

NATIONAL BANK OF KAZAKHSTAN

Kazakhstan: Balance of Payments and External Debt

For 2022

April 2023

This publication was prepared by the Balance of Payments Department. It reflects the latest developments in the external sector of the Republic of Kazakhstan and provides statistical reports on the balance of payments, international investment position and external debt of the country, as well as analytical commentaries to these reports. Statistical reports are supplemented by detailed analytical tables describing the methodology of external sector statistics and data sources for compilation. A separate statistical annex presents the structure of stocks and flows of international investment by type of investment. It is published on quarterly basis (in January, April, July and October) and available in three languages: Kazakh, Russian and English.

Adjustments to previously published historical data series are possible in case of the changes in accounting methodology of statistical data and (or) availability of additional information about foreign trade transactions. In accordance with the regulations, statistics of the external sector of the Republic of Kazakhstan is revised twice a year - during the compilation of reports on the balance of payments, international investment position and external debt for the half year and for the full year and covers the two years prior to the reporting. Updated data are published annually in May and November.

The main source for clarification of data is the emergence of additional information received at the time of compilation of the reports – the data obtained in the framework of registration and notification of foreign currency transactions, the identification of statistical discrepancies in reconciliation of data with others, except for statistical reporting on the balance of payments, data sources, as well as clarification of official trade statistics.

Due to rounding of data in separate cases in the tables provided in this publication, there may be minor differences in the last digit between totals and sum.

The date of compilation of statistical data for this publication is December 30, 2022. The date of the last update of data for the period 2017-2022 is March 31, 2022.

Additional information about the presentation of statistical data can be obtained from the Balance of Payments Department:

at the following address: Z05T8F6, Nur-Sultan city,district "Esil", avenue Mangilik El, building 57A
by phone: (727) 277-55-23 (balance of payment)
(727) 270-55-40 (international investment position and external debt)
by email: meruyert.nursadyk@nationalbank.kz

Statistical reports on the balance of payments, international investment position and gross external debt in standard and analytic representations, as well as a methodological commentary on the compilation of these reports are available on the website of the National Bank of Kazakhstan: <http://www.nationalbank.kz>. The specified statistical reports are published on the NBK's website on the 90th day after the end of the reporting period and are available in Kazakh, Russian and English languages.

II.4. On transition to the new methodology of external sector statistics	119
II.5. Correspondence between indicators of the External Debt and items of the International Investment Position of the Republic of Kazakhstan	122

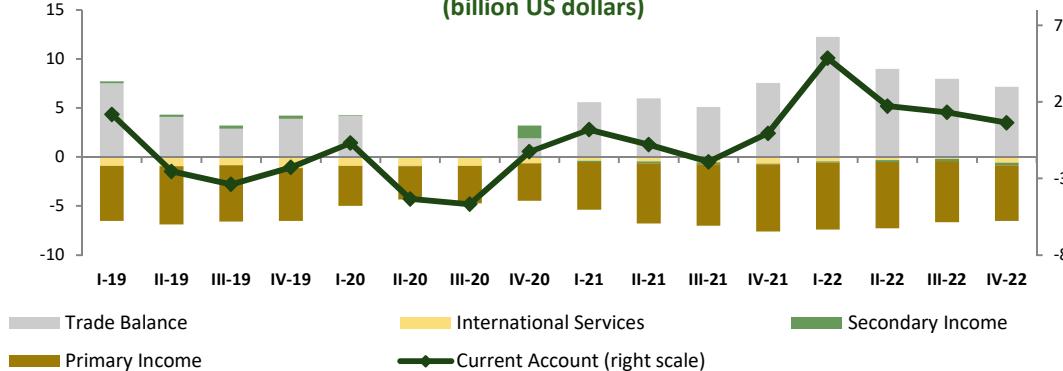

BALANCE OF PAYMENTS OF THE REPUBLIC OF KAZAKHSTAN for 2022

Current account

According to the results of 2022, the **current account** was in surplus and amounted to 8.5 billion US dollars (hereinafter – \$). In 2021, the current account deficit was \$2.6 billion (Appendix 2). The transition of the negative current account balance into a positive zone is associated with an improvement in the state of the trade balance (Figure 1).

The trade surplus increased by 50.1% to \$36.4 billion. The growth of the surplus is provided by the outpacing growth rate of exports of goods over the growth rate of imports.

**Figure 1. The main components of the current account
(billion US dollars)**

Exports of goods by BOP increased by 30.9% compared to the indicator of 2021 and amounted to \$86.1 billion. The value of oil and gas condensate exports (55.6% of official exports) increased by 50.9% or \$15.8 billion, due to an increase in contract prices by 52.1%. At the same time, world prices for Brent crude oil averaged \$99.8 per barrel in 2022, an increase of 41.7% compared to 2021 (\$70.4 per barrel on average in 2021).

Exports of ferrous metals increased by 11.8% and exports of non-ferrous metals by 10.5%. Grain exports increased by 34.1%.

Imports of goods under the BOP increased by 19.7% and amounted to \$49.8 billion. The increase in imports of goods is due to an increase in imports of intermediate goods by 19.7% or \$3.9 billion and non-food consumer goods by 33.1% or \$2.9 billion.

The deficit in the balance of *international services* decreased by 26.1% to \$1.5 billion compared to the indicator of 2021. The decrease in the deficit of the balance of services is due to an increase in exports of services by 34.6% and imports of services by 19.1%. Foreign trade turnover in international services increased by 25.7% and amounted to \$17.3 billion.

The deficit of the *primary income balance* increased by 5.6% relative to the indicator of 2021 and amounted to \$25.5 billion. The increase in the deficit was due to the growth of income of foreign direct investors.

Investment *income received* from investments increased by 64.7% compared to 2021 and amounted to \$3.4 billion. About half of these revenues are accounted for by revenues from the country's official reserves (reserve assets and foreign assets of the National Fund), which increased by 23.9% to \$1.2 billion.

Investment *income payable* to non-residents increased by 10.1% to \$27.8 billion, including non-residents' income from direct investments increased by 10.8% to \$25.3 billion. In the total amount of investment income to be paid, 39.1% is income from equity participation in the form of distributed income (and dividends) or in the form of a share of foreign direct investors in the retained earnings (or loss) of Kazakhstani enterprises (so-called reinvestments).

The deficit in the *balance of secondary income* amounted to \$836.7 million (a deficit of \$609.2 million for 2021). The deficit in the balance of secondary income is caused by transactions of individuals on money transfers.

Money transfers of individuals (personal transfers) abroad decreased by 24.8% and amounted to \$1.4 billion. The decrease was mainly due to transfers to the Russian Federation, Kyrgyzstan, Uzbekistan, and Armenia. Transfers to individuals from abroad increased by 55.7% to \$476.9 million, mainly due to an increase in receipts from the Russian Federation and the United States.

For public sector operations, the increase in Kazakhstan's payments to the budgets of the Union states against the background of a decrease in import customs duties from the EAEU states to the republican budget led to a deficit in the balance of transfer operations of public administration bodies of \$172.7 million.

The financial account (excluding operations with reserve assets of the National Bank)

Net outflow from the **financial account** (excluding reserve assets) for 2022 amounted to \$6.2 billion (in 2021, a net inflow of \$2.5 billion was recorded). A higher increase in residents' assets compared to the growth of their liabilities ensured net capital outflow or «net lending to other countries» for financial transactions.

Table 1

The balance of financial account (excluding reserve assets)

("+" – increase of assets/ liabilities; "-" – decrease of assets/liabilities)

millions of US dollars

	2020	2021	2022
Financial account	-12541,7	-2452,7	6191,5
<i>Net acquisition of financial assets</i>	-1815,6	10081,3	15174,0
Direct investments	1330,5	2653,3	-3009,0
Portfolio investment	-6340,2	-1214,9	10126,4
Other investment	3194,1	8642,9	8056,6
<i>Net incurrence of liabilities</i>	10726,1	12534,1	8982,5
Direct investment	7206,0	4549,0	4907,5
Portfolio investment	1332,5	2252,2	-3532,6
Other investment	2187,7	5732,9	7607,6

In the context of the sectors of the resident economy, net capital outflow (or net lending to other countries) for 2022 was provided mainly by the private sector (Table 2).

Table 2

Financial account balance (excluding reserve assets) by economic sectors

("+" – increase in assets/ liabilities; "-" – decrease in assets/liabilities)

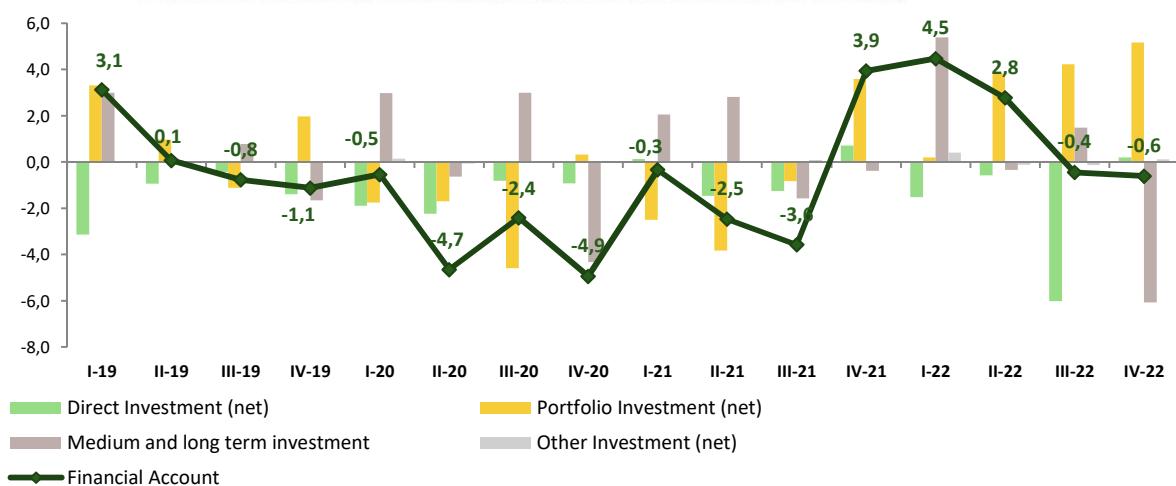

millions of US dollars

	2020	2021	2022
Financial account (excluding reserve assets)	-12541,7	-2452,7	6191,5
<i>Central Bank</i>	-401,9	-964,5	92,2

