,6%).

FINANCIAL AND ECONOMIC PERFORMANCE CHANGE

In Q2 of 2026 the average* return on sales* of enterprises increased in the mining industry – 38,1%, in manufacturing industry amounted to 24,5%. As a result, the average return on sales in the economy as a whole increased and amounted to 24,6%.

The share of enterprises planning to close the year with a profit amounted to 43,6%, 9,7% believe that the year will end with a loss. At the same time, 13,5% of the surveyed enterprises think to close the year with a balanced budget (without profit or loss), the remaining 33,1% cannot assess the financial condition of the enterprise by the end of the year.

*Return on sales *, in %*

Share of enterprises planning to close the financial year with profit / loss, %

ASSESSMENT OF THE FINANCIAL CONDITION OF ENTERPRISES

*Dynamics of changes in the financial condition of enterprises *, share in %*

Enterprises distribution by degree of reliability by dimension in Q2 2026, share in %

According to the results of a discriminant analysis based on an assessment of the financial ratios of enterprises, in Q2 of 2026, the share of enterprises with a critical financial condition decreased to 27,8%.

By dimensions, the share of enterprises with a critical financial condition among small enterprises is significantly higher (33,8%) than among medium-sized (22,4%) and large enterprises (15,7%).

* The respondent enterprises are distributed according to the degree of reliability based on the values of financial indicators according to the results of discriminant analysis.

See the methodological commentary on slide 21

Enterprises distribution by degree of reliability by type of activity in Q2 2026,*

In Q2 of 2026 in all sectors the vast majority of enterprises have a stable or normal financial condition. The largest share of stable enterprises is in agriculture (34,1%) more than in others, the largest share of enterprises with a critical financial condition is more in real estate operations sector (36,1%) and in trade (33,8%) than in other sectors. Water supply sector is turning out to be the most stable sectors, where the share of enterprises with a normal financial condition are higher (77,5%) than in other sectors.

BANKING SYSTEM IMPACT ON THE REAL SECTOR OF THE ECONOMY

Demand for loans

Lending applications consideration

Share of enterprises that have been denied for a loan

In Q2 of 2026, the share of those who applied for a loan increased compared to Q1 of 2026, 21,8% of the enterprises surveyed applied to the bank for a loan (19,1% in Q1), 20,6% of the enterprises received a loan (or 94,5% of those who applied for a loan). The share of loan refusals amounted to 1,2% of the total number of survey participants (5,5% of those who applied for a loan).

BANKING SYSTEM IMPACT ON THE REAL SECTOR OF THE ECONOMY

*Debt burden estimations of enterprises *, %*

Debt burden*	1%-20%	21%-30%	31%-40%	41%-50%	51%-60%	61%-70%	71%-80%	over 81%	no debt
share of enterprises, %	16,9	12,1	6,7	5,9	4,6	1,9	1,5	2,3	48,2

The weighted arithmetic mean value of the debt burden, %

The objectives of applying for loan in the past quarter, in %

In Q2 of 2026 48,2% of the enterprises that took part in the surveys had no debt. Most of those who had loans (16,9%) have a debt burden* within 20%. The weighted arithmetic average** value of the debt burden is 16,6%.

The vast majority of enterprises (81,7%) attracted a loan to finance working capital (purchase of materials, raw materials, semi-finished products, etc.), 9,3% - to purchase fixed assets (purchase of buildings, structures, vehicles, equipment, etc.), for refinancing purposes and for business expansion – 4,0% respectively.

* Monthly payment / income from sales of products

** Arithmetic weighted average is the average value of the interval, weighted by the share of enterprises.

BANKING SYSTEM IMPACT ON THE REAL SECTOR OF THE ECONOMY

Price conditions

Non-price conditions

Loan terms and rates in tenge

Loan terms and rates in foreign currency

In Q2 of 2026 the assessments of enterprises regarding price (the level of interest rates on a loan, the amount of additional commissions) and non-price conditions (the maximum size and term of the loan, requirements for the financial condition of the borrower, requirements for collateral) slightly improved but remained in negative zone.

The average interest rates on loans received by survey participants were 18,0% in tenge and 5,1% in foreign currency (17,7% and 5,3% in the previous quarter, respectively). According to enterprises, the acceptable interest rate for them on loans in tenge is 8,6%, and on loans in foreign currency – 3,6%.

FOREIGN ECONOMIC ACTIVITIES OF ENTERPRISES (FEA)

Implementation of foreign economic activity in the past quarter, the share of enterprises in %

Use of currency in calculations, share of enterprises in %

Foreign economic activity by activity type, share of enterprises in %

In Q2 of 2026 24,9% of respondents imported products to run their business, 6,5% exported, 13,4% exported and imported, and the vast majority (55,2) had not carry out foreign economic activity. The largest share of enterprises that exported products was in mining industry (17,7%), imported products was in trade (39,9%). In the manufacturing industry the largest share of enterprises engaged in foreign economic activity.

