

NATIONAL BANK OF KAZAKHSTAN

# Kazakhstan: Balance of Payments and External Debt

for 2015

May, 2016

This publication was prepared by the Balance of Payments and Currency Regulation Department. It reflects the latest developments in the external sector of the Republic of Kazakhstan and provides statistical reports on the balance of payments, international investment position and external debt of the country, as well as analytical commentaries to these reports. Statistical reports are supplemented by detailed analytical tables describing the methodology of external sector statistics and data sources for compilation. A separate statistical annex presents the structure of stocks and flows of international investment by type of investment. It is published on quarterly basis (in February, May, August and November) and available in three languages: Kazakh, Russian and English.

Adjustments to previously published historical data series are possible in case of the changes in accounting methodology of statistical data and (or) availability of additional information about foreign trade transactions. In accordance with the regulations, statistics of the external sector of the Republic of Kazakhstan is revised twice a year - during the compilation of reports on the balance of payments, international investment position and external debt for the half year and for the full year and covers the two years prior to the reporting. Updated data are published annually in May and November.

The main source for clarification of data is the emergence of additional information received at the time of compilation of the reports – the data obtained in the framework of registration and notification of foreign currency transactions, the identification of statistical discrepancies in reconciliation of data with others, except for statistical reporting on the balance of payments, data sources, as well as clarification of official trade statistics.

Due to rounding of data in separate cases in the tables provided in this publication, there may be minor differences in the last digit between totals and sum.

The date of compilation of statistical data for this publication is March 31, 2016. The date of the last update of data for the period 2013-2014 is March 31, 2016.

Additional information about the presentation of statistical data can be obtained from the Balance of Payments and Currency Regulation Department:

at the following address: 050040, Almaty, Koktem-3 micro district, 21

by phone: (727) 270-49-38 (balance of payment)

(727) 270-46-40 (international investment position and external debt)

by email: [zhumabekova@nationalbank.kz](mailto:zhumabekova@nationalbank.kz)

Statistical reports on the balance of payments, international investment position and gross external debt in standard and analytic representations, as well as a methodological commentary on the compilation of these reports are available on the website of the National Bank of Kazakhstan: <http://www.nationalbank.kz>. The specified statistical reports are published on the NBK's website on the 90th day after the end of the reporting period and are available in Kazakh, Russian and English languages.

## BALANCE OF PAYMENTS OF THE REPUBLIC OF KAZAKHSTAN for 2015

*The Balance of Payments summarizes economic transactions of an economy with the rest of the world (between residents and non-residents) for a specific period. The Balance of payments data represent economic category of flows that describe international economic relations with all types of real and financial resources in time series format. In the Balance of payments changes in values of financial assets and financial liabilities not allied with international operations, are not included.*

Dynamics of oil prices, transition to floating rate of national currency and government external borrowing and operation of National Fund of the Republic of

Kazakhstan (NFRK) were main factors influenced on balance of payments of Kazakhstan in 2015.

Table 1

### The main indicators of Kazakhstan's external sector

	2011	2012	2013	2014	2015
Current account (billion dollars)	10,2	1,1	1,2	6,4	-5,8
- in % of GDP	5,4	0,5	0,5	2,9	-3,1
Exports of goods and services (billion dollars for the period)	89,5	91,8	90,9	86,8	52,8
- in % of GDP	47,7	45,1	39,3	40,0	28,5
Import of goods and services (billion dollars for the period)	51,3	61,5	63,3	56,5	45,5
- in % of GDP	27,3	30,3	27,3	26,0	24,6
Foreign direct investment (net-inflow) (billion dollars for the period)	8,6	11,9	8,0	4,8	3,4
- in % of GDP	4,6	5,8	3,5	2,2	1,8
International reserves of the NBK (billion of dollars at the end of period)	29,3	28,3	24,7	29,2	27,9
- in months of imports of goods and services	6,9	5,5	4,7	6,2	7,4
National fund of RK (billion of dollars at the end of period)	43,7	57,9	70,8	73,2	63,4
Export of oil and natural gas (million of tones)	69,6	68,1	70,7	68,2	63,6
Price for Brent crude oil (USD / barrel, the average annual)	110,9	112,0	108,8	98,9	52,4
The exchange rate KZT / USD (average for the period)	146,6	149,1	152,2	179,5	222,5
Changes in the index of the real effective exchange rate (in % to December of the previous year)	3,5	0,1	-0,3	6,2	-29,9
Reference: GDP at current prices (billion dollars for the period)	187,8	203,3	231,5	217,3	185,0
- real growth (%)	7,5	5,0	6,0	4,3	1,2

Average monthly rate for Brent oil for 2014 amounted to 98.9 dollars<sup>1</sup> per barrel, decreased to 52.4 dollars per barrel in 2015. By the end of the year oil price declined below the mark of \$ 40 per barrel.

As a result of deep decline in oil rates current account of balance of payments in the reporting period<sup>2</sup> first for the last five years had a negative balance. With decreasing rates in real GDP growth ratio of current account deficit to GDP amounted to (-) 3.1% in the reporting period (Table 1).

Real appreciation of Tenge against the national currencies of major trade partners, especially the Russian ruble, was one of the factors of current account deficit growth. The result of sharp weakening of Russian ruble was loss of exchange rate competitiveness of Kazakhstani producers which taking into account the structure of bilateral trade relationship led to decreasing of Kazakhstan' export along with increasing of physical volume of russian goods.

Exchange rate' adjustment in August 2015 after transition to floating rate of Tenge within inflation targeting and in November 2015 after minimization of National Bank operations to maintain Tenge exchange rate

<sup>1</sup> Here and hereinafter - US dollars

<sup>2</sup> Here and hereinafter 2015 is considered as a reporting period, and 2014 - as a base period

facilitated to recovery of exchange rate competitiveness and let slow down the rate of net export decline (Figure 1).

On December 2015 exchange rate amounted to 327.8 tenge per dollar devaluated from the beginning of the year in nominal term by 80.2%. In real terms Tenge depreciation was less significant.

During the year dynamics of real effective exchange rate (REER) index was volatile. Thus, in the first half of the year under influence of Ruble depreciation and under pressure of relative depreciation of euro due to the program of Quantitative Easing by ECB, REER index showed real appreciation tenge against exchange rate' basket of major trade partners. In the second half of the year national currency' adjustment led to significant weakening of tenge in real terms.

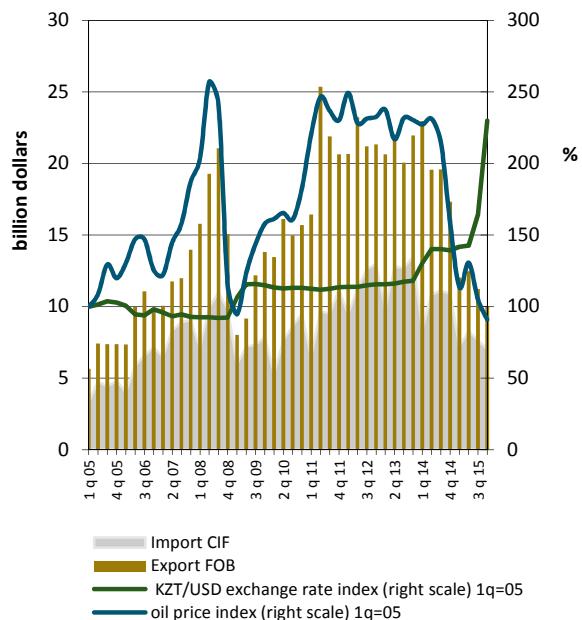

REER index calculated by the end of 2015 declined by 29.9% relative to December 2014 and amounted to 74.4 % to the base level of competitiveness of December 2013. At the same time RRER index against a basket of currencies of the CIS countries declined by 29.1% relative to December 2014, while in relation to the currencies of Other countries – by 30.1%.

In the reporting period tenge depreciated in real terms against the currencies of major trade partners: tenge to US dollar weakened by 36.5%, euro - 27.7%, yuan – 34.4 %, ruble - 29.3%. Market rate of tenge formed in November 2015 ensured recovery of real exchange rate parity ruble/tenge at the level of December 2013 (Figure 2).

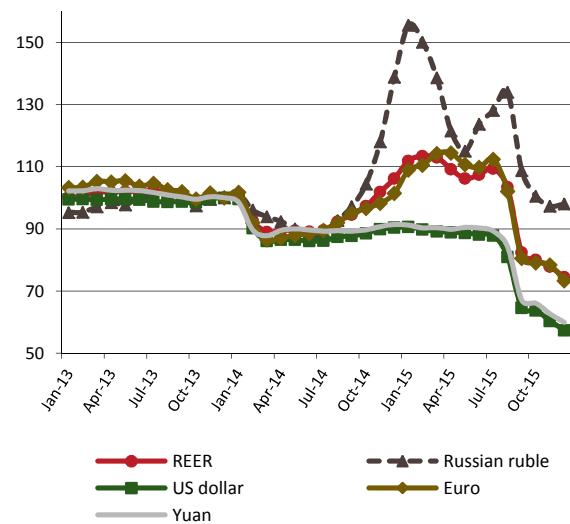

Current account deficit was financed by net capital inflow in financial account due to resources attracted from NFRK, foreign direct investment and government borrowings as well as reserve assets of National Bank.

However official reserves of the country including international reserves of National Bank and external assets of NFRK amounted to 91.3 billion dollars at the end of 2015 (49.3% to GDP), ensuring external stability of Kazakhstan in conditions of global economic crisis.

**Figure 1. Influence of main factors on external trade of the Republic of Kazakhstan**

**Figure 2. Real exchange rate to other major currencies (December 2013 = 100)**

## Current account

Based on results of 2015, the negative current account amounted to 5.8 billion dollars compared to 6.4 billion dollars surplus for 2014.

Residents' income and expenditures reduction registered in all main components of current account. In current revenue and payments structure the largest decline relative to the base period occurred from commodity export revenues and payments of investment income to non-residents (Table 2).

Table 2

## Structure of current revenues and current payments

million dollars

	2011	2012	2013	2014	2015
<b>Current revenues</b>	<b>94 509,5</b>	<b>96 477,3</b>	<b>96 264,4</b>	<b>91 460,4</b>	<b>56 482,3</b>
Export of goods	85 193,9	86 931,1	85 595,4	80 242,8	46 294,2
Export of services	4 337,7	4 828,2	5 298,3	6 594,4	6 480,4
Primary income receivable	2 232,0	2 089,6	2 320,4	2 033,1	1 987,1
Secondary income receivable	2 745,9	2 628,5	3 050,3	2 590,1	1 720,6
<b>Current payments</b>	<b>84 310,9</b>	<b>95 419,7</b>	<b>95 077,3</b>	<b>85 085,4</b>	<b>62 305,5</b>
Import of goods	40 349,8	48 785,8	50 803,2	43 548,2	33 645,3
Import of services	10 972,9	12 758,1	12 458,4	12 915,4	11 851,1
Primary income payable	29 977,1	30 206,6	27 468,1	24 701,0	13 502,3
Secondary income payable	3 011,1	3 669,1	4 347,6	3 920,9	3 306,8
<b>Current account</b>	<b>10 198,6</b>	<b>1 057,7</b>	<b>1 187,1</b>	<b>6 375,0</b>	<b>-5 823,2</b>

Rate of decline in commodity export outstripped the rate of decline in commodity import, as a result net commodity export in 2015 decreased almost three times (by 24 billion dollars) relative to 2014.

The openness of economy indicator, calculated as the ratio of trade turnover to GDP, declined in the analyzed period by 14.5% to 41% with decreasing share of exports in GDP by 11.8% and decreasing share of imports – by 2.7% (Table 3)

Table 3

## Openness of the economy

(in percentage to GDP)

	2011	2012	2013	2014	2015
<b>Export</b>	44,9	42,5	36,6	36,6	24,7
<b>Import</b>	19,6	22,8	21,1	19,0	16,3
<b>Trade turnover</b>	<b>64,5</b>	<b>65,3</b>	<b>57,7</b>	<b>55,6</b>	<b>41,0</b>

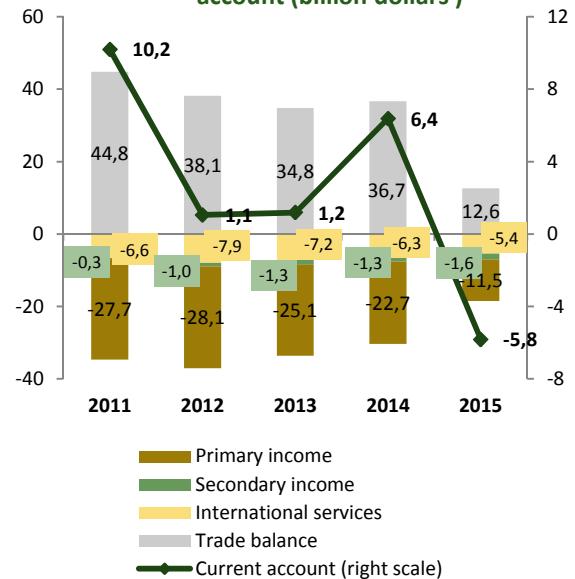

Significant reduction of foreign direct investors' income from investments to enterprises of raw material sector against unfavorable world prices of major Kazakhstan's exports conditioned twice reduction of negative balance of primary income (by 11.2 billion dollars) reducing the pressure on current account.

In other components of current account negative balance of international services decreased by 950 million dollars and balance of transfer transaction (secondary income) increased by 255 million dollars (Figure 3).

In 2015 main negative scenarios related to sharp decline in oil prices occurred, at the same time current account indicators

with the elimination of exchange rate imbalance adapted to new economic conditions. With easing of pressure on current account in 2016 it is expected current account deficit stabilization with further decreasing in following periods.

Figure 3. Main components of current account (billion dollars)

## External trade and trade balance

External trade turnover according to the balance of payments classification (including revisions of the official statistical data and adjustment from CIF import prices to FOB prices) for 2015 amounted to 79.9 billion dollars, decreasing by 43.9 billion dollars (35.4%) in comparison with the level of 2014. Exports of goods decreased by 42.3% to 46.3 billion dollars, imports decreased by 22.7% to 33.6 billion dollars.

Trade surplus amounted to 12.6 billion dollars against 36.7 billion dollars in 2014.