	2020	2021	2022
Net acquisition of financial assets	68,3	284,4	-143,2
Net incurrence of liabilities	470,2	1249,0	-235,4
<i>Banks</i>	-2112,8	861,3	-615,3
Net acquisition of financial assets	-1564,6	1835,3	1990,7
<i>including direct investment transactions</i>	0,1	177,7	53,0
Net incurrence of liabilities	548,3	974,0	2606,0
<i>including direct investment transactions</i>	369,0	290,5	-226,8
<i>General Government</i>	-8203,5	-8106,6	6930,0
Net acquisition of financial assets	-7454,4	-5412,3	6164,7
Net incurrence of liabilities	749,1	2694,4	-765,3
<i>Other sectors</i>	-1823,4	5757,2	-215,3
Net acquisition of financial assets	7135,1	13373,9	7161,8
<i>including direct investment transactions</i>	1073,0	2177,2	-3199,9
Net incurrence of liabilities	8958,6	7616,7	7377,2
<i>including direct investment transactions</i>	6837,0	4258,4	5134,2

In the structure of the financial account by type of investment, net capital inflow is registered for direct investments and other medium- and long-term investments, and net outflow of resources is registered for short-term and portfolio investments (Figure 2).

Figure 2. Structure of financial account (billions of US dollars)

Direct investments

Foreign direct investment (FDI) net capital inflow (negative balance) for 2022 amounted to \$7.6 billion (net inflow of \$2.6 billion for 2021) and was provided by an increase in resident liabilities (Table 3).

Table 3

Balance of direct investment

("+" – increase in assets/liabilities; "-" – decrease in assets/liabilities)

millions of US dollars

	2020	2021	2022
Direct investment (net)	-5875,4	-1895,6	-7916,5
<i>according to the "asset-liability principle"</i>			
net acquisition of financial assets	1 330,5	2 653,3	-3 009,0
Participation in the capital with the exception of	800,7	539,5	-1 208,8

	2020	2021	2022
reinvestment of income			
Reinvestment of earnings	-0,6	50,1	116,1
Debt instruments	530,4	2 063,8	-1 916,3
net incurrence of liabilities	7 206,0	4 549,0	4 907,5
Participation in the capital with the exception of reinvestment of income	285,7	727,7	-3 493,9
Reinvestment of earnings	4 988,0	9 679,4	9 941,7
Debt instruments	1 932,2	-5 858,1	-1 540,4
<i>according to the "directional principle"</i>			
direct investment abroad (net outflow)	-2 206	1 441	-1 808
direct investment to Kazakhstan (net inflow)	3 670	3 337	6 108
<i>Memo items:</i>			
gross inflow of FDI to Kazakhstan from foreign direct investors	17 155	23 803	28 012
gross outflow of FDI from Kazakhstan to abroad	1 432	2 548	4 246

There is a decrease in external assets under the article «*Net acquisition of financial assets*» for FDI operations of \$ 3.0 billion.

Net acceptance of obligations for FDI amounted to \$4.9 billion. The increase in the obligations of residents under the FDI is provided by the reinvestment of non-residents' income (retained earnings attributable to direct investors). The decrease in debt obligations to foreign affiliates partially offset the increase in FDI liabilities.

The gross inflow of foreign direct investment (FDI) to Kazakhstan increased by 17.7% compared to the indicator of 2021 and amounted to \$28.0 billion. Investments in the production of crude oil and natural gas (34.5% of the gross inflow of FDI in 2022) increased by 45.6% and amounted to \$9.7 billion. Investments of foreign direct investments in the metallurgical industry (14.3% of the gross inflow of FDI) decreased by 3.6% to \$4.0 billion, in wholesale and retail trade, repair of motor vehicles (18.15% of the gross inflow of FDI) increased by 36.0% to \$5.1 billion, in financial and insurance activities (2.3% of the gross inflow of IPI) decreased by 59.8% and amounted to \$0.6 billion, in transport and warehousing (4.1% of the gross inflow of FDI) increased by 13.5% to \$1.2 billion.

The structure of the gross inflow of FDI by country is dominated by the Netherlands (29.7% of the gross receipts of FDI), followed by the USA (18.2%), Switzerland (9.9%), Belgium (5.6%), the Russian Federation (5.4%), the Republic of Korea (South Korea) (5.3%), China (5.1%), France (2.7%) and the United Kingdom (2.4%).

Portfolio investments and derivative financial instruments

Net outflow of *portfolio investments* in 2022 of \$8.3 billion (in 2021 net inflow of \$7.2 billion) is due to a decrease in resident assets and their liabilities (Table 4).

Table 4

Debt securities	-303,3	266,6	-1029,3
<i>Government Agencies</i>	384,1	2064,9	-858,5
Debt securities	384,1	2064,9	-858,5
<i>Other sector</i>	858,8	325,8	-1132,7
Equity and investment fund shares (less than 10%)	905,9	66,0	54,7
Debt securities	-47,1	259,7	-1187,5
Balance of portfolio investment	-7743,9	-3573,0	13400,1

Financial assets for portfolio investments increased by \$13.4 billion, mainly due to operations in the portfolio of Government agencies and Other sectors.

Liabilities for portfolio investments decreased by \$3.2 billion, which is mainly due to operations of government agencies and other sectors.

On operations with derivative financial instruments, the positive balance amounted to \$258.9 million. (a positive balance of \$105.9 million in 2021). Transactions with derivative instruments were carried out by Kazakhstani banks and non-banking organizations, mainly hedging export receipts in foreign currency.

On operations with derivative financial instruments, the positive balance amounted to \$258.9 million (a positive balance of \$105.9 million in 2021). Transactions with derivative instruments were carried out by Kazakhstani banks and non-banking organizations, mainly hedging export receipts in foreign currency.

Other investments

For transactions registered under *Other investments*, the net outflow (positive balance) amounted to \$0.8 billion (in 2021, \$2.9 billion) as a result of the growth of residents' assets.

Financial assets under *Other investments* increased by \$8.1 billion (Table 5), mainly due to the growth of assets of banks, the National Fund of the Republic of Kazakhstan and Kazakhstani enterprises in foreign accounts.

Table 5

Net acquisition of financial assets by residents, reflected in the article "Other investments"

("+" – increase in assets/liabilities; "-" – decrease in assets/liabilities)

millions of US dollars

	2020	2021	2022
<i>Central Bank</i>	-189,2	-14,0	-281,2
Cash and deposits	1,2	-14,0	-281,2
Loans	-190,4	0,0	0,0
<i>Banks</i>	-859,1	371,3	1425,9

	2020	2021	2022
Cash and deposits	-911,7	114,7	1082,4

¹ GDP in US dollars or CAR for the relevant period is used for calculating the comparative parameters for the period.

² For calculation the relative parameters at the end of the period (except for the value at year-end period) is used GDP in US dollars for all four quarters preceding the reporting date, which is defined as the sum of quarterly GDP values in US dollars calculated on the corresponding average quarterly exchange rate. For calculation the parameters of the end of the year is used GDP in US dollars for the calendar year according to the data of the Bureau of National statistics of Agency for Strategic planning and reforms of the Republic of Kazakhstan (BNS ASPR RK) calculated at the average exchange rate for the year.

³ Data of the BNS ASPR RK. Operational data for 2022 was published on February 15, 2023

⁴ Information about GDP in USD for the calendar year is provided by BNS ASPR RK.

External trade and trade balance

The foreign trade turnover according to the balance of payments classification (taking into account amendments to official statistics and adjusting the cost of CIF imports to FOB prices) for 2022 amounted to \$135.9 billion, having increased by \$28.5 billion (by 26.6%) compared to 2021. Exports of goods increased by 30.9% to \$86.1 billion, imports increased by 19.7% to \$49.8 billion. The trade surplus increased to \$36.4 billion from \$24.2 billion in 2021 (Appendix I.3).

The indicator of the openness of the economy, calculated as the ratio of trade turnover to GDP, increased by 9.3 percentage points (hereinafter – p.p.) to 60.8% due to an increase in the share of exports in GDP by 7.6 p.p. and the share of imports by 1.7 p.p. (Table 1).

Table 1

Openness of the economy (as a percentage of GDP)

	2018	2019	2020	2021	2022
Export	34,1	32,0	27,8	30,5	38,2
Import	18,8	21,9	22,8	21,0	22,6
Trade turnover	52,8	53,8	50,5	51,5	60,8

The export of goods registered by official statistics amounted to \$84.4 billion in 2022, \$24.1 billion more than in 2021.

An increase of 1.9 p.p. in the share of mineral products in the total value of exports led to an increase in the commodity concentration of exports, the coefficient of which was 69.7% compared to 68.6% in 2021 (Appendix I.4). The increase in value occurred for all major export positions of Kazakhstan. The largest absolute increase in exports was recorded for oil and gas condensate by \$15.8 billion (50.9%) (Table 2).

Table 2

Commodity structure of exports of the Republic of Kazakhstan (according to the official statistics)

Commodity group	2021		2022	
	Value (in mln. of US dollars)	Ratio (in %)	Value (in mln. of US dollars)	Ratio (in %)
All commodities	60 321,0	100%	84 394,0	100%
Main nomenclature, including	55 345,0	91,8%	75 963,3	90,0%
Mineral commodities	39 759,6	65,9%	57 216,2	67,8%
Including oil and gas condensate	31 089,8	51,5%	46 919,6	55,6%
Ferrous metals	4 973,3	8,2%	5 562,0	6,6%
Nonferrous metals	6 012,4	10,0%	6 641,8	7,9%
Grain	1 659,9	2,8%	2 225,9	2,6%
Other commodities	4 976,0	8,2%	8 430,7	10,0%

Following world prices, the contract price of oil and gas condensate increased by 52.1% and amounted to \$719.6 per ton (\$473.2 in 2021). The quantitative export of oil and gas condensate decreased by 0.5 million tons, amounting to 65.2 million tons.

