BUSINESS ACTIVITY INDEX

BAI dynamics

* A value of the indicator above level 50 means a positive change, below level 50 - a negative. The further (higher or lower) the index value is from the 50 level, the higher the rate of change (increase or decrease) of the indicator.

According to the results of a monthly survey of 468 enterprises in the real sector, business activity deteriorated slightly in August 2022, amounting to **47.8** (in July – 48.0).

There was a slight improvement in the index in production: the index rose to **48.7** (in July – 48.5). In mining and construction, the index fell to **44.9** and **45.7**, respectively (from 46.2 and 47.3 in July).

In the service sector, the indicator remained unchanged, amounting to **48.8**.

- The business activity index is a composite indicator that includes the aggregate of enterprises' answers to questions regarding the actual changes in the economic indicators of enterprises and the expectations regarding their changes in the future.
- The National Bank of Kazakhstan conducts a survey of enterprises participating in the monitoring of the real sector on a monthly basis

BUSINESS CLIMATE INDEX

Business cycle clock

Business climate assessment

Current and future business situation assessment, BA*

*Balance of answers (BA) is difference between positive and negative answers. Enterprises asked to assess the current business situation choosing one of the given answers «favorable», «unfavorable» and «neutral». Answers are weighted by respondents' size.

If index is above 0 improvement, if below 0 – worsening.

In August 2022, enterprises' assessment of **current** business conditions remained negative, despite a slight improvement to **(-)3.2** from (-)5.8 in July.

Estimates of **future** business conditions for the next 6 months improved slightly, amounting to **17.4** (in July - 16.8).

As a result, the indicator of the business cycle clock in August remained in the **upswing** area.

Business cycle clock

Business cycle clock is developed by Ifo institute demonstrates in which phase of the cycle the economy was in a certain period. To construct it the series of current conditions (X axis) and future conditions (Y axis) assessments are used.

Business climate index (BCI)

BCI* in economy

The **business climate index**, which is an average assessment of current and future business conditions, increased to **6.8** (from 5.2 in July) due to improvements in service and construction sectors.

The BCI turned out to be negative only in the mining industry, amounting to **(-)7.0** (in July - (-)5.3), in construction and the services sector, the indicator increased to **14.2** and **8.8** (from 11,5 and 4.6 in July), respectively. In the production sector, the indicator moved into the positive area amounting to **0.9** (in July - (-)0.5).

*BCI is geometrical mean of current situation assessment and expectation

$$BCI^* = \sqrt{(BA(SIT) + 200) * (BA(EXP) + 200)} - 200$$

where, BA – balance of answers
 SIT – current economic condition
 EXP – expected economic condition

Assessment of factors influencing business climate

Dynamics of factors, BA*

*Balance of answers (BA) is difference between positive and negative answers. If index is above 0 improvement, if below 0 – worsening.

In August 2022, according to the assessment of business conditions factors negative responses prevailed. As a result, the balance of responses between positive and negative responses for all factors turned out to be negative.

Despite the predominance of negative assessments, there was an improvement in the estimates of access to communications, tax burden and business protection issues to **(-)3.3**, **(-)4.2** and **(-)4.4**, respectively.

By sector, demand has decreased in the mining industry, where negative responses prevail significantly. In other sectors, according to the companies' estimates, demand in general has increased.

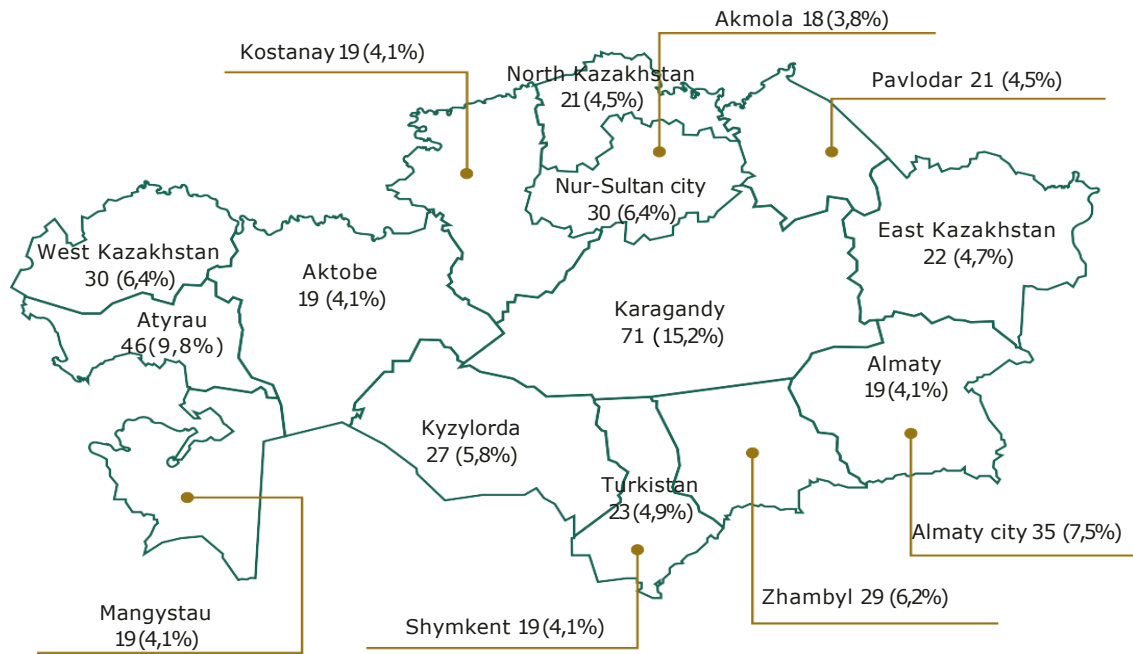

Assessment of factors in August 2022, share of answers in %

*The share of neutral (no change) answers are not presented

METHODOLOGICAL COMMENT

- ✓ The information was prepared based on the results of monthly surveys of enterprises participating in the monitoring of the real sector.
- ✓ To calculate the Business Activity Index, the diffusion index (DI) is used, which is calculated as the sum of positive responses share and half of the unchanged responses share. This index is a generalized indicator characterizing the dynamics of changes in the indicator.
- ✓ The data on the diagram are presented with the elimination of the seasonality factor (except for future condition and factors).
- ✓ Changes are possible in the previous months dynamics due to seasonal clearing and GVA adjustment.
- ✓ The Business Climate Index and Business Cycle Clock are constructed using the methodology of Ifo institute, Germany.
- ✓ In April 2022 mining industry was separated, hence the series were recalculated.