The total price index of Kazakhstan's exports relative to the base period decreased by 39%, while the index of import prices declined by 11%, as a result the average index of trade terms, which is calculated as the ratio of the change in contract export prices to the change in contract import prices, during the period was 31% below the base period (Table 4).

Table 4

**Changes in the price indices and trade terms**  
(in percentage as compared to the same period last year)

	Export prices	Import prices	Terms of trade
<b>2014</b>	<b>-4</b>	<b>-3</b>	<b>-1</b>
Q 1	-4	4	-8
Q 2	-5	5	-9
Q 3	4	-8	14
Q 4	-12	-14	2
<b>2015</b>	<b>-39</b>	<b>-11</b>	<b>-31</b>
Q 1	-34	-19	-19
Q 2	-41	-13	-32
Q 3	-39	-10	-32
Q 4	-42	0	-42

For 2015 **export of goods** registered in official statistics amounted to 45.7 billion dollars, which is 33.7 billion dollars less than that in 2014.

The decrease by 8.8% of the share of mineral products in total exports led to a decline in commodity export concentration ratio whose coefficient was 73.3% compared with 81% in 2014. Reduction of cost occurred in all main export items of Kazakhstan with the exception of group of

non-ferrous metals where the export growth by 126 million dollars recorded (Table 5).

Following the world prices the contract prices for crude oil decreased by 46.4% and amounted to 421.1 dollars per ton against 786.1 dollars in the base period. Quantity supplied of oil and gas condensate export decreased by almost 4.6 million tons and amounted to 63.6 million tons.

*Table 5*

*Table 6*

In group of nonferrous metals decrease of world prices for copper, aluminum, lead and zinc by 19,7%, 10,9%, 14,7% and 10,6% conditioned the reduction of export contract prices for mentioned goods by 18%, 4%, 11% and 4% respectively. With decline of world prices for gold and silver by 8,2% and 17,5% export prices for silver decreased by 15,9%, for gold – by 9,6%.

Price factor made primary contribution to the reduction of the export value. While the quantitative growth was recorded only for nonferrous metals due to growth in physical volume of copper by 36,9%, aluminum by 13,2% and silver by 23,8% (Table 6).

**Import of goods** registered in official statistics in the reporting year amounted to 30,2 billion dollars, which is 26,9% below the level of the previous year (Table 7). Commodity import concentration ratio at the end of 2015 amounted to 36,6% (35,5% in 2014).

Table 7  
**Commodity structure of import of the Republic of Kazakhstan**  
(according to official statistics)

Commodity group	2014	2015
<i>Value (million dollars)</i>		
All commodities	41 295,5	30 186,1
Consumer goods	12 341,4	8 248,8
Food products	4 007,1	3 132,1
Nonfood products	8 334,3	5 116,7
Intermediate consumption of manufactured goods	12 827,7	10 281,8
Investment goods	15 388,3	11 101,1
Other goods	738,1	554,4
<i>Ratio (%)</i>		
All commodities	100%	100%
Consumer goods	29,9%	27,3%
Food products	9,7%	10,4%
Nonfood products	20,2%	17,0%
Intermediate consumption of manufactured goods	31,1%	34,1%
Investment goods	37,3%	36,8%
Other goods	1,8%	1,8%

Decrease in the value was recorded in all major commodity groups of imports with the largest reduction in investment and

consumer goods. The decline in investment import by 4,2 billion dollars (27,9%) was mainly related to decrease of import goods such as phones (reduction by 32%), computers (by 50,4%), dump trucks (by 51,2%), bodies for motor vehicles (by 78,5%), bulldozers (by 57,5%), railway locomotive (93,5%) and carriages (by 71,5%).

Consumer import decreased by 4,1 billion dollars, including by 3,2 billion dollars due to reduction of import of nonfood products. In nonfood import structure most significantly reduced import of cars by 1,4 million dollars (63,2%) to 0,8 billion dollars. As a result priority in nonfood import took medical products, import of which amounted to 0,9 billion dollars (by 183 million dollars less than in 2014). The share of medical products in the group of non-food consumer goods increased by 18% (13,2% in the base period) with the share of cars 16,7% (27,9% in the base period).

Import of intermediate consumption of manufactured goods decreased by 2,5 billion dollars (by 19,8%), of which 2,6 billion dollars due to the reduction of petroleum products, oil and gas condensate (decrease by 175 million dollars) as well as tires, pneumatic tires, rods of iron, slabs of wood.

With the growth of the share of intermediate imports in total import of goods to 34,1% (by 3%), the share of investment and nonfood imports decreased to 36,8% and 17% respectively (by 0,5% and 3,2%).

The analysis of influence of price and volume factors on the cost of official imports shows that reduction in the cost of imports by 27% compared to the base period was due to the fall of average contract prices by 24% during the decrease in physical volumes by 4%.

Decline in the price component was registered in all groups of imports with the exception of other commodities. The largest decrease in volume was observed on nonfood and other imports. At the same time, a slight increase in imports in kind was observed only in intermediate goods (Table 8).

Table 8

**Influence of price and physical volume changes on the value of imports**  
*(2015 compared with 2014 according to official statistics)*

Commodity group	Import, million dollars		Change (increase (+), decrease (-))	Including as a result of changes in	
	2015	2014		price	volume
All commodities	30 186,1	41 295,5	-27%	-24%	-4%
Consumer goods	8 248,8	12 341,4	-33%	-27%	-9%
Food products	3 132,1	4 007,1	-22%	-17%	-6%
Nonfood products	5 116,7	8 334,3	-39%	-32%	-10%
Intermediate consumption of manufactured goods	10 281,8	12 827,7	-20%	-21%	1%
Investment goods	11 101,1	15 388,3	-28%	-25%	-4%
Other goods	554,4	738,1	-25%	3%	-27%

In the geographical structure of the **foreign trade turnover** registered by official statistics in 2015, the European countries dominate (45.1% of total trade turnover), including 34.9% - the countries of the European Monetary Union (EMU). After European region, the CIS countries follow – 26.9% and Asian countries – 24%. The share of the member states of the Eurasian Economic Union (EEU) in total turnover of the country amounted to 20.8%. In countries breakdown, the first place is occupied by the Russian Federation (19.2% of trade turnover), followed by China (13.9%), third and fourth places were taken by Italy (12.3%) and the Netherlands (7%). At the same time, Italy (17.8%) leads in the volume of exports, while Russia (33.9%) leads in the volume of imports.

The trade turnover with the **countries of EMU** in the reporting period amounted to 26.5 billion dollars decreasing by 42.9% relative to 2014, while exports decreased by 47.3% (mainly due to decreasing in contract prices), imports - by 16.4%. Exports of goods take about 80% of volume of trade with the Eurozone countries. Net exports of goods to EMU countries amounted to 15.4 billion dollars.

With a decrease in contract prices of exports with the countries of EMU on average by 45% and decrease of import prices by 32%, index of terms of trade with the euro area was by 11% lower than that in the base period (Table 9).

In 2015, exports of goods to EMU countries amounted to 20.9 billion dollars

(39.7 billion dollars in the base period); mineral products accounted for almost 92% of total exports. The commodity structure of imports from EMC, which in 2015 exceeded 5.5 billion dollars, sharp decrease by 2.6 times was recorded in import of transport vehicles relative to the base period. In other commodities of import nomenclature with EMU countries import value of machinery and equipment decreased by 4.0% and products of chemical industry declined by 18.3%.

According to official statistics, the trade turnover with the EEU member states for the reporting period decreased by 28.6% and amounted to 15.8 billion dollars, including 14.6 billion dollars - trade turnover with Russian Federation (RF).

In trade with **Russia**, unlike EMC countries, export prices fell less than the contract prices of import, as a result index of

terms of trade with Russia in the reporting period was higher by 6% compared with the base period (Table 10).

Q4	-49	-43	-10

Officially registered foreign trade turnover with **Russia** for the reporting year decreased by 27.8%, while imports amounted to 10.2 billion dollars (13.8 billion dollars in the base period) and exports - about 4.3 billion dollars (6.4 billion dollars). With a decrease in exports by 32% and imports by 25.9%, negative trade balance of goods with Russia decreased by 20.6%, amounting to almost 5.9 billion dollars.

Export of dominating in the structure of exports to Russia mineral products and base metals decreased by 21.3% and 47.1% relatively. The largest decline of import from Russia is recorded in group of nonfood consumer goods (by 32%), almost equally due to reduction of price and physical volumes. At the same time import of cars from Russia decreased almost twice to 0.6 billion dollars. Nevertheless, the share of import from Russian Federation in the total volume of imported cars by Kazakhstan increased to 70.7% against 49.8% in the base period. Import of food goods amounted to 1.2 billion dollars (1.5 billion dollars in the base period).

**Adjustments on coverage.** Turnover for trade transactions of individuals unreported in official statistics ("shuttle trade") for 2015 was estimated at 5.6 billion dollars. With the growth of exports by 18%

and increase of imports by 19.2%, turnover on unorganized trade in 2015 increased by 19% relative to the base period. The cost of exported goods estimated at the level of 0.8 billion dollars, and imported goods – 4.8 billion dollars. The negative balance of unreported trade transactions of individuals for the reporting year amounted to 4.0 billion dollars, an increase of 19.4% relative to the base period.

Based on the information of customs authorities on the import of cars by individuals for personal use with registration of Customs Payment Order (CPO), information on acquisition of spacecraft without importation on the territory of Kazakhstan and data of the partner countries on the supply of natural gas, adjustments to the value of official imports were made in the amount of 0.4 billion dollars.

Due to the reflection of goods that are not subject to recording in the official imports according to the methodological standards of international trade statistics, the downward adjustment to official imports was made in the amount of 42.4 million dollars.

According to the reported data of transport enterprises, the cost of purchasing fuel and food abroad (imports) totaled about 50 million dollars, similar cost of nonresidents' transportation companies in Kazakhstan (exports) amounted to 104 million dollars.

In accordance with BOP methodology, goods under processing without the change of ownership are not included in export/import of goods. According to statistical reports of enterprises on operations related to goods under processing, in the reporting period value of goods sent abroad amounted to 328 million dollars and goods received from abroad - 237 million dollars. These volumes excluded from official export and import of goods.

From the 3rd quarter of 2014, the statistical reports on the balance of payments record transactions of goods under merchanting. According to data reported by enterprises, goods were sold abroad in the amount of 36.4 million dollars, and goods

were acquired in the amount of 32.6 million dollars.

### Balance of international services

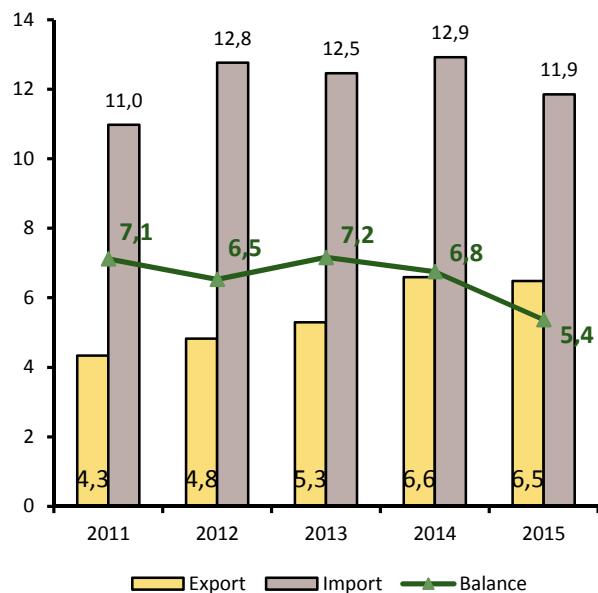

External trade turnover of services for 2015 amounted to 18.3 billion dollars which is 6.0% less than in 2014. With the decrease of exports of services by 1.7%, and imports of services - by 8.2%, deficit balance of international services for 2015 amounted to 5.4 billion dollars decreasing by 15.0% relative to 2014 (Figure 4).

In export structure of services transport services and travel traditionally prevails, while in import structure of services – other business services, travel, transport and construction services (Table 11).

Most part of **services export** income which takes about 6.5 billion dollars comes from transport services. Residents' income mainly formed due to income from freight services amounted to 3.6 billion dollars in the reporting period. Oil and gas pipeline transit through Kazakhstan' territory remained at the level of 2014, while income from real way transit of non-residents' freight decreased by 14.7%. External trade operations conditioned the reduction by 15.6% of automobile and air

transport services provided by non-residents for merchandise export and more significant decline by 26.0% of transport services by non-residents for merchandise import. As a result, the surplus balance of freight traffic grew to 1.7 billion dollars by 24.6% (Table 12).

**Figure 4. Dynamics of external trade in services (billion dollars)**

Sea transport	0,4	79,1	-78,7	0,2	58,9	-58,7

In "Travel" item increased both export and import of services. Resident's income from foreign citizens staying in Kazakhstan increased by 10.7%, while expenditures of domestic tourists to travel abroad grew by 4.0%, the negative balance decreased from 464.7 million dollars in 2014 to 384.3 million dollars in 2015.

**Imports of services** in the reporting year decreased to 11.9 billion dollars (12.9 billion dollars in 2014), primarily due to the reduction of transport and other business services (by 0.6 billion dollars for each item).

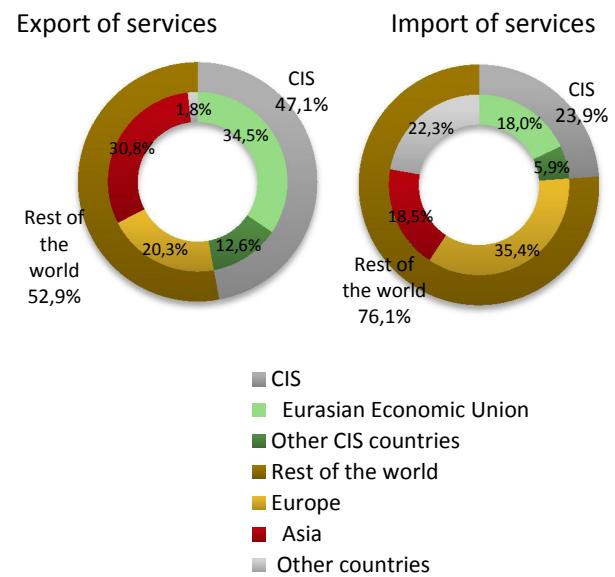

"Other business services" remain the most deficit item of services balance, which export amounted to 0.4 billion dollars and import – 5.2 billion dollars. In other business services structure there was spent 2.2 billion dollars (42.0%) for acquisition of architectural and engineering services and 1.6 billion of dollars for acquisition of business and management consultancy services

Large costs are still associated with import of construction services. In the reporting period the development of railway and highway construction, reconstruction of petroleum refineries, construction of facilities of the international exhibition "EXPO-2017" and the implementation of other infrastructure projects with the participation of non-residents amounted to 1.6 billion dollars.