For the group of non-ferrous metals, the growth of world prices for aluminum and zinc by 9.4% and 15.9%, respectively, led to an increase in contract export prices for these products by 15.5%, 21.4%, respectively. Contract export prices for copper and lead increased by 0.6% and

22.6%, respectively. World prices for copper and lead show a decrease of 5.3% and 2.3%, accordingly.

The quantitative export of copper and lead increased by 14.2% and 9.9%, respectively, while the quantitative supply of aluminum and zinc decreased by 8.9% and 6.5%, respectively.

The leading position remains with copper, whose share in this group was 56.4% (54.2% in 2021). The value of copper exports amounted to \$3.7 billion (\$3.3 billion in 2021) (Appendix I.5).

In the group of ferrous metals, traditionally the leading positions are occupied by ferroalloys and rolled ferrous metals with a specific weight of 58.1% and 29.0%, respectively. The growth of exports in the group of ferrous metals by 11.8% (by \$588.6 billion) was due to an increase in the export of ferroalloys by \$950.6 million (by 41.7%) to 3.2 billion dollars, in particular due to a price increase of 43.8% from 1380.1 to 1984.5 dollars per ton. Exports of rolled ferrous metals decreased by 17.1% to \$1.6 billion mainly due to a price reduction by 13.2% from \$885.8 to \$768.7 per ton.

Imports of goods recorded by official statistics in 2022 amounted to \$50.0 billion, which is 20.8% (\$8.6 billion) higher than in 2021 (Table 3). The commodity concentration ratio of imports in 2022 was 34.7% (35.1% in 2021).

Table 3

Commodity structure of imports of the Republic of Kazakhstan
(imports in CIF prices according to official statistics)

Commodity group	2021		2022	
	Value (in mln. of US dollars)	Ratio (in %)	Value (in mln. of US dollars)	Ratio (in %)
All commodities	41 415,4	100%	50 043,6	100%
Consumer goods	12 482,3	30,1%	16 113,4	32,2%
Food products	3 578,4	8,6%	4 266,6	8,5%
Non-food products	8 903,9	21,5%	11 846,8	23,7%
Intermediate consumption of manufactured goods	19 990,3	48,3%	23 922,2	47,8%
Means of production	8 942,9	21,6%	10 008,0	20,0%

The largest absolute increase in the import nomenclature was noted for intermediate imports by 19.7% to \$23.9 billion.

The growth of intermediate consumption goods by \$3.9 billion was due to an increase in imports of bodies for motor vehicles by \$518.8 million (by 2.2 times), engines by \$223.7 million (by 2.1 times), copper ores and concentrates by \$210.4 million (3 times), oil products by 231.1 million dollars (by 41.6%), products for mills from ferrous metals by \$137.7 million (by 2.8 times), vaccines by \$118.2 million (by 100%).

In the structure of intermediate goods, which account for 47.8% of total imports, the largest share (3.9% or \$936.6 million of the cost of intermediate goods) is occupied by bodies, followed by: oil products in the amount of \$786.9 million with a share of 3.3%, engines (1.8% or \$427.5 million), ores and concentrates of lead (1.5% or \$369.9 million), ores and concentrates of precious metals (1.5% or \$360.3 million), copper ores and concentrates (1.3% or \$314.1 million).

An increase in consumer imports by \$3.6 billion (by 29.1%) due to an increase in non-food consumer goods by \$2.9 billion (by 33.1%) with an increase in food imports by \$688.2 million. dollars (19.2%).

In non-food imports, the import of clothing increased by \$787.5 million (by 90.0%) to \$1.7 billion, cars by \$477.9 million (by 35.7%) to 1.8 billion, pharmaceuticals by \$274.5 million (by 25.1%) up to \$1.4 million, telephones by \$262.9 million (by 34.1%) up to \$1.0 million.

In the structure of non-food imports, cars are traditionally in the lead with a share of 15.3% in the group, clothing (14.0%), medicines (11.6%), telephones (8.7%).

The growth of investment imports by \$1.1 billion was mainly due to an increase in the import of aircraft by \$398.8 billion (2 times), tractors by \$181.9 million (by 100%), switching devices, routers by \$127.0 million dollars (by 49.3%), x-ray equipment by \$66.2 million dollars (by 7.7 times), dump trucks by \$60.7 billion (by 57.7 %), equipment for filtering or cleaning gases by \$46.9 billion (by 65.1%).

In the structure of investment imports (20.0% of total imports), the largest share falls on aircraft (7.8% of investment goods or \$780.2 million), switching devices, routers (3.8% or \$384.7 million), digital data processing units (3.5% or \$346.8 million), wind turbines (2.2% or \$221.3 million), air pumps (2.0% or \$200.1 million).

The geographic structure of the ***external trade turnover*** registered by official statistics in 2022 was dominated by Asian countries - 36.4% in the volume of trade operations. The share of the CIS states amounted to 26.9%, including 21.1% accounted for by the countries of the Eurasian Economic Union (EAEU). European countries account for 32.3%. The share of the countries of the European Union (EU) was 29.8%. (Appendix I.6). In the context of individual countries, the first place is occupied by the Russian Federation (19.4% of the trade turnover), followed by China (18.0%), Italy (11.1%), and the Republic of Korea (4.6%). At the same time, Italy leads in terms of export volumes (16.4%), and Russia (34.7%) in terms of import volumes.

The trade turnover with ***the EU countries*** for 2022 amounted to \$40.0 billion, an increase of 38.3% compared to 2021 due to the growth in exports of goods to these countries.

Exports of goods to the EU countries in 2022 increased by 39.3% and amounted to \$32.4 billion, with mineral products accounting for almost 91.2% of exports. With an increase in the cost of importing goods from the EU countries by 34.4%, the volume of imports from the EU countries in 2022 amounted to \$7.6 billion.

According to official statistics, trade with the ***EAEU*** member countries for 2022 increased by 6.5% and amounted to \$28.3 billion, including almost \$26.1 billion is trade with the Russian Federation (RF).

Foreign trade turnover with ***the Russian Federation*** increased by 6.1% in 2022, while imports of goods amounted to \$17.3 billion (\$17.6 billion in 2021), and exports of goods amounted to \$8.8 billion (\$7.0 billion in 2021). With an increase in exports by 25.1% and a

decrease in imports by 1.5%, the negative trade balance with Russia decreased by 19.1%, amounting to \$8.6 billion.

Coverage adjustments. Trade turnover on trade transactions of individuals not registered by official statistics (the so-called «shuttle trade») was estimated for 2022 in the amount of \$926.5 million. With an increase in exports by 5.5 times and imports by 3.3 times, the turnover in unorganized trade increased by 3.8 times compared to 2021. The cost of exported goods is estimated at the level of \$275.0 million, and of imported goods - \$651.4 billion. The negative balance on unregistered trading operations of individuals amounted to \$376.4 million, having increased by 2.6 times compared to the previous year (Appendix I.3).

According to the reporting data of transport enterprises, the cost of purchasing fuel and food abroad (import) amounted to \$130.7 million dollars, similar costs of transport companies of non-residents in Kazakhstan (export) amounted to \$439.4 million dollars.

According to the reports of enterprises on operations related to the processing of goods, in the analyzed period, the cost of goods sent outside the republic amounted to \$324.6 million, and received from abroad about \$405.9 million.

Net export of goods as part of the resale of goods abroad in 2022 amounted to \$34.4 million. According to the reporting data of enterprises, goods were purchased abroad in the amount of \$963.2 million, and sold - in the amount of \$997.6 million.

In order to expand the coverage of balance of payments statistics on certain types of foreign economic transactions of individuals not included in the official statistics of international trade in goods, an assessment was made of the volume of cross-border electronic commerce and an assessment of the import of cars by the private sector from the EAEU countries.

Thus, the import of goods purchased by individuals through foreign international Internet sites (cross-border electronic commerce) was estimated in the reporting period at \$946.0 million. «Gray» import of cars by citizens of Kazakhstan from the EAEU countries was estimated in the reporting period at \$525.1 million.

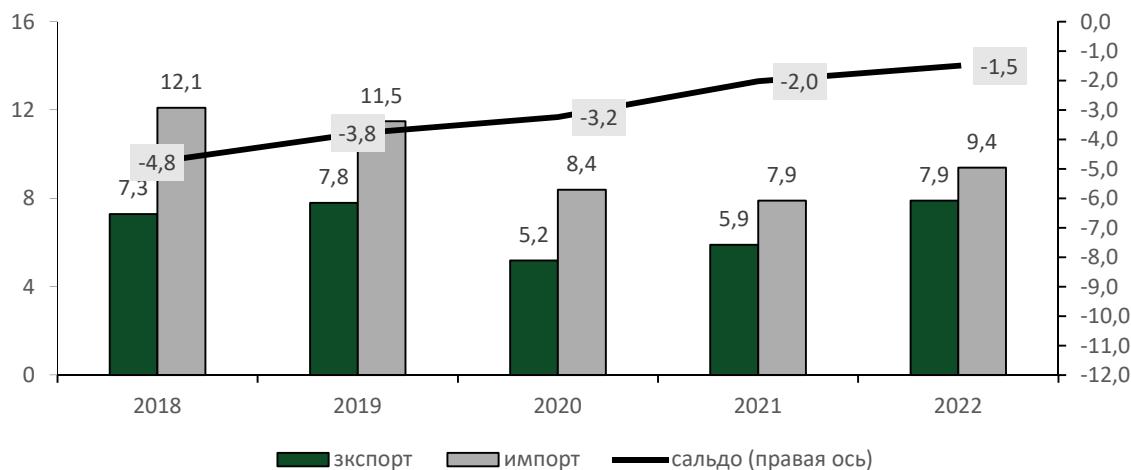

The data on exports of goods **were adjusted** for the amount of time lag in oil export statistics. There is a time lag of up to three months between the actual export of oil and its reflection in customs statistics. The revision of exports of goods according to the balance of payments methodology has been applied to the data since 2005.