In settlements with foreign partners, exporters more often use the US dollar (70,9% of exporters), importers use the Russian ruble more (76,0% of importers). The Euro, British pound sterling, Swiss franc, Kyrgyz som and Turkish lira were also indicated as other currencies used in the settlements.

IMPACT OF EXCHANGE RATE CHANGES

*Dynamics of the impact of changes in the exchange rate, DI **

Impact of the exchange rate on the economic activities of exporters in Q2 2026

Impact of the exchange rate on the economic activity of importers in Q2 2026

In Q2 of 2026 the negative impact on the economic activity of enterprises of the change in exchange rates improved for USD, the ruble, EURO. The most negative impact for exporters was the change in the exchange rate of the tenge to the ruble and USD. Enterprises experience the least negative impact on their economic activities from the CNY/KZT and euro exchange rate.

* The higher (lower) the DI from the level of 50, the higher (lower) the growth (fall) rate of the indicator, the level of DI = 50 means no change

COMPOSITE LEADING INDICATOR*

In Q2 of 2026 the dynamics of the composite leading indicator (CLI), which is an aggregate assessment of surveys of enterprises in the real sector, demonstrates a slow down of economic activity in the real sector. CLI in Q2 of 2026 amounted to 99,9.

The dynamics of the CLI were negatively impacted by a slight decrease in the utilisation of production capacities and a relatively high tax burden, as an obstacle to doing business, while a positive impact was exerted by an increase in credit activity, an improvement in the profitability of enterprises and a reduction in overdue accounts receivable.

In Q2 of 2026, some increase of an economic activity is expected (CLI by expectations is 100,1).

* A composite leading indicator is used to identify turning points in the business cycle and provides good quality information about the state and directions of trends in the economic activity. A composite leading indicator reflects a summarized evaluation of opinions of managers of the interviewed enterprises regarding the existing and anticipated situation in their enterprises and possesses the forward-looking feature of the real GDP behavior for 1-2 quarters. Construction of CLI is based on the OECD methodology («OECD System of Composite Leading Indicators, Methodology Guideline», OECD 2012).

** The CLI parameters for Q3 2026 are calculated on the basis of expectations among enterprises in the real sector that participated in the survey.

- The diffusion index (DI) as reflected in tables and in figures is calculated as a sum of positive responses and a half of “no change” responses. This index is a generalized indicator which characterizes the behavior of the reviewed indicator. If its value is above 50 – this means a positive change, if it is below 50, then the change is negative. In doing so, the further (the higher) the value of the diffusion index deviates from 50, the higher are the rates of change (increase or decrease) of the indicator.
- The indicator of “an acceptable interest rate on bank loans” is calculated as the average of interest rates indicated by enterprises participating in the monitoring process as acceptable rates for these enterprises in terms of the existing level of profitability of production.
- Numbers reflecting financial ratios are provided as average values calculated based on the whole sample of interviewed enterprises as well as broken down by sector, where necessary, based on estimates of the quarter-end balance sheet numbers received from enterprises. In doing so, the evaluation data as well as the averages calculated on their basis are not aiming at obtaining the absolute precision of their values (since they are not the reporting ones) but rather serve for obtaining updated estimates and for analyzing the trends of the change in the state of the non-financial sector of the economy and its sectors.
- Discriminant analysis allows to identify the most informative indicators of the financial condition of the enterprise and determine the approach of a crisis situation at the enterprise, and thus classify them according to the degree of reliability. The distribution of enterprises into groups (stable, normal and critical) is carried out using classification functions, including 3 financial indicators: the income growth rate from sales of products per employee, the coefficient of financial independence and the equity capital growth rate. Details in the economic research <https://www.nationalbank.kz/file/download/9013>.
- The composite indicator (CLI) possesses the forward-looking feature of the real GDP behavior for 1-2 quarters. The time series of the CLI are cleared of seasonality and do not contain the trend, i.e. they only include a cyclical component as determined by short-term fluctuations of the economic market environment. For comparability purposes, the resulting cyclical components are standardized, i.e. they are reduced to one (non-dimensional) unit of measurement.
- The CLI serves to reflect short-term development trends in the real sector of the economy as a whole. It possesses the following features: 1) it has a forward-looking nature; 2) it reflects a cyclical nature in the development of the real sector of the economy; 3) it is quickly designed since it is built on the basis of on-the-spot interviews of enterprises.

METHODOLOGICAL COMMENTS