In the geographical structure of Kazakhstan's international trade of services, the CIS countries accounted for 32.1% in foreign trade of services for the analyzed period, while the share of European and Asian countries equaled 30.0% and 22.8%, respectively (Figure 5).

The member states of the Eurasian Economic Union are main consumers of Kazakhstan's services, while European countries are main suppliers of acquired services. In distribution of services' exports and imports by country, the Russian Federation takes the first place – 30.4% of total exports and 15.2% of total imports.

Figure 5. Geographical structure of external trade of services of Kazakhstan in 2015

## Balance of primary income

In 2015 the negative balance of primary income formed in the amount of 11.5 billion dollars (22.7 billion dollars in 2014). At the same time, income receivable from nonresidents for providing labor and capital services decreased by 2.3% to 2 billion dollars, and income payable to nonresidents decreased by 45.3% to 13.5 billion dollars.

**Compensation of employees.**

Negative imbalance of compensation of employees in the reporting period amounted to 1.7 billion dollars, decreasing by 6.6% relative to 2014. Compensation of employees working abroad and citizens of Kazakhstan employed in foreign embassies and representative offices of international organizations in the country is estimated at 3.9 million dollars. The income of foreign citizens working in Kazakhstan decreased by 6.6%, while the compensation of nonresidents hired by Kazakhstan's enterprises decreased by 3.5% and amounted to 732.8 million dollars. The salary estimate of informally employed labor immigrants from the CIS countries was 937.7 million dollars.

The deficit of the **balance of investment income** totaled 10.0 billion dollars (Table 13) decreasing by 52.5% relative to 2014 (21.0 billion dollars in the base period).

Income received from foreign investment into Kazakhstani economy was due to investing assets of General government sector (foreign assets of NFNБ) and Central bank (international reserves and other foreign currency assets of National

Bank). For 2015 income from foreign assets of Government of Kazakhstan and National Bank amounted to 1.0 billion dollars decreasing by 12.5% relative to 2014. Including payments of foreign debt servicing net investment income of *General government sector* and *Central Bank* decreased by 28% relative to 2014 (Table 14).

On transaction of *banking sector* income receivable decreased by 6.9% (to 0.29 billion dollars) relative to 2014, while income payable – by 17.7% (to 0.8 billion dollars). Payments of interest by banks (with the exception of income from equity) decreased by 17.4% to 497 million dollars, where 337 million dollars accrued on debt securities issued by Kazakhstan's banks, and 128 million dollars were spent on servicing of loans.

On transactions of *other sectors* negative imbalance amounted to 10.3 billion dollars, decreasing by 52.2% relative to 2014. The net income of nonresident creditors who are not in direct investment relationship decreased by 8.4% to 2 billion dollars, and net income of nonresidents on transactions of direct investment decreased by 57.2% to 8.2 billion dollars.

## Secondary income

The deficit in the secondary income in the reporting period totaled 1.6 billion dollars; its growth compared to the base period by 19.2% was mainly due to reduction of transfer transaction receivable by 33.6% with decreasing of transfer transaction payable by 15.7% (Figure 6).

Despite of reduction of negative balance of personal transfers (remittances of individuals to/from Kazakhstan) by 16.9% amounted to 1.3 billion dollars in 2015; secondary income deficit growth was mainly related to reduction of transfer transaction of general government sector by 36.4%.

Remittances of individuals sent abroad amounted in the reporting period 1.5 billion dollars decreased by 294 million dollars mainly due to reduction of transfers to China and Turkey - by 101 million dollars and 95 million dollars respectively. While transfers to Russia increased insignificantly (by 3.9%), reached the amount of 649 million dollars. Personal transfers from abroad received in the amount of 190.6 million dollars (224.7 million dollars in the base period).

In transfer transactions of the general government taxes receivable from non-residents from income received in

Kazakhstan decreased by 26.9% (by 234 million dollars). Due to merchandise import decline in EEU countries there was a significant decline in the amount of import duty received to republican budget (by 46.2%) and transferred to EEU member countries (by 44.7%). Oil supply to Russia as a compensation of uncollected income of Russian budget through customs-free supply of oil products to Kazakhstan, started in the fourth quarter of 2014, amounted to of 595 million dollars. As a result positive balance of General government sector in the amount of 525.5 million dollars in the base period changed to negative in the amount of 20 million dollars in the reporting period.

**Financial account**

During 2015 the negative balance of the financial account (excluding transactions with reserve assets of the National Bank) amounted to 10.6 billion dollars (6.8 billion dollars in the base period). Due to reduction of external assets and growth of external liabilities on financial transactions there was net capital inflow or "net borrowing from the rest of the world".

In the reporting period, net capital inflow into the country ensured mainly by transactions of *General Government sector* and Kazakhstani banks transactions related to the sale of securities issued by nonresidents, and the reduction of their assets in foreign accounts (Table 15).

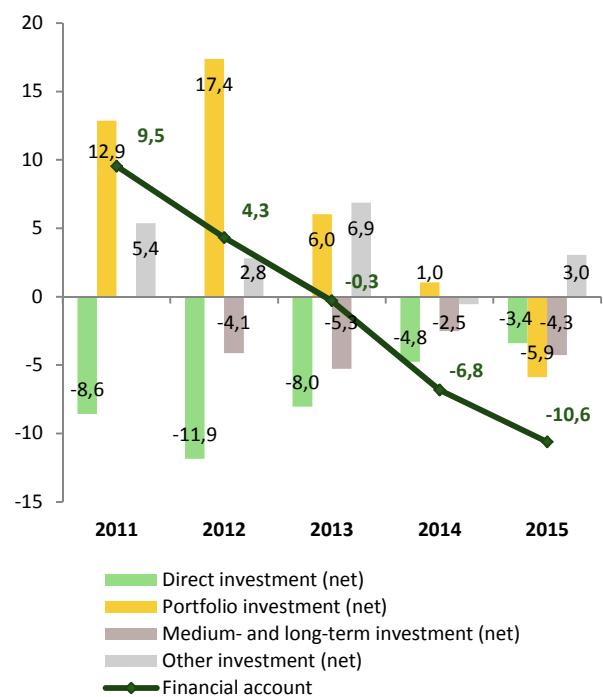

*In the structure of the financial account, the net capital inflow was registered on direct, portfolio and other medium- and long-term investments and net outflow on other investments (Figure 7).*

**Direct investment**

On *foreign direct investment* (FDI), net growth of liabilities to nonresidents exceeded net growth of foreign assets by 3.4 billion dollars, while negative imbalance was due to the results of the 1st quarter and 2nd half-year of 2015: at the same time, in the 2nd

quarter of 2015, growth of assets exceeded that of liabilities (positive balance) by 0.2 billion dollars.

Figure 7. Structure of financial account (billion dollars)

For comparison in 2014, net growth of liabilities to nonresidents exceeded net growth of foreign assets (negative balance) by 4.8 billion dollars.

**Net growth of financial assets on direct investment** in the reporting period increased by 38.1% and amounted to 3.2

billion dollars (2.3 billion dollars in the base period). The increase of financial assets on direct investment due to increase in intercompany lending of nonresidents and investments into capital of foreign subsidiaries by Kazakhstani enterprises.

**Net incurrence of liabilities on FDI** in the reporting period amounted 6.6 billion dollars (7.1 billion dollars in the base period) mainly due to increase in intercompany lending of Kazakhstan's residents to their foreign affiliated companies as well as increase of Kazakhstani enterprises capital by foreign parent companies.

### Gross inflow of FDI to Kazakhstan<sup>3</sup>

amounted to 14.8 billion dollars (23.7 billion dollars in the base period). Inflow of FDI to mining of crude oil and natural gas reduced by 62.0% and amounted to 2.8 billion dollars, to activities of geological exploration and research – by 5.1% to 5.4 billion dollars, to activities of manufacture of basic metals and fabricated metal products except machinery and equipment by 40.6% to 1.8 billion dollars, to wholesale and retail trade, repair of motor transport – by 46.7% to 1.5 billion dollars. Inflow in the financial sector almost unchanged in comparison with the base period and amounted to 0.5 billion dollars.

In the structure of gross inflow of foreign direct investment by country, the first place is by the Netherlands (38.8% from gross inflow of FDI), then followed by the USA (18.8%), Switzerland (12.7%), France (6.5%), Belgium ( 4.7%), the Russian Federation (3.8%), China (3.0%), South Korea (2.7%), the United Kingdom and Japan (2.6%), Germany (2.2%).

### Portfolio investment and financial derivative instruments

The balance on portfolio investment formed with the negative balance of 5.9 billion dollars (positive balance of 1.0 billion dollars in the base period) due to higher rate of assets' reduction in portfolio investment in comparison with a reduction of liabilities on

<sup>3</sup> It includes admission to the share capital of the Kazakhstani subsidiaries, reinvested earnings and debt financing raised from foreign parent companies without repayment.

them. Meanwhile, in the 4th quarter of 2015 balance for the portfolio investment was positive and amounted to 1.4 billion dollars.

Decrease of net acquisition of **financial assets on portfolio investment** by 9.5 billion dollars was due to a reduction of foreign assets of the National Fund of the Republic of Kazakhstan by 8.4 billion dollars and 0.8 billion dollars by Kazakhstani banks (Table 16).

Reduction of net incurrence of **liabilities on portfolio investment** in the reporting period by 3.6 billion dollars (increase by 5.4 billion dollars in the base period) owing to transactions of nonbanking sector to repayment (mainly in the 1st half and the 4th quarter of 2015) of debt

securities which were issued earlier in foreign markets for a total amount of 5.2 billion dollars (main volume of transactions accounted for the national companies). At the same time, decrease of liabilities was partly compensated by the issue of Eurobond's by the Ministry of Finance of the Republic of Kazakhstan in the amount 4.0 billion dollars in the 3rd quarter 2015.

Negative balance on transactions with derivative financial instruments amounted to 115.4 billion dollars (37.1 billion dollars in the base period). In the reporting period transactions with derivate instruments were mainly conducted by Kazakhstani banks as well as with foreign assets of the National Fund of the Republic of Kazakhstan.

millions dollars

## Other investment

On transactions recorded under *Other investment* in the reporting period there are a negative balance of 1.2 billion dollars (3.1 billion dollars in the base period) due to reducing residents' assets (by 1.2 billion dollars).

On **medium and long-term investments**, increase of liabilities by 1.8 billion dollars (Table 17) was registered due to growth of liabilities on loans of nonbanking sector enterprises (1.7 billion dollars) and general government (mainly by attracting the loan of 1 billion dollars from the Asian Development Bank in the 4th quarter 2015).

On **short-term investment** liabilities decreased by 1.8 billion dollars due to the decrease of accounts payable of nonbanking

organizations, liabilities of banks and non-banking sector companies to nonresidents on short-term loans as well as a decrease of funds in nonresident's accounts in Kazakhstani banks. **Financial assets** under *Other investment* in the reporting period decreased by 1.2 billion dollars due to reduction of banks' assets in foreign accounts and repayment of long-term loans from the Kazakhstani nonbanking organizations by nonresidents (mainly on transactions of the 1st quarter 2015).

The National Bank of Kazakhstan's assessment of non-classified in BOP transactions by individuals with foreign currency (reflected in *Other debt claims of Other sectors*) partially compensated for the decrease of assets in *Other investment* (Table 18).

**Net inflows/outflows of capital by the private sector** include all the transactions of the private sector recorded in the financial account of the balance of payments, as well as errors and omissions. As a result the first time in 2015 there was a net outflow of capital by the private sector (Figure 8).

In the reporting period the net outflow of capital from the private sector transactions in a sum of 7.1 billion dollars (net inflow of 15 million dollars in the base period) mainly due to a significant reduction in growth of external liabilities of nonbanking sector. In 2014 liabilities of other sectors

increased by 14.4 billion dollars and their growth was only 0.6 billion dollars in 2015.

### Reserve assets

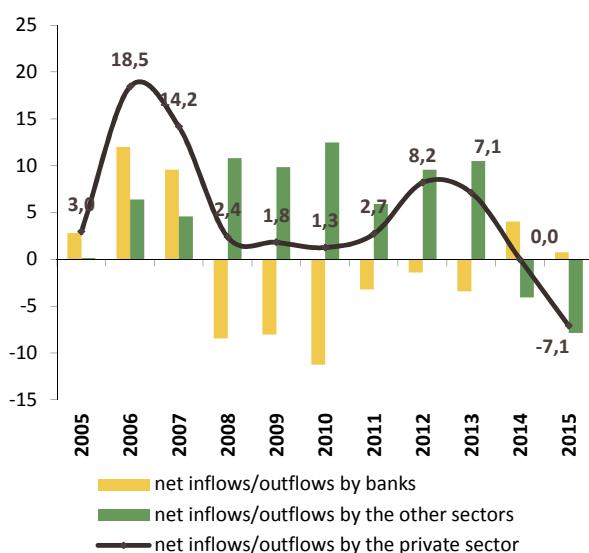

As a result of 2015 international reserves of the National Bank decreased by 0.8 billion dollars. As a result of transactions in domestic currency market in the 2nd and 3rd quarter during year there was a reduction of reserve assets (by 0.6 billion dollars and 0.7 billion dollars respectively), while in the 1st and 4th quarters reserve assets increased by 0.5 billion dollars and 0.1 billion dollars.

Besides transactions of National Bank, the change in the level of reserve assets is affected by changes in exchange rate and cost, which not reflected in balance of payment.