By the end of 2022, **the trade surplus**, adjusted for coverage, classification (adjustment of the cost of CIF imports to FOB prices) and goods purchased by transport organizations in ports, amounted to \$36.4 billion, an increase of 50.1% (by \$12.1 billion) relative to the base period.

Balance of international services

The foreign trade turnover in services for 2022 amounted to \$17.3 billion, an increase of 25.7% compared to 2021. In 2021, the foreign trade turnover in services amounted to \$13.8 billion, with exports of services at \$5.9 billion and imports of services at \$7.9 billion (Figure 1).

Figure 1. Dynamics of foreign trade in services (billion US dollars)

In the reporting period, as a result of an increase in exports of services by 34.6% and an increase in imports of services by 19.1%, **the deficit in the balance of international services decreased by 26.1% compared to the base period (Table 1)**. As a result, the negative balance of services decreased to \$1.5 billion from \$2.0 billion.

Table 1

**Components of the balance of international services
(2022 vs. 2021)**

Services to individuals and services in the field of culture and recreation	0,81	0,61	-25.1%	150,24	186,47	24,1%
Government services	204,81	229,23	11.9%	144,29	151,53	5,0%

The deficit of foreign trade in services, as in previous years, is mainly due to the negative balance of *other business services* (-\$1.6 billion) and *travel* (-\$0.9 billion). A significant excess of imports over exports was also recorded under the items "Payment for the use of intellectual property" (-\$294.1 million), "Services for repair and maintenance" (-\$268.8 million), "Telecommunication, computer and information services" (-\$120.6 million). There was a significant surplus in transport services (\$2.0 billion).

Export of services for the reporting period amounted to \$7.9 billion, an increase of 34.6% or \$2035.8 million compared to the base period. The main dominant item of export of services is *transport services* (59.0% of the volume of exported services). Receipts for *cargo transportation services* amounted to \$3.8 billion, an increase of 10.2% relative to the indicator of the base period. Revenues of domestic transport companies from pipeline transit of oil and gas through the country, which account for 55.0% of the cost of all international cargo transportation, decreased by 3.0%. In addition, revenues of Kazakh companies engaged in the transportation of non-residents' goods by rail increased by 19.0% or by \$186.5 million.

Passenger transportation volumes increased by 59.1% from \$153.0 million to \$243.4 million.

The income of residents from the stay of foreign citizens in Kazakhstan increased by 145.1% and amounted to \$1.5 billion.

Import of services for the reporting period amounted to \$9.4 billion, an increase of 19.1% relative to the base period. The share of imports in Kazakhstan's foreign trade turnover in services decreased from 57.3% in the base period to 54.3% in the reporting period.

The predominant share in the import of services is the expenses of residents for the purchase of *transport services* (28.7%) and *services related to tourism* (25.8%), other business services (23.4% of total imports of services). In the structure of other business services, the largest expenses fall on architectural and engineering services (\$804.6 million or 36.6%).

Expenses of Kazakhstanis for *trips abroad* in the reporting period amounted to \$2.4 billion (in the base period - \$1.6 billion).

Non-residents' income from transport services amounted to \$2.7 billion, an increase of 37.5% or \$737.6 million, due to an increase in the transportation of goods by almost all modes of transport and other ancillary transport services.

Analytical tables on foreign trade in services by types of services by countries and by regions of the Republic of Kazakhstan are posted on the NBK's Internet resource in the balance of payments statistics section.

¹ The private sector also includes banks and other organizations with direct or indirect government participation

Methodological commentary

Financial operations include all transactions by the private sector registered in the financial account of the balance of payments, as well as errors and omissions.

The private sector includes all residents except for the Government of the Republic of Kazakhstan and the National Bank of Kazakhstan ("General government" and "Central bank" sectors in the balance of payments).

For the purposes of this table, net acquisition of assets recorded in the financial account of the balance of payments is shown with the opposite sign: an increase in assets is presented with a "minus" sign, whereas a decrease - with a "plus" sign. Accordingly, aggregates (The Private Sector financial operations, Banks, Other sectors, Transactions of the Government of the Republic of Kazakhstan and the National Bank of Kazakhstan, Financial account (excluding reserve assets)) are also presented with the opposite sign to that used in the balance of payments. Thus, outflow of capital includes transactions related to an increase in external assets or a reduction in external liabilities in this table. Inflow of capital is provided by an increase in external liabilities or a reduction in external assets.

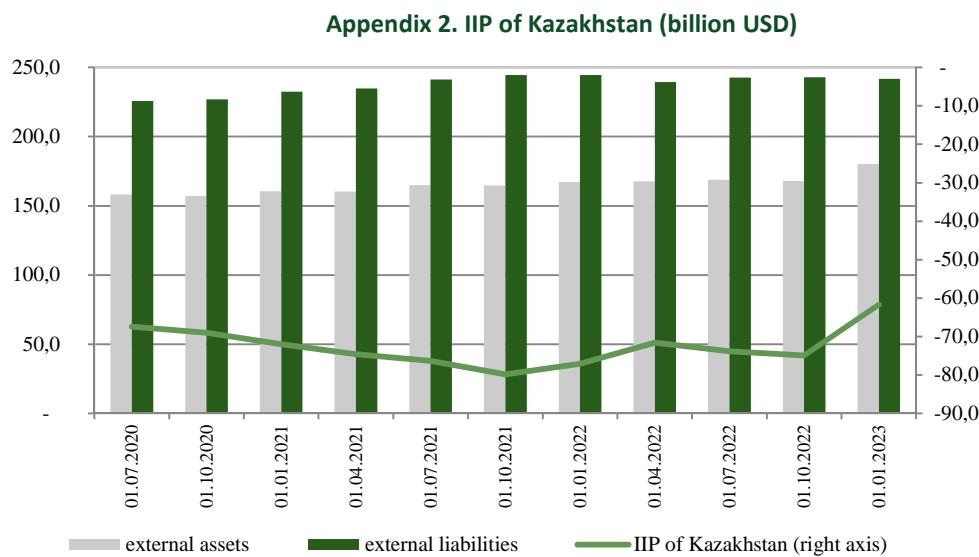

External assets include investments of residents in foreign stocks or debt securities, loans and credits granted by residents to nonresidents, receivables of residents from nonresidents, foreign currency belonging to residents, residents' accounts abroad and other assets.

External liabilities include investments of nonresidents in domestic stocks or debt securities, loans and credits granted by nonresidents to residents, payables of residents to non-residents, nonresidents' accounts in domestic banks and other liabilities.

Assuming that the errors and omissions in the balance of payments are mainly formed by the non-bank private sector transactions, this item is included in the calculation of net inflows/outflows of capital from other sectors.

**INTERNATIONAL INVESTMENT POSITION
OF THE REPUBLIC OF KAZAKHSTAN
as of Jan 1st, 2023**

Net International Investment Position (further – IIP) that is equal to the difference between stock positions of external assets and external liabilities as of Jan 1st, 2023 amounted to **(-) \$61.7 billion** (Diagram 2).

Net IIP shows a difference between what a country owns and what it owes to the rest of the world. As a result of a decrease in external liabilities with a significant increase in the volume of foreign assets of residents, net IIP for 2022 **improved by \$15.3 billion** (Appendix 3).

The increase in external assets for 2022 due to balance of payments transactions and revaluation (by \$19.8 billion and \$1.5 billion respectively) was partly offset by other changes (-\$8.6 billion). Decrease in liabilities was mainly due to revaluation and other changes (by \$7.7 billion and \$3.8 billion respectively), with an increase by \$9.0 billion due to operational changes (Table 1).

Table 1
Operational and other changes of IIP of Kazakhstan

	IIP, as of Jan 1 st , 2022	IIP changes for 2022			IIP as of Jan 1 st , 2023	Investment income for 2022

Other investment	46,1	7,6	0,1	-0,6	53,2	1,5
IIP of Kazakhstan	-77,1	10,9	9,3	-4,8	-61,7	

In the breakdown of IIP by Kazakhstan's economic sectors, as of Jan 1st, 2023 the Central bank and the General Government are characterized as 'net investors' to the rest of the world (Appendix 3).

A significant portion of external assets of the **General government** mainly contains foreign assets of the National Fund, which was equal to \$53.4 billion or 30% of the external assets of the country as of Jan 1st, 2023. The external assets of the Central Bank are mainly represented by reserve assets, the volume of which as of Jan 1st, 2023 amounted to U\$35.1 billion, or 19% of the country's external assets.

¹ net means assets minus liabilities² according to the asset/liability principle

³ financial derivatives in reserve assets of the National Bank of Kazakhstan and the National Fund of Kazakhstan are accounted according to the sixth edition of the Balance of Payments and International Investment Position Manual; therefore, these data in the IIP statistics can be slightly different than the data in other sources due to specific differences in methodology.

⁴ debt securities, issued according to the laws of other countries and on their territory, are presented by the country of trustee-nonresidents

⁵ Not determined by country:

- in assets and liabilities: financial derivatives ("Banks" sector);

- in liabilities: syndicate of foreign banks, from which attracted government loans (Ministry of Finance of Kazakhstan); non-residents' deposits and accounts in Kazakhstan banks;

- in reserve assets: monetary gold.

External liabilities of residents of Kazakhstan by types of their economic activity and the main countries

ACTIVITIES, N.E.C.	Z						

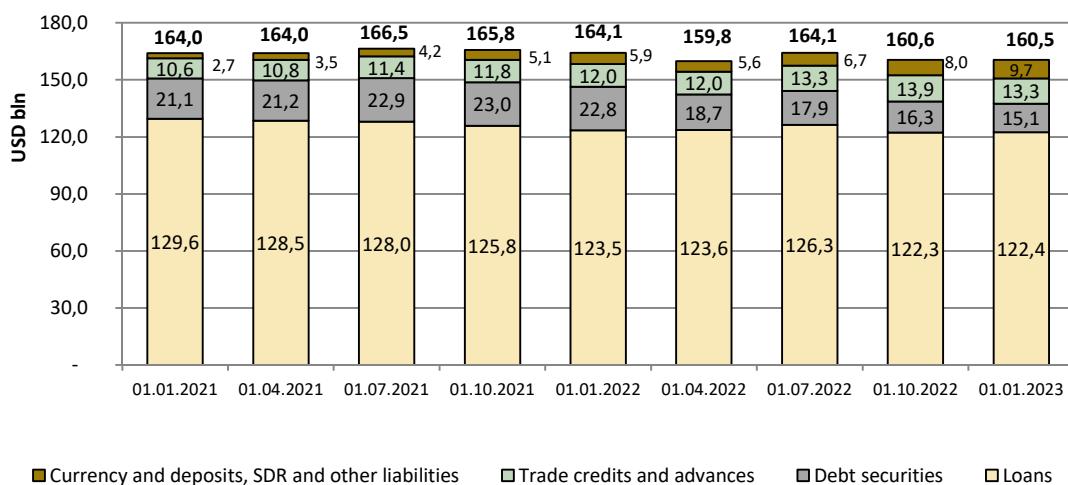

¹ according to the asset/liability principle² debt securities, issued according to the laws of other countries and on their territory, are presented by the country of trustee-nonresidents³ Other countries: also includes non-residents' deposits and accounts in Kazakhstan banks⁴ Other countries: also includes syndicate of foreign banks, from which attracted government loans (Ministry of Finance of Kazakhstan)

* includes geological exploration and prospecting activities

External debt of the Republic of Kazakhstan as of Jan 1, 2023

External debt of the Republic of Kazakhstan as of Jan 1, 2023 was equal to \$160.5 billion, of which: 9.7% or \$15.6 billion is the «Governmental sector» debt, 6.0% or \$9.7 billion – debt of «Banks» sector, 26.2% or \$42.1 billion is the debt of the «Other sectors», except direct investments, and other 58.0% or \$93.2 billion was Intercompany debt (Figure 1).

Figure 1. Instrumental breakdown of external debt

The external debt decreased by \$3.6 billion in 2022 (increase by \$135.9 million in 2021), due to cost and exchange rate changes with an increase in balance of payments operations.

The debt of the **«Governmental sector»** decreased by \$2.8 billion and equals to \$15.6 billion. The decrease in external public debt was due to a reduction in the obligations of the Ministry of Finance on securities held in the portfolio of non-residents (due to purchases of Eurobonds by Kazakh residents from non-residents, as well as due to cost changes of Eurobonds' price), the reduced demand of non-residents for short-term notes of the National Bank of the Republic of Kazakhstan, and by reducing liabilities on SDRs due to exchange rate fluctuations.

It also should be noted that the external debt of the public sector increased by \$0.6 billion compared to the previous quarter, which was due to an increase in government debt obligations due to loans received from international financial organizations (IFOs). The main increase is due to the attraction of a loan from the International Bank for Reconstruction and Development (IBRD) to finance the deficit of the Republican budget.

The debt of **«Banks» sector** increased by \$4.2 billion and equals to \$9.7 billion mainly due to attraction of short-term loans from non-residents and increase of non-residents' funds on accounts in Kazakhstani banks. The repayment, including early redemption, in the second and fourth quarters of 2022 of previously issued Eurobonds partially offset the increase in bank liabilities.

The external debt of «**Other sectors**» to unaffiliated creditors amounted to \$42.1 billion, decreased by \$1.9 billion since the beginning of the year mainly due to reduce of liabilities on securities (mainly due to cost changes and early repayment of Eurobonds). At the same time, in the reporting period, there was an increase in liabilities on loans (mainly metallurgy, chemical industry, pipeline transport companies, power generation) and trade credits and advances (wholesale trade enterprises, extractive and metallurgical enterprises), which partially offset the decline in debt in other sectors.

Intercompany debt decreased by \$3.1 billion to \$93.2 billion due to repayment of intergroup loans (from foreign direct investors and foreign fellow enterprises) by oil and gas companies, and transport and construction companies.

Favorable domestic economic conditions against the background of rising world prices in the commodity markets contributed to the growth of GDP and exports of goods and services. As a result, there was an improvement in the relative parameters of external debt: the ratio of external debt to GDP as of Jan 1, 2023 amounted to 72.6% (as of Jan 1, 2022 - 83.1%), and the ratio of external debt to exports of goods and services was 170. 6% (as of Jan 1, 2022 - 229.0%).

Net external debt of the Republic of Kazakhstan equals to \$50.0 billion as of Jan 1, 2023, which showed decrease by \$14.2 billion since the beginning of the year. At the same time, the public and financial sectors act as «net creditors» in relation to the rest of the world, and the corporate sector is a «net borrower».

Net external debt of «**Other sectors**» as of Jan 1, 2023 equaled to \$91.0 billion, decreased by \$5.9 billion since the beginning of the year. At the same time, in the structure of external debt obligations of other sectors, intercompany debt prevails, the volume of which amounted to \$93.2 billion or 38.5% of all external obligations of the country. In turn, 68.6% of intercompany debt consists of obligations related to the implementation by branches of foreign companies of large oil and gas projects in Kazakhstan, and is largely conditional in nature (non-cash repayment, dependence on oil prices, profitability, etc.).

External debt: standard presentation

Debt service schedule includes projected repayments of the principal on gross external debt outstanding on 01.01.2023 - row "Principal" and the projected future payments of interest - row "Interest", which will be accumulated by 31.12.2024 on the principal amount outstanding, taking into account its projected repayments

The "till called for" column includes:

"Central Bank", "Banks" - liabilities by correspondent and current accounts, call deposits of nonresidents and arrears

"Other sectors", "Direct investment: Intercompany lending" - arrears on debt securities, loans

The article "Other sectors" does not include Intercompany lending, which is presented as an independent article in the External Debt structure

The part of the external debt, on which National Bank does not have repayment schedule, is shown:

- the debt outstanding on long term trade credits and loans is included in the "no information" column;

- the short term debt outstanding on trade credits and loans is equally split between four consecutive quarter, following the reporting date (01.01.2023)

The line "For reference: Of these the repayment of external debt in the form of goods (works, services)" includes external obligations from export operations subject to repayment in the form of goods (works, services)

¹ Including foreign currency debt, source of information of which does not allow further breakdown of the debt by type of currency

The column "No information" shows the balance of external debt, on which the National Bank of Kazakhstan does not have information:

- In the General government sector - the debt on trade (commercial) loans given by non-residents
- In the Banks' sector - the column "No information" shows the amount of other liabilities to nonresidents, on which there is no information;
- In the Other sectors and intercompany lending - the column "No information" mainly contains information on the debt of residents on trade (commercial) loans to non-residents and other liabilities to nonresidents, on which no information is available.

¹as a result of fluctuations in price and exchange rate²changes in the value of assets that are neither to transactions nor revaluation, including those due to cancellation and write-offs, economic appearance and disappearance of assets, reclassifications, changes in financial volume arising from entities changing their economy of residence, as well as corrections of errors of previous periods

Appendix II.1

Methodological commentary to the balance of payments and the international investment position

The international accounts for an economy summarize the economic relationships between residents and nonresidents. They comprise the following¹: the balance of payments (BOP), International Investment Position (IIP), and other changes in financial assets and liabilities accounts.

The international accounts provide an integrated framework for the analysis of an economy's international economic relationships, including its international economic performance, exchange rate policy, reserves management, and external vulnerability.

From the first quarter of 2013, Kazakhstan's balance of payments, international investment position and external debt is compiled in accordance with the sixth edition of "Balance of Payments and International Investment Position Manual" (BPM6). The main changes are connected with transition to the new methodology compilation of statistics provided in the Appendix II.4.

Methodological commentary to the balance of payments

The balance of payments is a statement that summarizes economic transactions between residents and nonresidents during a period.

Compilation and evaluation of BOP is conducted based on the BPM6 in accordance with standard accounting rules and definitions.

Main BOP compilation rules and definitions:

- recording of transactions between residents and nonresidents;
- recording of transactions according to double-entry system;
- recording of flows rather than stocks;
- valuation of transactions and transfers denominated in different currencies in a single unit of account;
- recording of transactions at the time of the change of ownership;
- recording of transactions by type and by sector.

Residents and nonresidents. Each institutional unit is a resident of one and only one economic territory with which it has the strongest connection, expressed as its center of predominant economic interest. An institutional unit is resident in an economic territory when there exists, within the economic territory, some location, dwelling, place of production or other premises on which or from which the unit engages and intends to continue engaging, either indefinitely or over a finite but long period of time, in economic activities and transactions on a significant scale.

Flows refer to economic actions and effects of events within an accounting period. International flows are recorded in the accounts as transactions or other changes in financial assets and liabilities. Flows reflect the creation, transformation, exchange, transfer, or extinction of economic value; they involve changes in the volume, composition, or value of an institutional unit's assets and liabilities.

Double-entry system

A transaction is an interaction between two institutional units that occurs by mutual agreement or through the operation of the law and involves an exchange of value or a transfer.

¹ External debt is often attributed to the external sector statistics. Standard report on external debt is a structural part of the IIP, but due to its important analytical value, the external debt is usually regarded as a separate component of the external sector statistics

Each transaction involves two entries – a credit and a debit entry – for each party to the transaction. This principle ensures that the total of all credit entries and that of all debit entries for all transactions are equal, thus permitting a check on consistency of accounts for a single unit.