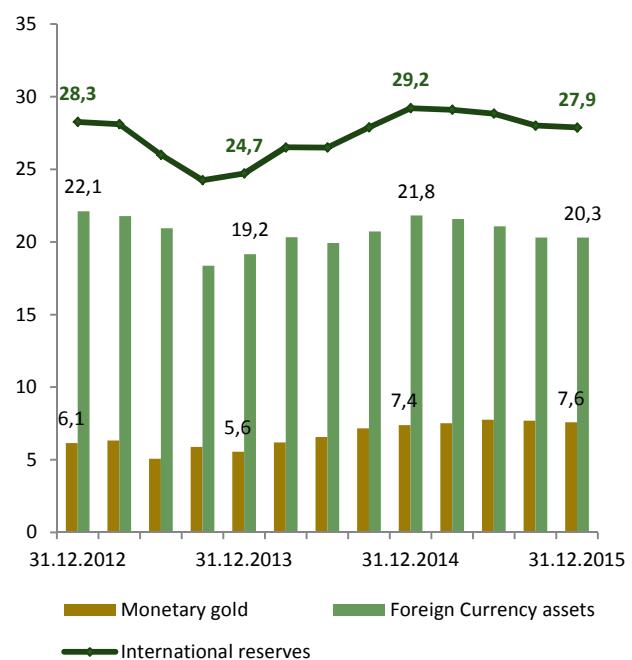

As of December 31, 2015, the share of monetary gold in total volume of international reserves amounted to 27.2% or 7.6 billion dollars (on December 31, 2014 – 25.3% or 7.4 billion dollars), currency assets – 72.8% or 20.3 billion dollars (on December 31, 2014 – 74.7% or 21.8 billion dollars) (Figure 9).

As of December 31, 2015, the international reserves (excluding assets of the National Fund of Kazakhstan) are estimated at 27.9 billion USD, which covers 7.4 months of import of goods and services of Republic of Kazakhstan.

<sup>1</sup>Coefficient of commodity concentration is calculated as the square root of the sum of squares of the ratios of export /import of certain product groups to their aggregate volume  
Increase of coefficient means the growth of share of certain group of goods in total.

**Analysis of price and quantity of supplies for export of certain goods**

Name of commodity group	January - December 2015	January - December 2015	January - December 2014	Price	Quantity	Value			
	Value (in million of US dollars)

## Note

<sup>1</sup> Increase in the index means appreciation of the national currency, decrease - depreciation

<sup>2</sup> All historical estimates have been updated and refined

<sup>3</sup> Percentage change compared with the same period of the previous year

Real effective exchange rate index (REER) excluding oil trade<sup>1</sup>from January 2015 - group of 37 countries<sup>2</sup>

(chain index method was used for transition periods)

**INTERNATIONAL INVESTMENT POSITION  
OF THE REPUBLIC OF KAZAKHSTAN  
as of December 31<sup>st</sup>, 2015**

*International Investment Position (IIP) presents the difference between accumulated stocks of country's external financial assets and liabilities. It reflects changes that happened during the period, such as: operational changes attributable to external transactions (that fully correspond to the financial account of the Balance of Payments); valuation changes – caused by exchange rate and price fluctuations of*

*financial instruments; other changes – as a result of revision of transactions' classification, write-offs of bad debts, different coverage of respondents, etc.*

*Appendix II provides data on direct investment compiled according to the directional principle in accordance with BPM6 and the 4th Edition of «Benchmark Definition of Foreign Direct Investment».*

**FDI data update in IIP statistical report**

Beginning from the 3<sup>rd</sup> quarter of 2014, new edition of Report on financial claims to nonresidents and liabilities to them was introduced. One group of respondents of this report includes enterprises with foreign direct investments. Valuation method of Own funds at book value (i.e. Net asset value method) was accepted as one of the available methods to evaluate market value of equity of foreign direct investors in Kazakhstan's enterprises except for joint-stock companies (JSC) with quoted shares. Most of these enterprises do not measure their assets according to market value. On the other hand, book value of their liabilities (denominated in foreign currency) has significantly increased due to tenge devaluation. As a result, book value of a portion of Kazakhstan's enterprises with foreign direct investment reflected in IIP according to the share of direct investor resulted in a negative number.

In addition, according to the Balance of payments and international investment position manual, 6<sup>th</sup> edition, 2009 (BOP6) value of equity of foreign direct investor in investment enterprise reflects residual value that investor will get in case of liquidation of investment enterprise and could be a negative number in the beginning or in the end of the activity of investment enterprise (in case of a bankruptcy) or during a short period of time (due to a frequent assets turnover).

Due to aforementioned reasons, after consultations with experts of International Monetary Fund, beginning from the 3<sup>rd</sup> quarter of 2014, National Bank has made changes to market value of equity of foreign direct investors in IIP by reevaluation of value of particular Kazakhstan's enterprises with negative capital.

Therefore, in IIP statistical report FDI data is updated beginning from the 3<sup>rd</sup> quarter of 2014.

As of end of 2015, the country's external assets amounted to 156.7 billion US dollars (further – billion USD), decreasing during the year by 20.8 billion USD, while decrease in the 4<sup>th</sup> quarter equaled to 9.0 billion USD. Country's external liabilities also decreased during the year by 19.5 billion USD, including a decrease by 6.8 billion USD during the 4<sup>th</sup> quarter and as of end of 2015 amounted to 198.5 billion USD. (Appendix 1).

Net IIP that is equal to accumulated stocks of external assets less accumulated stocks of external liabilities as of end of 2015 amounted to (-) 41.8 billion USD (Figure 1).

Net IIP shows a difference between what a country owns and what it owes to others. Therefore, an increase of a negative difference between external assets and external liabilities, i.e. IIP decrease, is considered as IIP deterioration.

Overall, during 2015 IIP decreased by 1.3 billion USD; in the third quarter there was an improvement in IIP by 6.9 billion USD, but in the fourth quarter there was a decrease by 2.1 billion USD. IIP decreased by 11.4 billion USD due to operations with financial instruments and increased by 10.1 billion USD due to non-operational changes. Considering

a decrease of external liabilities during 2015, IIP decline happened due to a decrease of external assets.

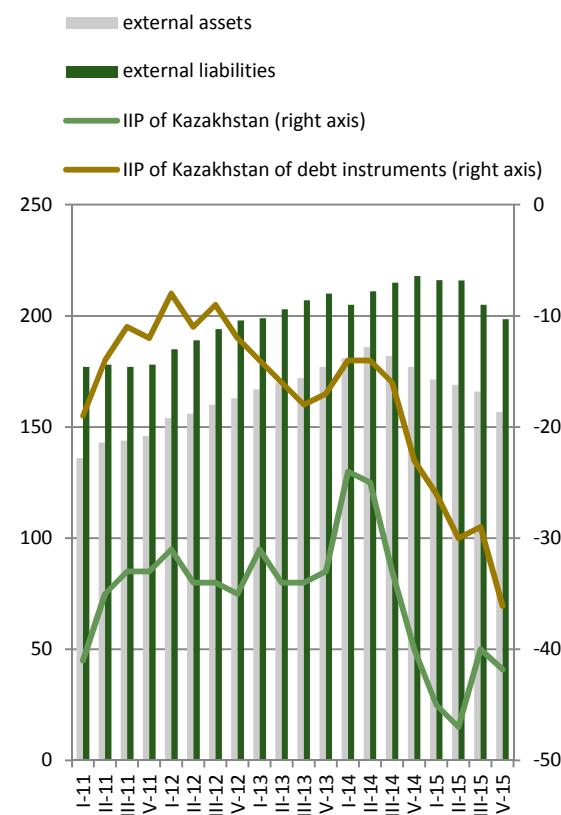

A considerable decrease of liabilities' value was caused by a negative reevaluation because of a decrease of equity value of Kazakhstan's enterprises in dollar equivalent due to transition to a free-floating exchange rate of tenge in the 3<sup>rd</sup> quarter of 2015 and decrease of value of Kazakhstan's debt securities that belong to non-residents. Negative valuation changes of external assets are caused by a decrease of value of securities in the portfolio of National Fund of Kazakhstan (further – NFK) and exchange rate changes. Overall, exchange rate, price fluctuations, and other changes resulted in a decrease of country's external assets and liabilities (Table 1).

Kazakhstan's net external debt, which represents IIP of debt instruments with the opposite sign, amounted to 36.1 billion USD. Therefore, during 2015 net external debt increased by 13.6 billion USD, including an increase during the 4<sup>th</sup> quarter by 6.9 billion USD.

**As of end of 2015, in the breakdown of IIP by Kazakhstan's economic sectors**  
Central bank (the National Bank of Kazakhstan, further - NBK) and General

government are characterized as "net lenders"; in other words, external assets of these sectors exceed external liabilities, including debt instruments (Appendix2).

IIP, as of 31/12/15		156,7	198,5	-41,8	-36,1	36,1

<sup>1</sup> Due to a lack of information about stocks of external assets of individuals (that are included in Other sectors), flows of such categories of financial instruments, as 'direct investment' (in relation to real estate abroad), 'currency and deposits' (stocks on accounts in foreign banks) and 'other assets' (foreign currency on hands) represented in financial account of balance of payment are written off as other changes.

<sup>2</sup> Debt instruments include currency and deposits, unallocated gold accounts, debt securities, loans, insurance, pension, and standardized guarantee schemes, trade credits and advances, special drawing rights, other accounts receivable and accounts payable.

<sup>3</sup> More details on external debt can be found in an analytical report "External Debt of Kazakhstan."

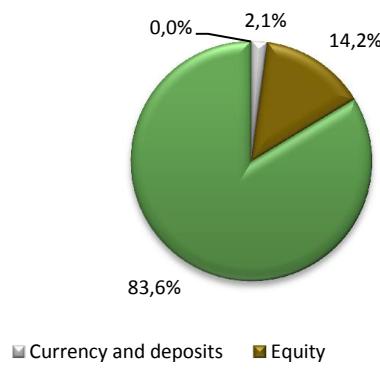

The NFK accounts for a significant share of external assets of General government, which as of December 31<sup>st</sup>, 2015, amounted to 63.4 billion USD or 40% of the country's external assets. Reserve assets account for a major part of external assets of the central bank (NBK) and as of end of the year has equaled to 27.9 billion USD or 18% of the country's external assets. Composition of NFK and reserve assets of the National Bank of Kazakhstan<sup>4</sup> is presented in Figure 2.

Overall, during 2015 NFK assets decreased by 9.8 billion USD, including a decrease during the 4<sup>th</sup> quarter by 4.1 billion USD due to a decrease of debt securities in the fund's composition. During 2015, reserve assets of the NBK decreased by 1.3 billion USD, including a decrease during the 4<sup>th</sup> quarter by 137.2 million USD.

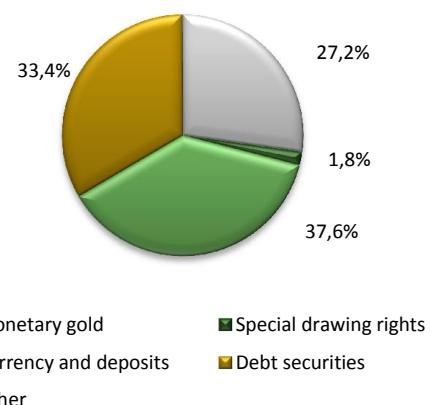

Other sectors<sup>5</sup> and Banks (Deposit-taking corporations, except the central bank) remain to be "net borrowers". There is an improvement of investment position of these sectors due to a significant decrease of external liabilities of Banks and Other sectors. So as of December 31<sup>st</sup>, 2015 external liabilities exceeded external assets of Other sectors by 119.6 billion USD and of Banks sector (Deposit-taking corporations, except the central bank) – by 4.2 billion USD (Figure 3).

**Figure 2. NFK assets and NBK reserve assets by financial instruments, as of 31/12/2015**

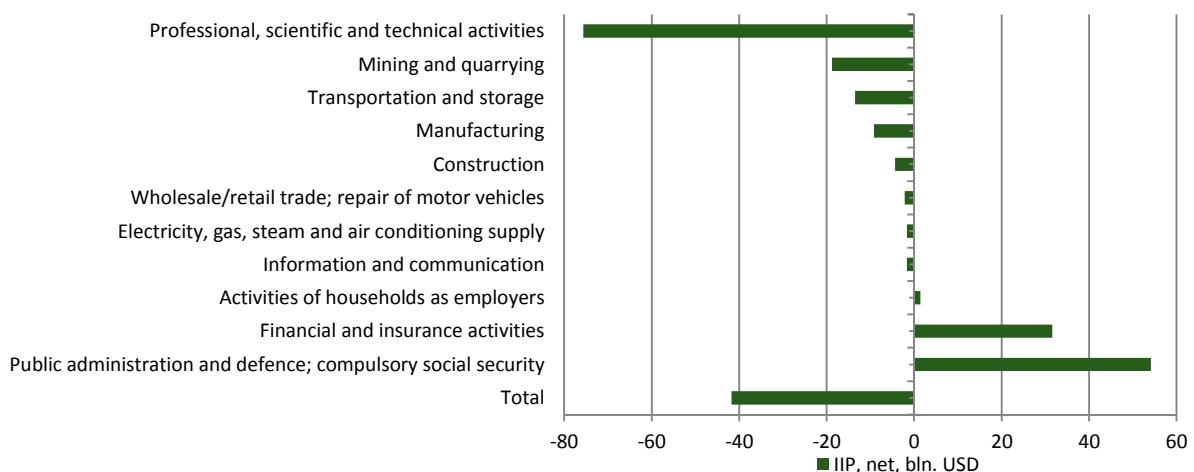

**a. Composition of external assets of NFK**

**b. Composition of reserve assets of NBK**

**Figure 3. IIP of Kazakhstan by by residents' types of economic activities, as of 31/12/2015**

<sup>4</sup> Composition of foreign assets of NFK and reserve assets of the National Bank of Kazakhstan in statistics of the IIP can be slightly different from the composition in other sources due to the specificity of accounting of financial derivatives in the composition of those assets according to BPM6.

<sup>5</sup> In the composition of the IIP, Other sectors also include assets/liabilities, bound by direct investment relationship, while in the statistics of external debt, liabilities of direct investment (i.e. intercompany lending) are in a separate category.