In the current and capital accounts, a credit denotes entries from exports, primary income receivable, transfers receivable, and disposals of nonproduced nonfinancial assets. A debit is used to record entries for imports, primary income payable, transfers payable and acquisitions of nonproduced nonfinancial assets.

In the case of transactions in financial assets and liabilities, the terms “net acquisition of financial assets” and “net incurrence of liabilities” are used. The interpretation of increase (decrease) under the credit or debit notion depends on whether the increase (decrease) refers to assets or liabilities (a debit for an asset is an increase, a debit for a liability is a decrease).

In accordance with the double-entry basis of BOP statistics, each transaction is recorded as consisting of two entries where the sum of credit entries equals the sum of debit entries.

Transactions registration time is determined according to the accrual basis. Transactions are registered at the time when economic value is created, transformed, exchanged, transferred or extinguished. The emergence of financial claims and liabilities is associated with the change of ownership right for any resources from one party of an international transaction to another. Such a transition can be legalized, and may involve the actual transfer of resources or establishment of control over these resources by the other party. In the case of non-obvious transition of economic ownership right, the transition is considered to occur when parties of the transaction record it in their books or accounts.

Changes in the volume of assets and liabilities that occur as a result of transactions are recorded in the BOP. The BOP transactions involve both transactions that are accompanied by actual payments and those that do not involve cash payments.

Valuation of transactions. Transactions are valued at their actual market price recorded in contracts and agreements between independent parties of the transaction.

International accounts are formed for the following sectors: the central bank, banks (deposit-taking corporations except the central bank), general government, and other sectors including other financial corporations and nonfinancial corporations, households and nonprofit institutions serving households (NPISHs). Classification and sectorization systems meet international standards.

Main BOP accounts

Standard BOP structure consists of the following accounts: the current account (the goods and services, the primary income, the secondary income), the capital account and the financial account.

The current account shows flows of goods, services, primary income, and secondary income between residents and nonresidents. The current account balance shows the difference between the sum of exports and income receivable and the sum of imports and income payable (exports and imports refer to both goods and services, while income refers to both primary and secondary income).

The current account and capital account exclude the use of a "minus" sign while showing imports of goods and services as well as primary and secondary incomes paid. At the same time, the balance of relevant accounts (goods, services, primary income and secondary income) is defined as the difference between the credit and the debit entries.

Current account:

Main components of the “**Goods**” account are export and import of goods on a balance of payments basis, net exports of goods under merchanting, nonmonetary gold.

Nonmonetary gold covers all gold other than monetary gold. In its turn, monetary gold is a financial asset that is not created by an instrument and that does not represent a claim on another entity and acts as a means of international payments and store of value for use in reserve assets.

Export and import of general merchandise on a balance of payments basis covers goods (as well as re-export), whose economic ownership is changed between a resident and a nonresident and that are not included in the following specific categories: goods under merchanting, nonmonetary gold, parts of travel, construction, and government goods and services not included elsewhere.

Re-exports are foreign goods (goods produced in other economies and previously imported) that are exported with no substantial transformation from the state in which they were previously imported.

Merchanting is defined as the purchase of goods by a resident (of the compiling economy) from a nonresident combined with the subsequent resale of the same goods to another nonresident without the goods being present in the compiling economy.

The difference between sales over purchases of goods for merchanting is shown as the item "net exports of goods under merchanting". As a result of losses or increases in inventories, net exports of goods under merchanting may be negative in some cases.

Nonmonetary gold in the form of bullion or other forms is shown as a separate article in the goods.

Services cover the services that are performed by residents for nonresidents and vice versa. The following types of services are included in the BOP: manufacturing services on physical inputs owned by others; maintenance and repair services; transport (including postal and courier services); travel; construction; insurance and pension services; financial services; charges for the use of intellectual property not included elsewhere; telecommunications; computer and information services; other business services; personal, cultural, and recreational services; government goods and services not included elsewhere.

In accordance with the balance of payments basis, the time of recording of service entries in the international accounts is the time at which the service is delivered. The provision of services should be recorded on an accrual basis in each accounting period, i.e. they should be recorded as they are rendered. To the extent that the time of payment differs from the time of delivery, there may be trade advances (financial assets and liabilities that are extinguished as the service is provided) or trade credits (financial assets and liabilities that arise as the service is provided).

Primary income includes compensation of employees, investment income and other primary income.

Compensation of employees presents remuneration in return for the labor input to the production process contributed by an individual in an employer-employee relationship with the enterprise. In international accounts compensation of employees is recorded when the employer and the employee are resident in different economies.

Compensation of employees has three main components:

- 1) wages and salaries in cash;
- 2) wages and salaries in kind;
- 3) employers' social contributions.

Investment income is the return for providing financial assets, including dividends, reinvested earnings and interest, that is, income from direct, portfolio, other investments and reserve assets.

Dividends are distributed earnings allocated to the owners of equity for placing funds at the disposal of the corporation.

Reinvested earnings represent the direct investor's proportion, in terms of equity held, of the earnings that foreign subsidiaries and associates do not distribute as dividends. In some cases reinvested earnings can be negative, for example, when a direct investment enterprise experiences a loss or when the dividends payable in a period exceed the net income in that period. Similar to positive reinvested earnings that are treated as a capital injection in the direct investment enterprise

by the direct investor, negative reinvested earnings are considered to be a withdrawal of funds from the capital.

Interest is a form of investment income that is receivable by the owners of certain kinds of financial assets namely deposits, debt securities, loans, and other accounts receivable and payable for putting the financial asset at the disposal of another institutional unit. Interest is recorded on an accrual basis, that is, interest is recorded as accruing continuously over time to the creditor on the amount outstanding.

Investment income attributable to policy-holders in insurance, standardized guarantees, and pension funds represents returns to policyholders on their claims in insurance and standardized guarantee schemes in the form of technical reserves and income payable on pension entitlements.

Other primary income includes taxes on production and imports, subsidies and rent.

Secondary income account shows current transfers between residents and nonresidents. Current transfers represent compensating entries that correspond to the provision of a good, service, financial asset or another nonproduced asset when there is no corresponding return of an item of economic value. This article covers grants, humanitarian and technical aid, government contributions to various international and intergovernmental organizations, taxes and personal transfers. Current transfers are classified according to institutional sectors making or receiving transfers. The balance on the secondary income account presents total receipts less total payments.

Capital account

Capital account covers any international transactions with nonproduced, nonfinancial assets and capital transfers between residents and nonresidents. Nonproduced, nonfinancial assets consist of natural resources, contracts, leases, licenses and marketing assets.

Capital transfers are transfers in which the ownership of an asset (other than cash or inventories) changes from one party to another or which obliges one or both parties to acquire and dispose of an asset (other than cash or inventories) or where a liability is forgiven by the creditor.

Financial account

The financial account records transactions that involve financial assets and liabilities and that take place between residents and nonresidents.

The financial account indicates the functional categories, sectors, instruments and maturities used for net international financing transactions. Flows in financial assets and liabilities in international accounts are recorded on net basis. Change in external debt as a result of the revaluation of assets and liabilities in the financial account is not recorded. Entries in the financial account can be corresponding entries to goods, services, income, capital account and other financial account entries.

In the financial account the terms “net acquisition of financial assets” and “net incurrence of liabilities” are used instead of “assets” and “liabilities”. If there is an increase of assets or liabilities, it is shown with a “plus” sign; if there is a decrease in assets or liabilities, it’s shown with a “minus” sign. The balance on the financial account is defined as the difference between assets and liabilities.

Financial assets consist of claims of residents on nonresidents and “gold bullion” component under monetary gold.

A claim is a financial instrument that gives rise to an economic asset, which corresponds to a balancing obligation.

In the financial account assets and liabilities are classified by their functional category by the following main components: direct investment, portfolio investment, financial derivatives and stock options for employees, other investments and reserve assets.

Direct investment is a category of cross-border investment associated with a resident in one economy having control or a significant degree of influence on the management of an enterprise that is resident in another economy (owns equity that entitles it to 10 percent or more of the voting power in the management of the direct investment enterprise). Direct investment is classified as

investment by a direct investor in its direct investment enterprise, return investment by a direct investment enterprise in its own immediate or indirect direct investor, or investment between resident and nonresident fellow enterprises.

Direct investment transactions according to the type of financial instrument are divided into equity and investment fund shares, reinvestment of earnings and debt instruments.

Return investment arises when a direct investment enterprise lends funds to or acquires equity in its immediate or indirect direct investor provided it does not own equity comprising 10 percent or more of the voting power in that direct investor.

Fellow enterprises are enterprises that are under the control or influence of the same immediate or indirect investor but neither fellow enterprise controls or influences the other fellow enterprise.

Portfolio investments include transactions involving debt or equity securities other than those included in direct investment or reserve assets.

Financial derivatives and employees stock options are financial instruments that are linked to another specific (base) instrument and through which specific financial risks (interest rate and foreign exchange risk, equity and commodity price risk, credit risk, etc.) can be traded in their own right in financial markets. Derivative financial instruments are classified into forward-type contracts and options.

Other investment includes other equity, currency and deposits, loans, insurance and pension programs, standardized guarantee programs, trade credit and advances, other accounts receivable and payable, SDR allocations.

Other equity is included in other investments when it is not direct investment or reserve assets. Other equity is not in the form of securities, so it is not included in portfolio investments.

Reserve assets are external assets that are readily available to and controlled by monetary authorities for meeting the balance of payments financing needs, for intervention in exchange markets to influence the currency exchange rate and for other related purposes (such as maintaining confidence in the currency and the economy, and serving as a basis for foreign borrowing).

The imbalance in the balance of payments account is called **net errors and omissions**. Net errors and omissions are derived residually as net lending/net borrowing and can be derived from the financial account minus the same item derived from the current and capital accounts.

The balance of payments has standard and analytic presentation. The standard presentation groups international transactions with goods, services, income and financial values consistent with the SNA and other macroeconomic statistics as a result of which the balance between transactions equals zero.

The analytic presentation is a reorganization of the standard presentation of balance of payments statistics to facilitate a basic distinction between reserves and closely related items and other transactions.

Methodological commentary to the international investment position

The international investment position (IIP) is a statistical statement that shows at a point in time the value and composition of:

financial assets of residents of an economy that are claims on nonresidents and gold bullion held as reserve assets;

liabilities of residents of an economy to nonresidents.

The difference between an economy's external financial assets and liabilities is the economy's net IIP, which may be positive or negative.

IIP consists of direct investment, portfolio investment, financial derivatives and employees stock options, other investment, and reserve assets.

The values in the IIP at the end of the period result from transactions and other flows in the current and previous periods. The integrated IIP statement consists of the IIP, the financial account and the other changes in financial assets and liabilities.

Other flows are changes in the volume, value, or classification of an asset or liability that do not result from a transaction between a resident and a nonresident. Other flows cover various kinds of changes in assets and liabilities that are recognized analytically under two broad types:

- 1) other changes in the volume of assets and liabilities reflect entrances of new assets into balance sheets and exits of existing assets and liabilities from balance sheets that are not caused by interactions by mutual agreement between institutional units (i.e.transactions)
- 2) revaluations (holding gains and losses) on an asset or liability arise from changes in their prices and/or the exchange rates.

IIP is compiled on the basis of BPM6. Methodological approaches to the compilation of the IIP and BOP completely coincide.

IIP and BOP compilation practices

Statistical reports on transactions with financial assets and liabilities serve as source data for the compilation of international accounts (BOP, IIP, external debt). Reports submitted by respondents are checked and revised according to the National Bank's results of registration and notification of foreign exchange transactions involving the movement of capital, as well as information from banks and professional participants of the securities market.

Appendix II.3

Calculating principles of analytical indexes and the balance of payments estimating items

1. Methodological principles for assessing the volume of "shuttle" trade

"Shuttle trade" includes value of the goods not registered by official customs statistics, which were purchased by individuals for commercial purposes (subsequent resale). The National Bank of Kazakhstan estimates such transactions to include them in the articles of the trade balance as an adjustment on coverage.

"Shuttle trade" transactions mainly occur with contiguous countries, therefore new estimated parameters for "shuttle trade" were calculated for following countries – Russia, Kyrgyzstan, Uzbekistan and China. New estimated parameters have taken into account changes in economic factors from 2012 (exchange rate, real income, purchasing power).

The total estimate of the imported and exported "shuttle trade" is calculated as the product of the number of "shuttle traders" and the average cost of their imported and exported goods.

Based on the raw data received from Border Service of the National Security Committee of the Republic of Kazakhstan on a number of individuals crossing the border for private purposes by country, total number of "shuttle traders" is calculated using certain weights. Crossing the border for private purposes implies travel as a tourist or private trips and doesn't include business trips.

Evaluation of the goods purchased during foreign travel with the purpose of subsequent resale is made within amounts that are free of duty for individuals crossing the border predominantly on foot or by car. Norms for the movement of goods for personal use which are exempted from customs duties do not apply to EAEU countries. Among the neighboring countries these norms apply to Uzbekistan and China.

New estimated parameters for "shuttle trade" were applied to the data starting from the first quarter of 2012 which was when current norms for the movement of goods for personal use were introduced.

Calculated shuttle trade parameters for trade with Russia estimate:

- for ***shuttle trade exports*** – share of "shuttle traders" in the total number of citizens of Russia arriving to Kazakhstan by car or on foot for private purposes and the average value of goods for one "shuttle trader" - citizen of Russia in US dollars;
- share of "shuttle traders" in the total number of citizens of Kazakhstan arriving to Russia by car or on foot for private purposes and the average value of goods for one "shuttle trader" - citizen of Kazakhstan in US dollars;
- for ***shuttle trade imports*** – share of "shuttle traders" in the total number of citizens of Kazakhstan arriving to Russia by car or on foot for private purposes and the average value of goods for one "shuttle trader" - citizen of Kazakhstan in US dollars.

Calculated shuttle trade parameters for trade with Kyrgyzstan estimate:

- for ***shuttle trade exports*** – share of "shuttle traders" in the total number of citizens of Kyrgyzstan arriving to Kazakhstan by car or on foot for private purposes and the average value of goods for one "shuttle trader" - citizen of Kyrgyzstan in US dollars;

- for ***shuttle trade imports*** – share of "shuttle traders" in the total number of citizens of Kazakhstan arriving to Kyrgyzstan by car or on foot for private purposes and the average value of goods for one "shuttle trader" - citizen of Kazakhstan in US dollars;

- share of "shuttle traders" in the total number of citizens of Kyrgyzstan arriving to Kazakhstan by car or on foot for private purposes and the average value of goods for one "shuttle trader" - citizen of Kyrgyzstan in US dollars.

Calculated shuttle trade parameters for trade with Uzbekistan estimate:

- for ***shuttle trade exports*** – share of "shuttle traders" in the total number of citizens of Uzbekistan arriving to Kazakhstan by car or on foot for private purposes and the average value of goods for one "shuttle trader" - citizen of Uzbekistan in US dollars;

- for ***shuttle trade imports*** – share of "shuttle traders" in the total number of citizens of Kazakhstan arriving to Uzbekistan by car or on foot for private purposes and the average value of goods for one "shuttle trader" - citizen of Kazakhstan in US dollars;

- share of "shuttle traders" in the total number of citizens of Uzbekistan arriving to Kazakhstan by car or on foot for private purposes and the average value of goods for one "shuttle trader" - citizen of Uzbekistan in US dollars.

Calculated shuttle trade parameters for trade with China estimate:

- share of "shuttle traders" in the total number of citizens of Kazakhstan arriving to «The International Center for Cross-Border Cooperation» Khorgos» for private purposes and the average value of goods for one "shuttle trader" - citizen of Kazakhstan in US dollars;

- share of "shuttle traders" in the total number of citizens of Kazakhstan arriving to China by car for private purposes and the average value of goods for one "shuttle trader" - citizen of Kazakhstan in US dollars;

- share of "shuttle traders" in the total number of citizens of China arriving to Kazakhstan by car for private purposes and the average value of goods for one "shuttle trader" - citizen of China in US dollars.

2. Methodological principles for estimating the value of imports in FOB prices and the calculation of transport costs during exports and imports of goods

Data generated on the basis of customs freight declarations of official statistics on the import of goods reflect the value of the goods at the customs border of Kazakhstan. That is, during an import of goods from countries that do not have a common border with Kazakhstan, the customs value of imported good in addition to the value of the good at the customs border of the importer (FOB-type valuation) includes the cost of insurance and freight transportation to the border of Kazakhstan (CIF-type valuation).

In the balance of payments the values of exports and imports of goods are recorded in the FOB-type prices (loading goods at the expense of the buyer) at the customs border of the seller of the goods, while the costs of insurance and freight transportation are reflected in the relevant articles of the balance of international services. Therefore, in order to accurately reflect the data in the balance of payments, a correction to the classification is introduced in the customs statistics data on import of goods - the costs of insurance and transportation, which are already included in the import of international services in the "insurance services" and "freight transportation" articles, are deducted from the CIF-type value of imports.

The sources for determining the share of the cost on insurance and freight transportation in the cost of imported goods are specialized surveys of exporters and importers which are held by the National Bank on an annual basis. On the basis of the survey results for 2002-2004. ("Questionnaire survey of enterprises on the costs of transportation and insurance during exports and imports of goods" as a form of statistical report was introduced in 2002) average estimated coefficients for recalculation of imports of goods from CIF prices to FOB prices and calculation of freight services by mode of transport were obtained. The coefficients were estimated across border countries and other countries.

In order to obtain comparable analytically significant amount of data on trade in goods and services, as well as to ensure the formation of the balance of services by expanded classification (introduced by the International Monetary Fund in 2000), new estimated coefficients derived in 2004 were applied to the balance of payments data starting with 2000.

According to the results of specialized surveys subsequent revisions of estimated coefficients will be made if the survey data differs significantly from the average of the coefficients (for example, when new methods and routes of freight transportation appear). During revisions of the coefficients the principle of averaging data for periods that are characterized by the changes will be retained.

3. Methodological principles for estimating exports and imports of international services under the "Travel"

In accordance with the methodology of the balance of payments, the article "Travel" covers primarily the goods and services that are acquired in this country by visitors (non-residents in Kazakhstan, residents abroad) if their term of stay does not exceed one year. The amount recorded in the balance of payments under this article represents estimation of cost of expenses of visitors on acquisition of goods and services in the country of residence. This group doesn't include the transportation of passengers in international traffic (ticket price) which are accounted for in the article "Services: Passenger".

Exports/imports of services under the "Travel" are calculated as the product of the average expenditure on a single trip and the number of citizens of Kazakhstan exiting the country/number of foreign citizens entering Kazakhstan.

The Border Service of Kazakhstan National Security Committee provides the initial information on the number of the exiting/the entering by citizenship, purpose of travel and countries.

The average expenditure per travel estimation is based on following sources of information:

- norms established in Kazakhstan for expense reimbursement for business trips to foreign countries;

- norms of travel expenses of the employees from foreign countries on business trips to Kazakhstan;

- norms for the movement of goods for personal use;

- results of sample surveys conducted by Committee on Statistics of Ministry of National Economy of the Republic of Kazakhstan on expenditures of individuals entering Kazakhstan and expenditures of resident households abroad;

- information found on the internet from tour operators about tour pricing to foreign countries and to Kazakhstan.

Based on information extracted from these data sources average expenditure per travel trip by travel purpose (work, tourism, private), country, types of transport and length of stay is calculated.

These new estimated parameters for the calculation of the article "Travel" are applied from the 1st quarter of 2012.