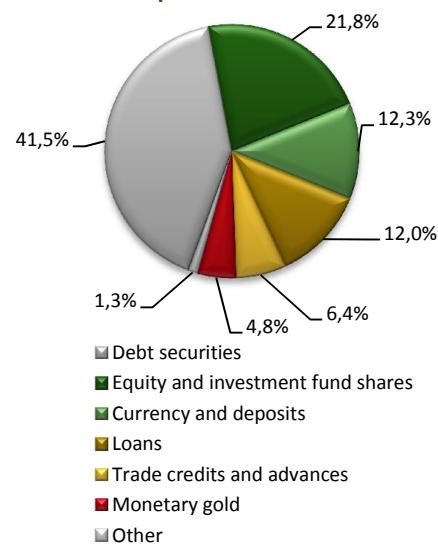

During 2015, net external debt of Other sectors decreased by 10.4 billion USD, including a decrease during the 4<sup>th</sup> quarter by 270.6 million USD, and as of end of December net external debt of Other sectors amounted to 99.1 billion USD. **IIP breakdown by types of financial instruments** remains to be the same during 2015. It is presented in Figure 4. As before, a major share of external assets consists of nonresidents' debt securities; mainly, in NFK portfolio and in NBK reserve assets. Loans and debt securities in nonresidents' portfolio represent a major part of external liabilities.

**IIP by partner economy** can help to identify overreliance of Kazakhstan's economy on another economy, and, hence, to identify potential vulnerability and contagion effect (Figure 5).

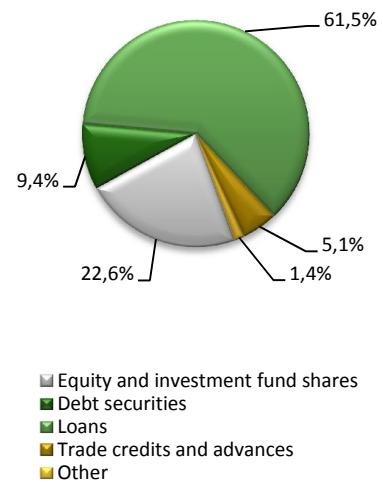

In IIP by partner economy, as of reporting date Kazakhstan has a positive investment position (excess of assets over liabilities) in a relation to such countries as USA, Germany, Seychelles, and other countries. On the other hand, it has a negative investment position (excess of liabilities over assets) in relation to Netherlands, China, United Kingdom, and France (Appendix5). Netherlands and United Kingdom are financial centers through which capital is transited from other countries to Kazakhstan.

**Figure 4. IIP by types of financial instruments, as of 31/12/2015**

b. Composition of external liabilities

**Figure 5. IIP of Kazakhstan by countries, as of 31/12/2015**

### Investment position of Banks sector

During 2015, the investment position of Banks (deposit-taking corporations, except the central bank) has deteriorated. Beginning from the 2<sup>nd</sup> quarter of 2015, Banks sector is characterized as "net borrower" (Figure 6).

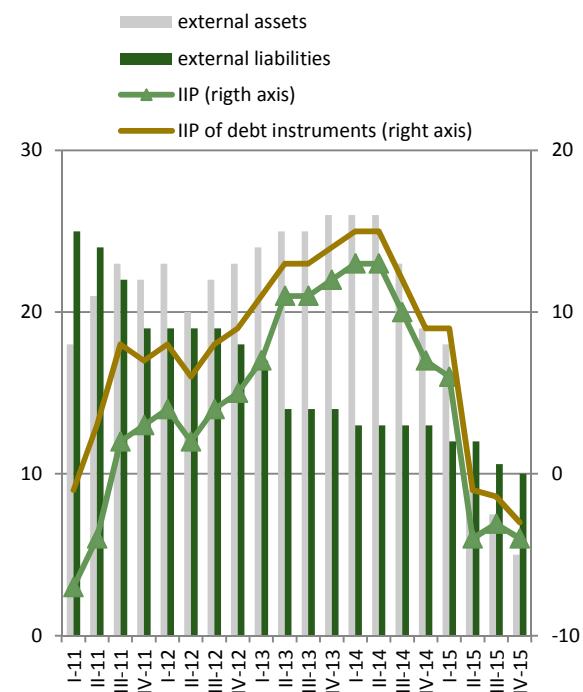

As of December 31<sup>st</sup>, 2015 the investment position of Banks (deposit-taking corporations, except the central bank) amounted to (-) 4.2 billion USD, including net external debt of 2.8 billion USD. Therefore, external liabilities in the form of debt instruments exceed external debt assets by 2.8 billion USD. During 2015, net external debt increased by 11.6 billion USD, including increase during the 4<sup>th</sup> quarter by 1.4 billion USD. IIP of Banks sector by types of financial instruments is presented in Figure 7.

As of end of 2015, external assets of Banks sector amounted to 5.5 billion USD (or 4% of external assets of Kazakhstan), decreasing during the year by 13.9 billion USD (mainly due to an exit of JSC "BTA Bank" from Banks sector), including decrease by 2.0 billion USD in the 4<sup>th</sup> quarter (mainly due to a decrease of foreign currency in Banks, money of Banks on accounts abroad). Loans amounted to 30% of Banks external assets or 1.6 billion USD.

As of December 31<sup>st</sup>, 2015 expired debt to Banks (deposit-taking corporations, except the central bank) as a part of loans of nonresidents equaled to 134.8 million USD (a predominant part of expired debt is taken up by residents from the Russian Federation) (Figure 8, Appendix 3).

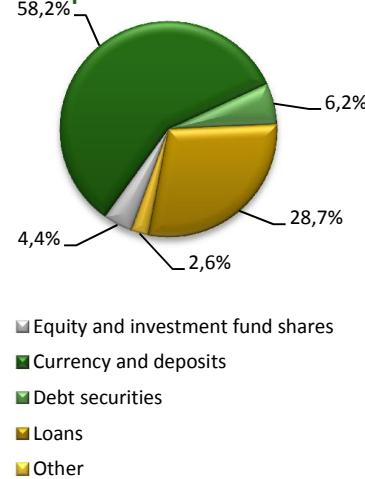

During 2015, volume of foreign currency held by Banks (Deposit-taking corporations, except Central bank) decreased by 381.8 million USD, including decrease by 271.9 million USD during the 4<sup>th</sup> quarter. And as of end of December 2015, foreign currency held by Banks amounted to 894.7 million USD (or 16% of Banks' external assets).

**Figure 6. IIP of Banks sector, as of the end of the period (billion USD)**

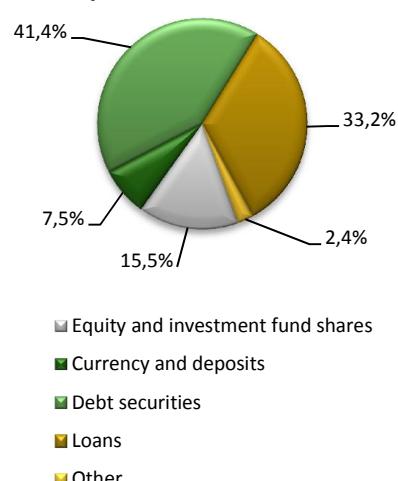

**Figure 7. IIP of Banks sector by types of financial instruments, as of 31/12/2015**

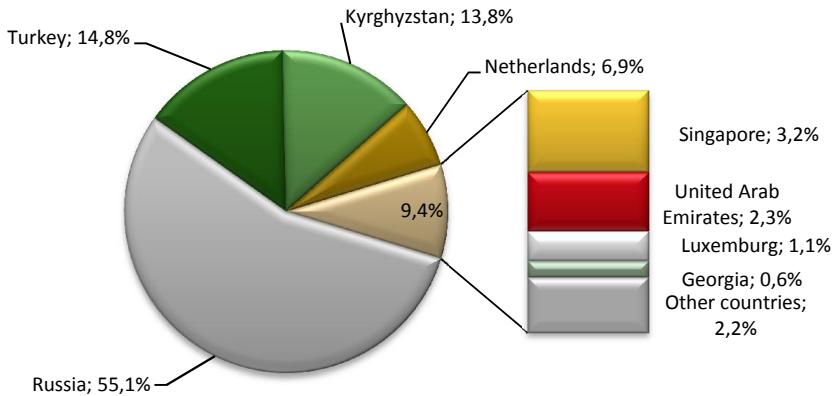

#### a. Composition of external assets

#### b. Composition of external liabilities

**Figure 8. Loan debts of non-residents to Banks, as of 31/12/2015**

As of end of 2015, external liabilities of Banks amounted to 9.7 billion USD (or 5% of Kazakhstan's external liabilities), decreasing during the year by 3.1 billion USD, including decrease by 0.9 billion USD during the 4<sup>th</sup> quarter. The largest share of external liabilities (41%) is occupied by debt securities of Banks (mainly – Eurobonds), held by non-residents.

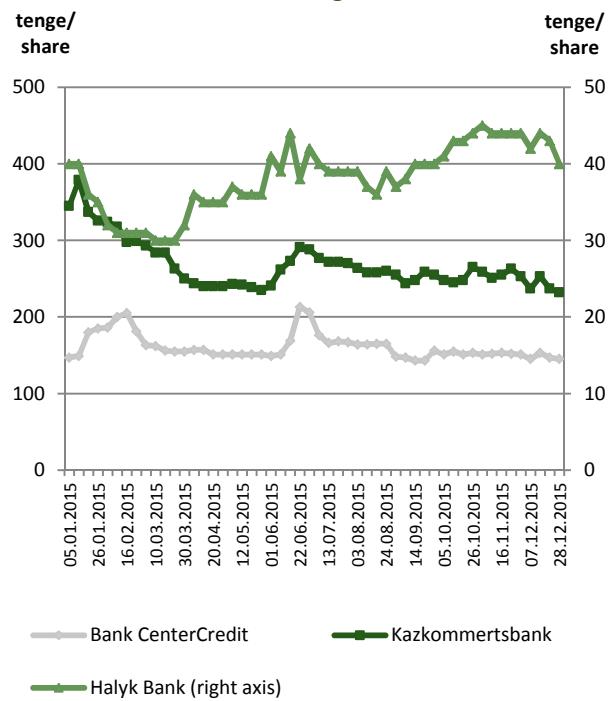

Decrease of Banks' external liabilities (excluding external debt decrease) during 2015 is caused by an exit of nonresidents from shareholders of JSC "BankPositiv Kazakhstan" and price fluctuations of Banks' shares (Figure 9). As of end of 2015, total equity of nonresidents in the capital of Banks taking in consideration secondary market is estimated to equal to 1.5 billion USD, decreasing during the year by 1.0 billion USD.

#### Investment position of Other sectors

In the period from the 2<sup>nd</sup> quarter to the 4<sup>th</sup> quarter of 2015, the investment position of Other sectors has been improving (Figure 10).

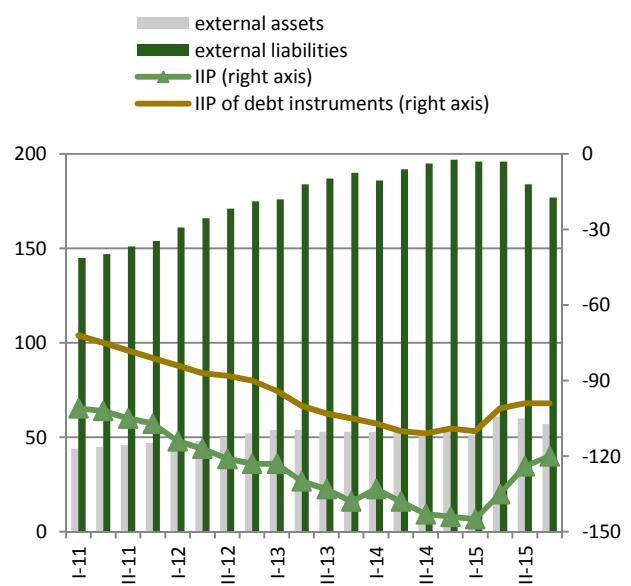

As of December 31<sup>st</sup>, 2015 investment position of Other sectors amounted to (-) 119.6 billion USD, increasing during the year by 24.2 billion USD, including increase by 4.3 billion USD in the 4<sup>th</sup> quarter.

**Figure 9. Market value of Banks' common shares during\* 2015**

\* Source: KASE website

**Figure 10. IIP of Other sectors, as of the end of the period (billion USD)**

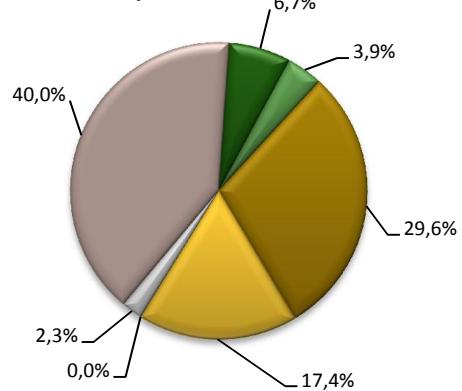

External assets of Other sectors increased during the year by 3.9 billion USD, but during the 4<sup>th</sup> quarter decreased by 2.7 billion USD mainly due to a decrease of debt instruments: loans from affiliated non-residents and trade credits and advances and debt securities of nonresidents. It is important to note financing of nonresidents by funds attracted from other nonresidents that does not affect net investment position, but increases external debt. As of end of 2015, external assets of Other sectors amounted to 57.0 billion USD (36% of country's external assets). Predominant part of external assets is taken up by equity and investment fund shares (Figure 11).

External liabilities of Other sectors decreased during the year by 20.3 billion USD, including decrease by 7.0 billion USD during the 4<sup>th</sup> quarter due to valuation changes of equity of Kazakhstan's enterprises. As before, the largest share of external liabilities is formed by loans from nonresidents.

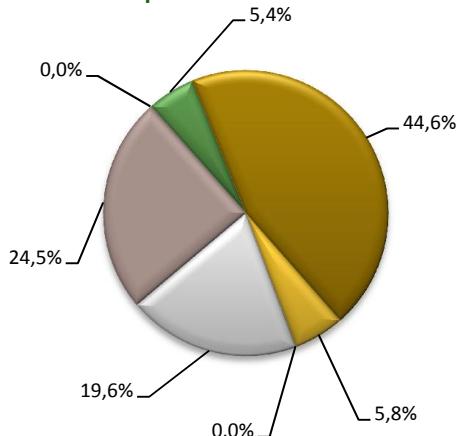

As of end of 2015, external liabilities of Other sectors amounted to 176.6 billion USD (or 89% of Kazakhstan's external liabilities).

## International Investment Position of Kazakhstan by residents' economic sectors

National Bank of Kazakhstan updated information on financial instruments classification ('equity', 'debt instruments', and 'other financial assets/liabilities') used in International Investment Position of Kazakhstan breakdown by residents' sector of economy. According to the Balance of payments and international investment position manual, 6th edition, 2009 (BOP6), monetary gold as part of reserve assets is referred to 'other financial assets'. According to the External Debt Statistics Guide (2014), unallocated gold accounts in monetary gold have debt origin and should be referred as 'debt instruments.' Therefore, after consultations with experts of International Monetary Fund, beginning from the period of the 1st quarter of 2005, National Bank of Kazakhstan has made reclassification of unallocated gold accounts from 'other financial assets' to 'debt instruments.'

in mln. of US dollars

**Gross inflow of direct investment in Kazakhstan from foreign direct investors includes:**

- increase of equity: purchase of at least 10% of the voting shares or shares in Kazakhstani enterprises by non-residents, purchase of real estate in Kazakhstan by non-residents;
- reinvested earnings: share of foreign direct investors in undistributed income (loss) in Kazakhstani enterprises;
- increase of debt instruments: flow of funds from foreign direct investors (both in cash and another form - as goods, services, intangible assets, purchase of securities and so on) without amortization.

\* On October 10th, 2010 the Netherlands Antilles stopped to exist as country within the Kingdom of the Netherlands. Curacao and Saint Martin became separate autonomies.

**Gross outflow of direct investment abroad from Kazakhstani direct investors includes:**

- increase of equity: purchase of at least 10% of the voting shares or shares in foreign enterprises by residents, purchase of real estate abroad by residents;
- reinvested earnings: share of Kazakhstani direct investors in undistributed income (loss) in foreign enterprises;
- increase of debt instruments: flow of funds from Kazakhstani direct investors (both in cash and another form - as goods, services, intangible assets, purchase of securities and so on) without amortization.

## External Debt of the Republic of Kazakhstan as of December 31, 2015

*External debt is the outstanding amount of the actual and unconditional liabilities of the country's residents to nonresidents at a particular point in time, which requires payment(s) of principal and / or interest.*

*For analysis purposes external debt indicator is presented with a sector breakdown. Governmental sector includes Government of the Republic of Kazakhstan (general government) and the National Bank of Kazakhstan (Central Bank).*

*External debt is the outstanding amount of the actual and unconditional liabilities of the country's residents to nonresidents at a particular point in time, which requires payment(s) of principal and / or interest. Meanwhile, the intercompany lending bears a certain level of conditionality, which is expressed by the dependence of terms of*

*principal and/or interest payments on the results of operating activities of the borrowers. In the context of external debt management, systemic risks of the state related to intercompany lending are estimated to be low since the creditor-direct investor shares the risk of insolvency of the borrower through their participation in the management of its activities. In this regard, the intercompany lending, including obligations of Kazakhstan's banks and enterprises to foreign direct investors, foreign direct investment enterprises, as well as foreign fellow enterprises, is presented separately in the structure of the external debt.*

*The analytical tables on external debt, including by sector breakdown and categories of financial instruments are listed in attachment to this note.*

### 1. External debt position of the Republic of Kazakhstan

On 31<sup>st</sup> of December 2015 the external debt of the Republic of Kazakhstan amounted to 153,5 billion US dollars (hereinafter – billion dollars), of which 8,0 billion dollars - the external debt of the "Banks" and 12,2 billion dollars – the external debt of the "Governmental sector". The rest is attributable to the debt of 'Other sectors' owed to affiliated nonresidents (the so-called "intercompany lending" – 81,8 billion dollars) and unaffiliated nonresidents (51,5 billion dollars) (Figure1).

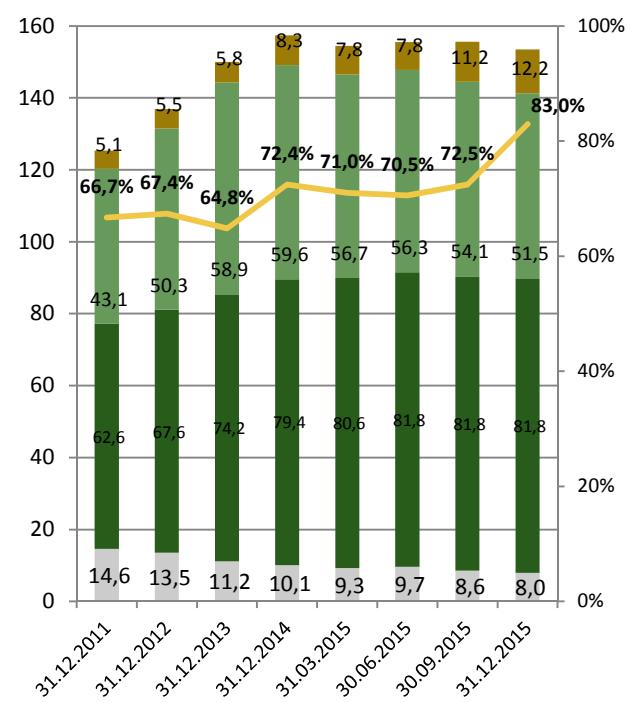

During 2015 the external debt shrank almost by 4 billion dollars (at 31 of December 2014 the external debt indicator was equal to 157,4 bln. dollars). The external debt of the governmental sector during the year increased by 2,1 billion dollars, debt of "Other sectors", excluding intercompany lending reduced by 8,1 bln dollars, and intercompany lending liabilities grew by 2,4 bln. dollars.

External debt structure by types of financial instruments has not undergone significant changes: it is still dominated by loans received from nonresidents (80%) and

debt securities, owned by nonresidents (12%) (Figure 2).

**Figure 1. Dynamics of external debt (billion US dollars)**

<span style="color: #808000;">█</span> Governmental sector <span style="color: #008000;">█</span> Intercompany lending <span style="color: #FFA500;">—</span> External Debt as % of GDP	<span style="color: #008000;">█</span> Other sectors <span style="color: #C0C0C0;">█</span> Banks
---	--

During the 4<sup>th</sup> quarter of 2015 the external debt declined by 2,2 billion dollars mainly as a result of carried out transactions (-0,9 billion dollars), price and exchange rate changes (-0,5 billion dollars) and other changes (-0,8 billion dollars). Taking into account total changes in position of external debt, the liabilities of the governmental sector increased by 1,0 billion dollars, sector "Banks" decreased by 0,6 billion dollars, «Other sectors» to nonaffiliated nonresidents dropped by 2,6 billion dollars, while intercompany lending liabilities slightly rose by 43 million dollars (Table 1).

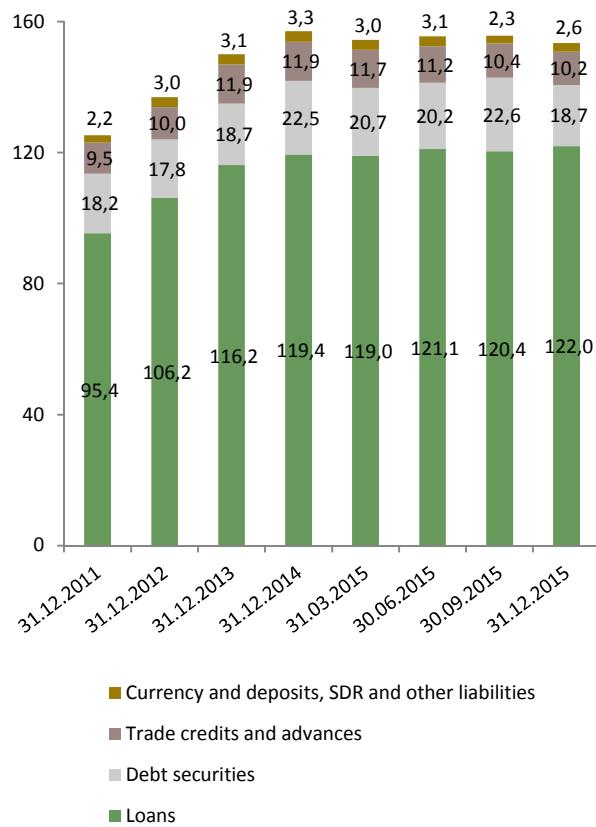

The main causes for revaluation changes of the external debt are loans denominated in currencies other than US dollar (exchange rate fluctuations) and debt securities (market price changes).

Liabilities in local currency account for only 3% of the external debt. Deprecation of tenge by 20% in the 4<sup>th</sup> quarter of 2015 reduced insignificantly the total external liabilities, but further exacerbated existing exchange rate vulnerabilities. The growing exposure to foreign exchange risk creates additional pressure on the external debt service by residents with income in national currency. The drop in foreign exchange earnings makes the service of external debt by export-oriented enterprises much harder as well.

In the two consecutive years the debt securities of Kazakhstan's residents generally

have a higher nominal than market value. At the end of the 4th quarter 2015 the difference between market and nominal value of debt securities by non-residents amounted to (-) \$ 1,2 billion, compared with (-) \$ 1,5 billion at September 30, 2015.

<sup>1</sup> as a result of fluctuations in price and exchange rate of financial instruments.

<sup>2</sup> changes in the value of assets that are neither to transactions nor revaluation, including those due to cancellation and write-offs, economic appearance and disappearance of assets, reclassifications, changes in financial volume arising from entities changing their economy of residence, as well as corrections of errors of previous periods

The market value exhibits high volatility and is able to change under the influence of a number of factors, such as changes in current market interest rates, the stability of the economy of the issuer, the type of coupon interest rate (fixed or variable), the remaining term to maturity. Also, an unexpected drop in the credit rating of the issuer (determined by international credit rating agencies such as Moody's, Standard & Poor's etc.) may have a large negative effect on the market value of securities, resulting in their "sell-off" by individual creditors, which provokes further reduction in the value.

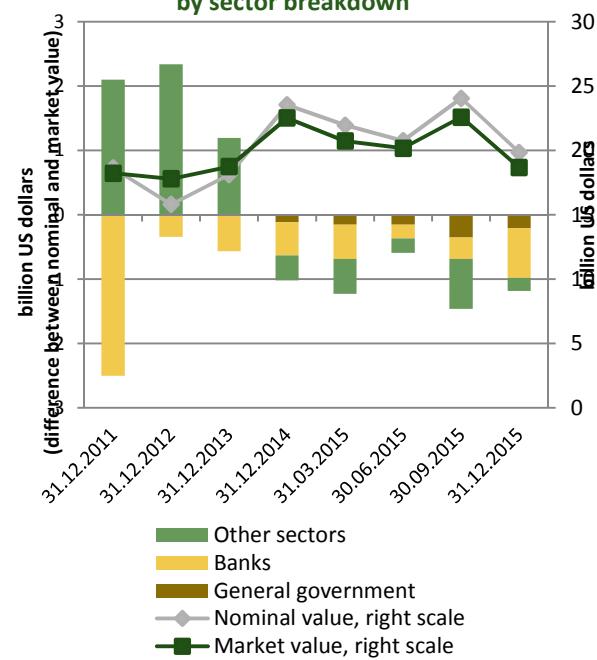

For the purposes of the compilation of the statistics of external liabilities debt securities in the hands of non-residents are assessed at market value. The change of external debt caused by revaluation is often short-lived, demonstrating the value of the financial instrument from the creditor's point of view, but it doesn't illustrate the size of existing debt which comes from borrower's perspective. In this regard, nominal value of debt securities is also published as memorandum articles of the standard presentation table of gross external debt (Figure 3).

An important indicator in the context of risk assessment of debt service is the ratio of short-term (up to one year) to total debt. At 31<sup>st</sup> of December 2015 the share of short-term liabilities was 4,2% (6,1% as on 31 of December, 2014). Short-term remaining maturity debt at 31.12.2015 (principal and interest debt with term of repayment within forthcoming year) was equal to 22,1 billion dollars.

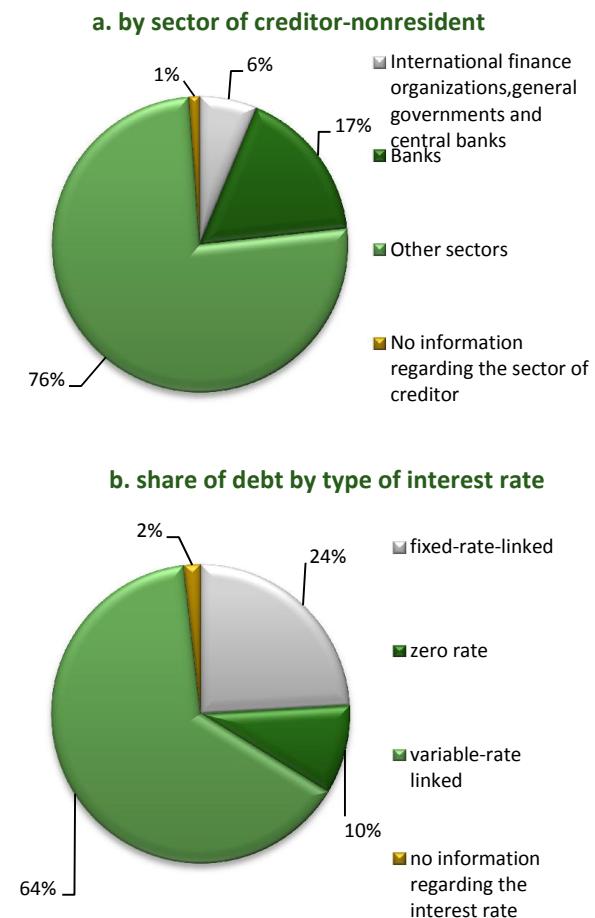

The main indicator of exposure to liquidity risk is the ratio of external debt on remaining maturity to international reserves, which according to "Guidotti–Greenspan rule" should not be less than 100%. Abiding this rule implies that in case of a crisis situation the country is able to service its debt obligations, at least for one year. That is, this indicator is a simple stress test on the stability of the debt burden in the short term. On December 31, 2015 the ratio of the reserve assets of the National Bank of

Kazakhstan to short-term external debt by remaining term to maturity resulted at 126,0%.