4. Methodological principles for estimating "Personal transfers"

According to methodology of the balance of payments, "Personal transfers" consist of all current transfers made or received by resident households to or from nonresident households. Personal transfers thus include all current transfers between resident and nonresident individuals independently of the source of income of the sending household or the relationship between the households. So, although it is recognized that personal transfers will often originate from migrants sending resources to support their relatives in their economy of origin, personal transfers as defined in the balance of payments methodology are not limited to such activity.

"Personal transfers" article of the balance of payments of Kazakhstan is formed according to the banking statistics data on international money transfers of individuals by their residency, sender/recipient country and purposes of transfer. At the same time bank statements do not contain information about the origin of these funds and the senders' citizenship. Taking into account the flow of funds as payments for purchased goods and services (considering country distribution of personal transfers) in the reporting data on non-repayable money transfers, estimates of the share of non-repayable workers' remittances of individuals in the total amount of personal transfers that are classified by senders as non-repayable are conducted. Thus, under this article the cross-border non-repayable transfers of individuals according to bank statistics data are taken into account with the estimates of the National Bank.

Methodological approaches to this estimation were updated according to the results of the anonymous survey of senders and recipients of transfers which was conducted with Kazakhstani banks' participation in late 2013 – early 2014. Based on the results of the survey new averaged coefficients to estimate the share of non-repayable transfers were obtained. These coefficients were estimated by countries, by direction (from Kazakhstan/to Kazakhstan), by methods (using a bank account and through international money transfer systems) and by volume (less than US\$ 10,000 or more).

New coefficients for the calculation of the article "Personal transfers" are applied from the 1st quarter of 2012.

5. Principles for calculating net inflows/outflows of capital by the private sector

Net inflows/outflows of capital include all transactions by the private sector registered in the financial account of the balance of payments, as well as errors and omissions.

The private sector includes all residents except for the Government of the Republic of Kazakhstan and the National Bank of Kazakhstan ("General government" and "Central bank" sectors in the balance of payments).

For the purposes of this table, net acquisition of assets recorded in the financial account of the balance of payments is shown with the opposite sign: an increase in assets is presented with a "minus" sign, whereas a decrease - with a "plus" sign. Accordingly, aggregates (Net inflows/outflows of capital, Banks, Other sectors, Transactions of the Government sector, Financial account (excluding reserve assets)) are also presented with the opposite sign to that used in the balance of payments. Thus, outflow of capital includes transactions related to an increase in external assets or a decrease

in external liabilities in this table. Inflow of capital is provided by an increase in external liabilities or a decrease in external assets.

External assets include investments of residents in foreign stocks or debt securities, loans and credits granted by residents to nonresidents, receivables of residents from nonresidents, foreign currency belonging to residents, residents' accounts abroad and other assets.

External liabilities include investments of nonresidents in domestic stocks or debt securities, loans and credits granted by nonresidents to residents, payables of residents to nonresidents, nonresidents' accounts in domestic banks and other liabilities.

Assuming that the errors and omissions in the balance of payments are mainly formed by the non-bank private sector transactions, this item is included in the calculation of net inflows/outflows of capital from other sectors.

6. Methodological principles of evaluation cross-border e-commerce

According to the balance of payments methodology, e-commerce is the ordering or delivery of products, at least in part, by electronic means, such as the Internet or other computer-assisted networks. «Goods in e-commerce» refers to goods that are physically moved across national borders in transactions that are wholly or in large part conducted by electronic means.

Cross-border electronic commerce of individuals is classified in the balance of payments under the item «Goods». This category of goods is transported across the border, but is not registered by the customs service and, accordingly, is not taken into account in the statistics of foreign trade in goods (IMTS), since most of them do not exceed the thresholds for imposing customs duties.

The assessment of the cost of cross-border electronic commerce of individuals is based on information provided by second-tier banks on the number and volume of transactions for non-cash payments using payment cards with the following parameters:

- type of operation: payment for goods and intangible assets;
- environment: Internet resource and mobile application;
- transaction attribute: payments made in a foreign acquiring system.

To calculate the share of goods in online payments, a sample survey of large banks was conducted based on data for 2021. The data array was presented with the allocation of transactions of payment cards of individuals by MCC codes which makes it possible to determine the type of activity of the outlet in the transaction of payment for goods or services. On the basis of these data sources the classification of Internet payments was carried out and the share of the category «goods» was derived.

Export/import of goods in the framework of cross-border e-commerce is estimated by the share of goods in online payments, superimposed on the entire population of online payments according to bank statements. The export flow of these operations is insignificant.

Evaluation of import operations on cross-border e-commerce has been made since the 1st quarter of 2015. More detailed information on the methodology for assessing cross-border e-commerce can be obtained in the working article «Recording of cross-border e-commerce in balance of payments statistics», posted on the NBRK website in the «Press Center and Research» section.

7. Methodology for calculating gray imports of passenger cars

In accordance with the methodology of the balance of payments, international merchandise trade statistics (IMTS) is the main source of data on exports/imports of goods in the goods account of the balance of payments. IMTS data need to be adjusted to take into account any goods for which there has been a change of ownership, but which are not reflected in the official IMTS sources. These goods include the purchase and import into the country of residence of the owner of durable goods such as cars.

This category does not fall into official statistics due to the absence of customs duties within the EAEU and due to the inability of the BNS to impose statistical reporting on individuals. The free movement of goods within the EAEU countries allows citizens of the union to import goods for personal use without administrative formalities. Residents of Kazakhstan satisfy part of their consumer demand for cars in the markets of allied countries (Russia, Armenia, Kyrgyzstan). A complete accounting of these flows in the conditions of an economic union is difficult.

Estimation of imports by private individuals-residents of cars with foreign registration numbers was carried out on the basis of information from the Unified Insurance Database of the Republic of Kazakhstan. For the calculation, information was used on the residence of the insured, the term, the nature of the policy (primary, repeated), the brand and year of manufacture of the car at the time of import into Kazakhstan.

Vehicles in transit or briefly entering the Republic of Kazakhstan for private purposes were excluded from the sample. At the same time, according to our assumptions, the initial entry of data about the car into the ESBD system coincides with the period of its actual importation.

Average prices are calculated on the basis of ads on the site www.kolesa.kz using the parsing method². Ads were grouped by make and age of cars, after which the arithmetic mean values of prices and their medians were calculated.

The volume of imports of passenger cars to the private sectors is included in goods, starting from the 1st quarter of 2015. This additional calculation is temporary due to the reduction in the volume of imports of cars according to the specified parameters. More detailed information on the methodology for assessing cars can be obtained in the working article «Evaluation of «gray» imports of cars in the balance of payments of Kazakhstan», posted on the NBRK website in the «Press Center and Research» section.

² collecting data from websites based on Python software algorithms

Appendix II.4

On transition to the new methodology of external sector statistics

Until 2013 the compilation of the external sector statistics of Kazakhstan was conducted in accordance with the International Monetary Fund (IMF), the Balance of Payments Manual, 1993, 5th edition (BPM5). Starting with the reports from the 1st quarter of 2013, the National Bank has made a transition to the new IMF methodology of the external sector statistics – the Balance of Payments Manual, 2009, 6th edition (BPM6) in order to comply with new international standards.

Conceptually, the BPM6 maintains continuity with the methodology of the previous edition (BPM5). Previous data on balance of payments statistics, based on the BPM5 recommendations, generally remain comparable with the aggregate data compiled according to the new methodology. Data conversion of the balance of payments, international investment position and external debt of Kazakhstan for the period 2005 to 2012 (incl.) has been implemented to achieve comparability of time series. The values of the balance of payments, international investment position and external debt accounts and their components for these periods changed since there was a rearrangement of individual items in the balance of payments.

The standard presentation of the balance of payments statistics, previously based on the use of credit (plus) and debit (negative) entries, has been modified for publication of data. The current account and capital account exclude the use of the "minus" sign while reflecting imports of goods and services as well as primary and secondary incomes payable. At the same time, the balance of relevant accounts (goods, services, primary income and secondary income) is defined as the difference between the credit and the debit.

In financial account, the terms "assets" and "liabilities" have been changed to "net acquisition of financial assets" and "net incurrence of liabilities". If there is an increase of assets or liabilities, it is shown with a "plus" sign; if there is a decrease in assets or liabilities, it's shown with a "minus" sign. The balancing item for the financial account is defined as the difference between assets and liabilities.

A brief summary of the changes in the BPM6 requirements compared with the BPM5 is given in the Appendix.

A detailed Methodology on international accounts (external sector statistics) developed on the basis of the BPM6 is available on the website of the National Bank of the Republic of Kazakhstan.

Because of the absence of direct investment data according to the directional principle (to Kazakhstan and abroad) in the standard presentation of the balance of payments and international investment position, additional analytical tables are provided:

- Direct investments on a directional basis: flows for the period – contains indicators of the net and gross inflows and outflows of the direct investments to and from Kazakhstan.
- Direct investments on a directional basis: position as of the end of the period.

Due to the changes in the presentation of the direct investments and the inclusion of transactions between fellow enterprises in its composition, the description of the indicators and the compilation methods for gross inflows and outflows of the direct investments have been clarified – direct investor's share capital buyback is excluded.

For the comparability of data, recalculation of time series on gross direct investment inflows to Kazakhstan from foreign direct investors and gross direct investment outflows from Kazakhstani direct investors abroad starting from the year 2005 has been completed.

Furthermore, the balance of payments and international investment position transactions and positions associated with foreign assets of the National Fund of the Republic of Kazakhstan have been moved to the “General government”.

For compliance with the requirements of the BPM6, the structure of standard presentation of external debt of the country has been slightly changed, particularly:

-) “Other sectors” does not include intercompany lending, which is currently presented as an independent component in the external debt composition. As in the balance of payments and international investment position, the intercompany lending includes liabilities to foreign fellow enterprises.
-) Beginning with the 1st quarter of 2013, “Other liabilities” include instruments such as “Insurance and pension programs, standardized guarantees”.