**Figure 3. Dynamics of debt securities changes in the market value to nominal by sector breakdown**

**Figure 4. External debt with the breakdown by sector of creditor and by type of interest rate**

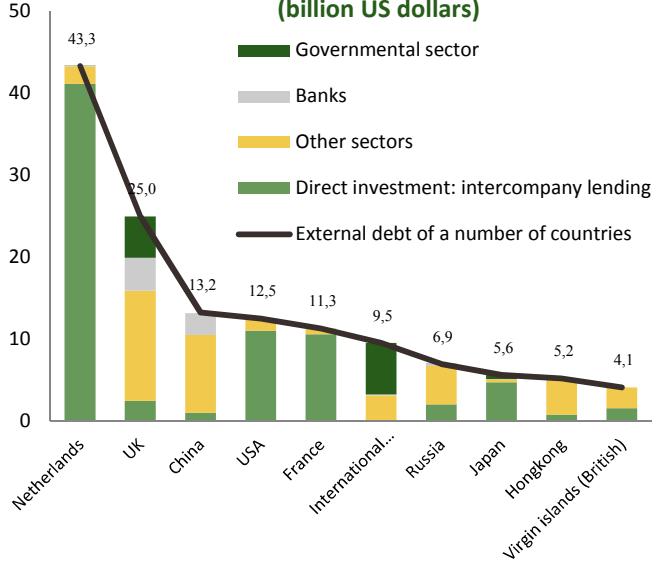

The main creditors of Republic of Kazakhstan are foreign banks, whose claims to residents equal to 26,0 billion dollars and other sectors of nonresidents (115,9 billion dollars), including intercompany lending - 81,8 billion dollars. Governmental sector's liabilities are mainly to international financial organizations<sup>3</sup> (5,1billion dollars) (Figure 4).

By the breakdown on type of interest payment, the prevailing share of external debt of the Republic of Kazakhstan (98,9 billion dollars) has a variable-linked interest rate, which bears a risk in creating more expensive debt service as a result of changes in market perceptions (Figure 4).

At the same time debt securities of Kazakhstan issuers generally have a fixed interest rate. Specifically for securities fixed interest rate creates more volatility, affecting the market value of the instrument itself in response to changing market conditions.

Regarding countries-creditors of Kazakhstan (Figure 5), almost a third of the external debt is to Netherlands (28%), primarily as intercompany lending; 16% - to Great Britain and 9% - to China, mainly to non-affiliates. Netherlands and the United Kingdom are financial centers, where capital transit (to other countries) happens to be, which decreases the country concentration risk of external debt of Kazakhstan.

**Figure 5. The external debt with the breakdown by sectors of debtors on a number of countries (billion US dollars)**

<sup>3</sup> debt securities, issued according to the laws of other countries and on their territory, are presented by the sector of trustee-nonresidents

## 2. Main changes in the structure of external debt

Active external borrowing by the Government of the Republic of Kazakhstan also from the international financial institutions led to accelerated growth of governmental external debt and debt guaranteed by the government, the share of which amounted to 8,4% in the total external debt (Table 2).

Given that in 2016 it is to be an additional attraction of loans to support counter-cyclical development of the country by the World Bank Group in the amount of 1 billion US dollars, an issue of Islamic securities, the growth trend of the external debt of the Government of Kazakhstan will continue.

The external debt of the **National Bank of Kazakhstan** increased by 25 million dollars as a result of rise in liabilities on correspondent accounts and deposits of nonresidents in the National Bank of Kazakhstan.

It should be noted that the liabilities of the "Central Bank" are mainly represented by special drawing rights (53,5% as of December 31, 2015).

**External debt guaranteed by the government** during the 4<sup>th</sup> quarter 2015 rose by 0,2 billion dollars mainly due to attraction of finances under the previously signed contracts.

Currently, the government guarantees are given to the funds involved in the implementation of projects for the reconstruction of electric networks of Kazakhstan, as well as the development of transport infrastructure.

The reduction of external debt of sector "Banks" by 0,6 bln US dollars in 4<sup>th</sup> quarter of 2015 was due to carried out transactions (-)0,6 bln dollars mainly long term deposits and debt securities of JSC "Development Bank of Kazakhstan", JSC "Kazkommertsbank" and exchange rate changes- (-)65,6 million US dollars mainly on short-term deposits and debt securities (Figure 6).

Table 2.

## External governmental sector debt and debt guaranteed by the government

(million US dollars)

	31.12.11	31.12.12	31.12.13	31.12.14	31.03.15	30.06.15	30.09.15	31.12.15
Governmental sector debt:	5 050,7	5 474,0	5 764,3	8 286,2	7 839,3	7 757,2	11 178,9	12 191,5
Government of the Republic of Kazakhstan	4 487,4	4 855,1	5 217,6	7 332,5	7 079,0	6 978,0	10 303,6	11 291,5
The National Bank of Kazakhstan	563,3	618,9	546,7	953,7	760,3	779,2	875,3	900,0
External debt guaranteed by the government (of "Other sectors")	442,0	470,6	495,2	416,3	530,0	518,6	475,7	665,7
<b>Total</b>	<b>5 492,7</b>	<b>5 944,6</b>	<b>6 259,4</b>	<b>8 702,5</b>	<b>8 369,3</b>	<b>8 275,8</b>	<b>11 654,6</b>	<b>12 857,2</b>

Cumulative external liabilities of “Other sectors” during 4<sup>th</sup> quarter of 2015 (to affiliated and nonaffiliated nonresidents) shrank by 2,6 billion dollars, also as a result of carried out transactions (-)1,2 billion dollars.

Given the objective worsening of conditions for service of debt obligations nominated in foreign currency in the 4<sup>th</sup> quarter there was an active reduction of existing external liabilities from public sector corporations (quasi-governmental enterprises) through redemption of debt securities by: JSC “National Company KazMunayGas”, JSC “Intergas Central Asia”, JSC “National company Food contract Corporation” and others, as well as due to the repayment of the loan of JSC “KazTransGas”, provided by international investment banks. At the same time, this decrease was partially offset by the attraction of syndicated loan by JSC “National Welfare Fund Samruk-Kazyna” in the amount of 1,5 US bln dollars.

Table 3 presents the external debt of “Other sectors” with the breakdown by relationship (whether the debt is created between affiliated parties) between lenders-nonresidents and borrowers-residents.

Figure 6. Dynamics of external debt of “Banks” (billion US dollars)

2. Debt liabilities of Kazakhstani direct investors to direct investment enterprises (reverse investment)	1 402,5	1 215,3	1 237,5	970,9	932,7	- 38,3
3. Debt liabilities of Kazakhstani enterprises to fellow enterprises	5 378,2	5 696,7	5 668,7	5 123,9	4 802,3	- 321,7

### 3. Absolute and relative parameters of the external debt

There was a contraction of gross domestic product (GDP) in dollar terms due to depreciation of local currency even though there was a nominal growth of GDP in tenge terms (Figure 7). This led to a worsening of relative parameters of external debt, linked to GDP, in spite of noticeable reduction of external debt. At 31 of December, 2015 the ratio of external debt to GDP amounted to 83,0% against 72,5% at the end of 3<sup>d</sup> quarter of 2015.

Continued worsening for the mentioned period of parameter exports of goods and services (EGS) led to a significant worsening of relative parameters of external debt to EGS. At the end of 4<sup>th</sup> quarter 2015 the ratio of external debt to EGS was 290,8%

against 258,5% at the end 3<sup>rd</sup> quarter of 2015.

However, as was noted above, the intercompany lending bears a certain degree of conditionality, which is expressed by the dependence of terms of principal and/or interest payments on the results of operating activities of the borrowers. Accordingly, international practice is accustomed to exclude intercompany lending in the analysis of absolute and relative parameters of the external debt of the country. The ratio of external debt to EGS, excluding intercompany lending was 135,7%.

The ratio of payments of interest on foreign long-term and short-term debt to exports of goods and services during the period is viewed as a measure of the solvency of the country. This ratio indicates the conditions for attracting external funds and, therefore, the debt burden (Table 4).

*Table 4.*

## Relative parameters of the external debt of the Republic of Kazakhstan (%)

	<b>31.12.2010</b>	<b>31.12.2011</b>	<b>31.12.2012</b>	<b>31.12.2013</b>	<b>31.12.2014</b>	<b>31.12.2015</b>
<b>External debt/GDP</b>	79,9	66,7	67,4	64,8	72,4	83

<b>Interest payments / EGS</b>	7,2	5,3	5,6	5,5	5,9	9,9

One of indicators of the debt burden in the context of the risk assessment of external debt is the evaluation of the debt concentration. High concentration of the debt burden on a particular group of residents increases the vulnerability of the debt sustainability of the country to a possible default of individual residents. The box below shows the evaluation of the concentration of external debt on the basis of the calculation of the Herfindahl-Hirschman index.

At 31 of December, 2015 the normalized index for sector "Banks" and intercompany lending showed a high concentration of debt burden.

*Table 5.*

## Normalized Index

Normalized index (HHI <sup>n</sup> )	31.12.2015
"Banks" sector	0,26
"Other sectors"	0,05
Intercompany lending	0,58

**Herfindahl-Hirschman index as the measurement of the concentration of the external debt**

One of the methods of calculating the concentration of the external debt is normalized Herfindahl-Hirschman Index (Index HHI<sup>n</sup>), which is used in economics to assess the degree of monopolization of the industry. In the context of external debt HHI<sup>n</sup> it can measure concentration by taking into account the volume of external liabilities of each company regarding the total external debt.

$$HHI^n = \frac{HHI - 1/n}{1 - 1/n}$$

$$HHI = \sum_{i=1}^n \frac{(\text{share of external liabilities of } i)^2}{\text{to total debt of } i}$$

n- number of residents with external liabilities >0

The normalized index tends to zero when the debt burden is distributed evenly among the residents. The index of between 0,1 and 0,18 points to the average concentration of external liabilities, in excess of 0,18 - external liabilities are concentrated within a limited group of residents, which consequently creates an additional threat to the country's stability in the event of default of any the representative of the group.

Debt service schedule includes projected repayments of the principal on gross external debt outstanding on 31.12.2015 - row "Principal" and the projected future payments of interest - row "Interest", which will be accumulated by 31.12.2017 on the principal amount outstanding, taking into account its projected repayments

"Banks" - liabilities by correspondent and current accounts, call deposits of nonresidents and arrears

The sector "Banks" includes commercial banks and the Development Bank of Kazakhstan.

The article "Other sectors" does not include Intercompany lending, which is presented as an independent article in the External Debt structure

The part of the external debt, on which National Bank does not have repayment schedule, is shown:

- the debt outstanding on long term trade credits and loans is included in the "no information" column;
- the short term debt outstanding on trade credits and loans is equally split between four consecutive quarter, following the reporting date (31.12.2015)

<sup>2</sup> changes in the value of assets that are neither to transactions nor revaluation, including those due to cancellation and write-offs, economic appearance and disappearance of assets, reclassifications, changes in financial volume arising from entities changing their economy of residence, as well as corrections of errors of previous periods

## The results of the monitoring of non-state external financial loans under the terms of contracts signed during 2015

*Monitoring of non-state external financial loans of the private sector is based on registration and notification regimes of non-guaranteed state loans by residents. In accordance with the currency legislation, the notification regime includes the provision of information regarding the loan agreement to the National Bank of Republic of Kazakhstan, while registration regime also requires a supply of a copy of the corresponding contract, which helps to build a more detailed pattern of external borrowing of the private sector. The notification regime applies to own operations of Banks, registration regime - to other subjects - economic units (other financial, non-financial as well as non-profit organizations and households). Meanwhile both regimes apply to loans with a maturity of more than 180 days and with the sum of more than five hundred thousand US dollars.*

*This analysis is based under the terms of contracts and additional agreements signed during 2015 and registered/notified in National Bank of Republic of Kazakhstan (hereinafter – NBK) by the mid of March of 2016*

*The structure of estimate attraction of loans according to contracts by maturity, interest rate, currency of loans, relationship between lender and borrower, creditor countries, industries and sectors of borrowers is given in Appendix 14.1 - 14.9.*

The dynamics of estimate external borrowing have resulted from instability of the prices of energy under the terms of contracts for Kazakhstan 2015 resources on global markets. year slightly improved compared with 2014 year. Meanwhile 2011 level of estimate loans' attraction remains minimal for the period 2007-2015, which is the signal that 2015 shows a continued recovery of demand for external borrowing from abroad by residents. Nevertheless, it might, like in 2014, also be just an outcome of previously reached agreements, including on some projects within national program of forced industrial and innovative development of the Republic of Kazakhstan.

At the same time, from supply side, there might be other reasons for the attraction of external borrowing by these groups of sectors such as both an existence of limited access to cheap foreign credits within the country and total absence of the possibility of borrowing in needed amounts on local markets (Diagram 1).

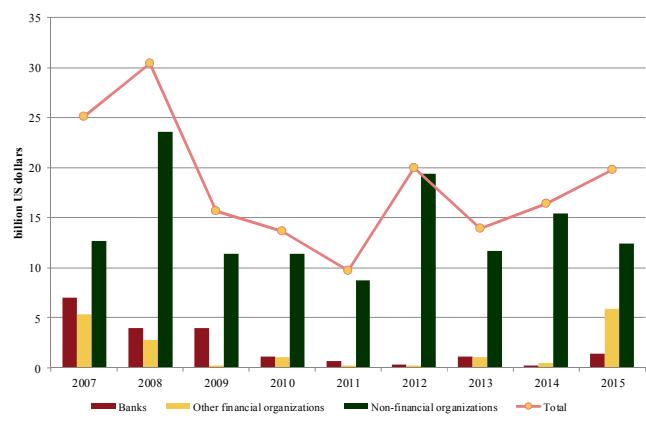

The sector of Non-financial organizations in 2015 shows a decrease of borrowings compared to 2014.

**In terms of economic sectors of borrowers** in the period 2007-2012 y. Banks<sup>1</sup> showed a steady decline in external borrowing, though in 2013 there was a slight recovery, but in the year of 2014 the attraction of borrowing of the sector showed minimal level since the year of 2007-0,2 billion US dollars. Despite that, within the 2015-year agreements there was the borrowing growth of the sector "Banks" – 1,4 billion US dollars.

A similar situation is observed in the sector of other financial organizations- 5,9 billion US dollars in 2015 against 0,4 billion US dollars in 2014.

From demand side, increase in external borrowing for banks and other financial institutions mostly occurred due to a change in perception of risk associated with borrowing from abroad, which might

**Diagram 1. The volume of estimate loans' attraction under the agreements of 2007-2015 years by principal sectors of borrowers (Kazakhstan)**

<sup>1</sup>Including second-tier banks and JSC "Development Bank of Kazakhstan"

**In the structure of estimate loans' attraction by sector of borrowers**, the real sector<sup>2</sup> remains the main driver of growth in external borrowing - 63% of the total sum in 2015, against 95% in 2014, the Banks' share in 2015 was 7% versus 1,5% in previous year.

**Regarding the number of contracts:** there were 837 contracts of financial loans attracted by residents from nonresidents registered in 2015. The greatest number of contracts was signed by non-financial organizations (709) (Table 1).

**Regarding the breakdown by quarters,** the greatest increase in terms of external borrowing occurred in the 4<sup>th</sup> quarter, due to an increase in borrowing by other financial institutions and real sector. Banking sector mainly borrowed in the 1<sup>st</sup> quarter of 2015 (Diagram 2).

With the regard of a **breakdown by sector of creditors** while in 2012 main creditors of residents were mostly foreign banks (58% of the total), in 2014, like in 2013, most of the estimate external borrowing came from foreign non-financial organizations (50% and 53 % of the total, respectively). Within 2015-year agreements households, non-financial organizations, and banks became the main creditors of Kazakhstan's economics presenting 34%, 29%, and 27% of the total borrowing respectively, while other financial institutions and international financial organizations each provided 5% of the total borrowing.

Regarding the creditor-borrower relationship, 43% of the estimate borrowing is provided intercompany lending where the main creditors are households and non-financial organizations. (Diagram 3).

**Regarding the breakdown by term of estimate attraction of loans** in 2015 the share of medium-term estimate external borrowing (from 1 to 3 years – 40% and from 3 to 5 years – 24%) and long-term loans (over 5 years – 29%) prevailed. In 2014, as well as in 2013, mainly long-term financing was popular (for a period of more than 5 years - 43%, 47%, respectively). Short-term loans (up to 1 year, inclusively) in 2015 accounted only for 7% of the total estimate attraction of loans, in 2014 – 8%.

Economic sector	2007	2008	2009	2010	2011	2012	2013	2014	2015
Banks	7,0	3,9	3,9	1,2	0,7	0,3	1,1	0,2	1,4
Other financial organizations	5,4	2,8	0,2	1,0	0,2	0,2	1,0	0,4	5,9
Nonfinancial organizations	12,7	23,6	11,4	11,4	8,7	19,4	11,7	15,4	12,4
Total	25,1	30,4	15,7	13,7	9,7	20,0	13,9	16,4	19,8

Table 1. Number of signed contracts in 2015 quarterly

Diagram 2. The volume of the estimate attraction of financial loans under signed contracts in 2015 in the context of economic sectors of borrowers (Kazakhstan)

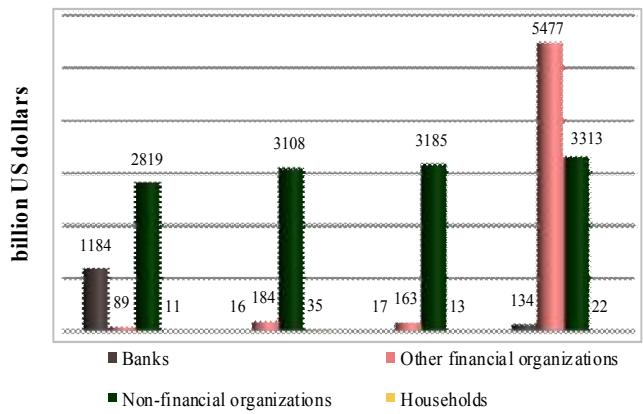

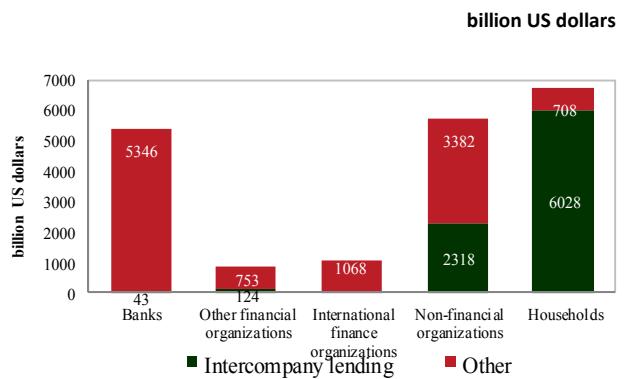

Diagram 3. The volume of the estimate external borrowing of financial loans based on signed contracts in 2015 by sector of creditor and creditor-borrower relationship

<sup>2</sup>The real sector includes non-financial organizations and households

The main creditor for short-term (up to 1 year) and long-term loans (over 5 years) is non-financial institutions (81% of the total estimate of external borrowing attracted for a period less than a year and 43% of the amount of borrowing for a period over 5 years).

The medium-term borrowing was mainly provided by banks and households (from 1 to 3 years - 74% presented by households, from 3 to 5 years - 66% presented by banks) (Diagram 4).

**With the breakdown by interest rates** in general, the share of interest-free loans in 2015 was around 7% of the estimated volume of loans' attraction compared to 18% in 2014, loans with variable and fixed interest rates were 35% and 50%, respectively, versus 31% and 51% in 2014 (Diagram 5).

Unlike 2012 and 2013, where the majority of loans involved financing with variable interest rate, in 2015, like in 2014, the external borrowing with fixed interest rate was mostly popular.

93% of the borrowing with fixed interest rate was given at a rate of less than 10%, 45% of which with a range from 0% to 5%. 3% of fixed-rate-linked loan attraction had an interest rate of 10-13% and 1% had an interest rate of 15% or more.

This statistic might indicate that in 2015 residents attracted relatively inexpensive borrowing, which may be a result of a more cautious borrowing policy by residents-debtors.

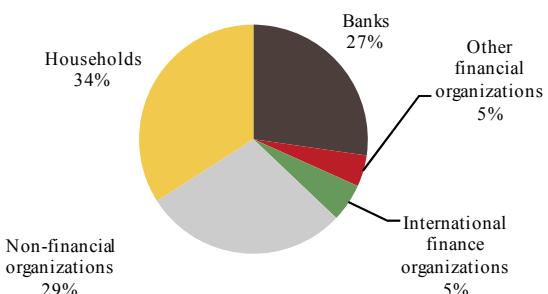

It is interesting to note that in 2015, as in 2014, the whole non-state sector mainly borrowed with fixed interest rate, in contrast to 2012 and 2013, where the fixed-rate external borrowing was favored only by banks (Diagram 6).

In 2015, the borrowing with variable interest rate was also popular (31% of the amount of attraction). Meanwhile non-financial institutions remain the principal attractor of loans with this type of interest rate. That is, non-financial organizations attracted 31% of total loans with variable interest rate, or 49% of the total amount of funds raised by non-financial organizations, which accounts for 88% of the total attraction of variable-rate-linked loans.

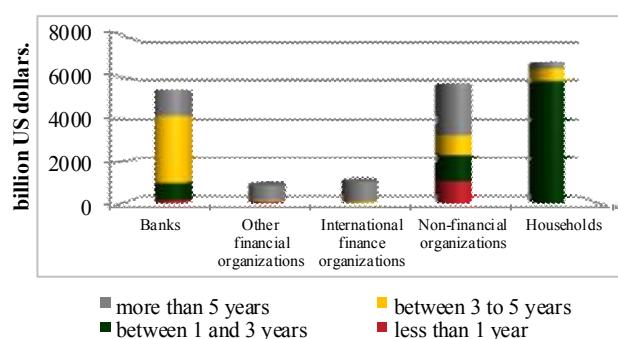

Relative popularity of borrowing with a variable rate of interest may be caused by two factors:

*for lenders* - the rate based on the fluctuation of certain parameters provides insurance against shocks associated with these fluctuations;

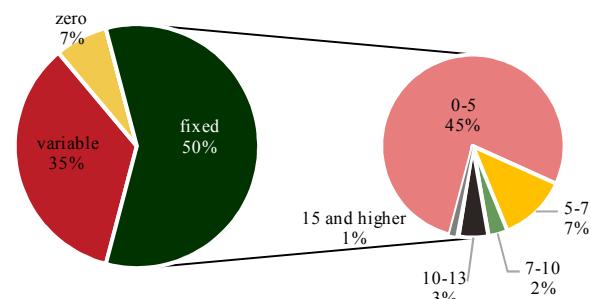

**Diagram 3. Continuation**

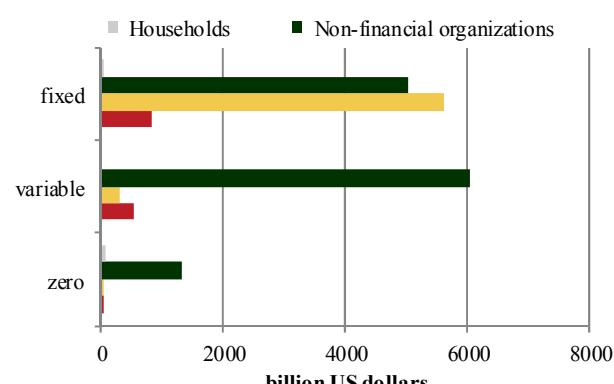

**Diagram 4. The volume of the estimate attraction of financial loans under contracts signed in 2015 with the regard of term of loans**

**Diagram 5. The volume of the estimate attraction of financial loans under contracts signed in 2015 by the type of interest rate**

**Diagram 6. The volume of the estimate attraction of financial loans under contracts of 2015 by interest rates and economic sector of the borrower (Kazakhstan)**

for borrowers – currently borrowing with variable-interest rates provides an opportunity to attract cheaper foreign funds, because majority of reference indices for variable interest rate, such as Libor and Euribor<sup>4</sup>, at the moment are at their minimum level (Diagram 7).

Regarding the movement of reference indices for variable-interest rates throughout 2015 there was a gradual declining trend for Euribor with values going negative (-0,04% on 30.12.2015). In contrast, Libor reference indices were relatively stable during the year with the shallow trend of increase observed at the end of the reporting period.

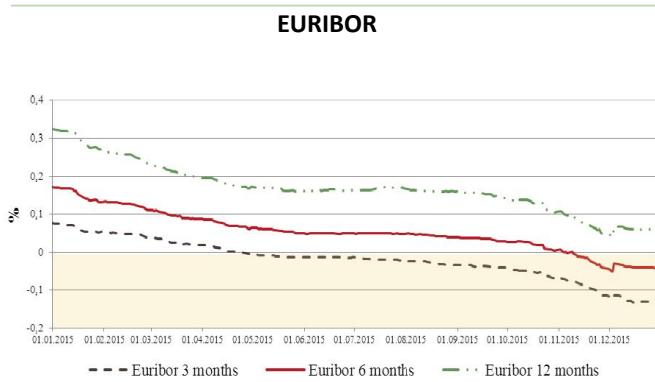

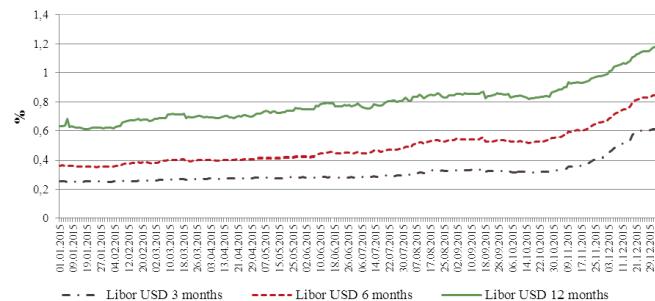

Variable-rate-linked external borrowing bears the risks associated with fluctuations in reference indices. The sharp increase in the value of the reference index may create an unfair burden of debt service for residents. In addition, the loans also carry risks associated with exchange rate fluctuations because the prevailing share of the loans is in foreign currency.

In 2015, the following reference indices were used in determining the conditions for interest rates in the contracts of external borrowing: Euribor (3m, 6m, 12m), Libor (1m – 12 m), Libor eur (1m, 3m), Libor JPY 12m, Kibor, Swap, refinancing rates of foreign central banks, the refinancing rate of the NBK.

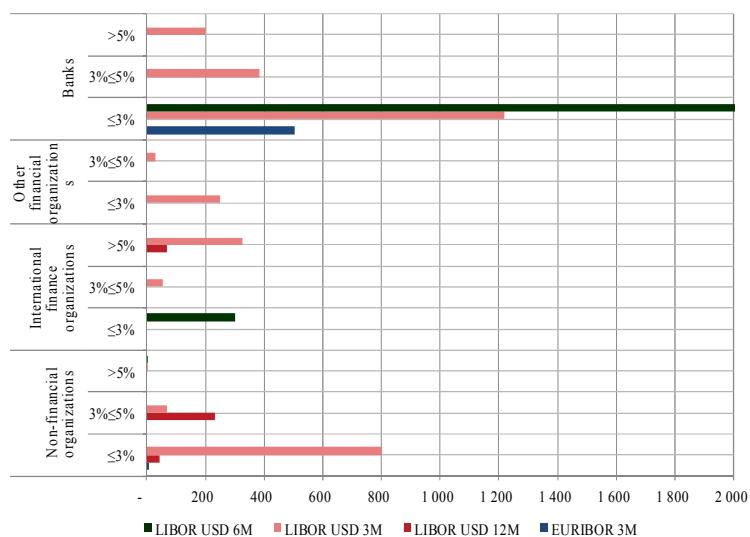

The most preferred reference indices among them were libor usd-3m, libor usd-6m, and libor usd-12m. The total volume of external borrowing with Libor group of reference indices accounts for 90% of total sum of attracted variable-rate-linked loans, among which in Libor group using libor 3m usd reference index was attracted 3333 million US dollars (48% of the total of attracted variable-rate-linked loans) in 2015 versus 3337 (68%) in 2014; with libor usd-6m reference index - 2327 (34%) against 810 million US dollars (16%), respectively, and libor usd-12m reference index - 347 million US dollars (5%) versus 547 (11%), respectively (Diagram 8).

Euribor which accounts for 9% of the total sum of attracted variable-rate-linked loans is another most commonly used group of reference indices. Among this group in 2015 Euribor 3m should be noted - 509 million US dollars (7%) against 192 million US dollars (4%) in 2014.

**Diagram 7. Dynamics of Libor and Euribor reference indices in 2015 y.**

**Diagram 8. The volume of the estimate attraction of financial loans with variable interest rate by main reference indices, margins and sector of creditor**

The rest of reference indices account in total for 28 million US dollars (0,4%) of estimate external borrowing.

The volume of variable-rate-linked estimate attraction of loans with zero-margin in 2015 amounted to only 15 million US dollars (0,2% of total variable-rate-linked sum of loans). External borrowing with positive margin amounted to 6 868 million

<sup>3</sup>The London Interbank Offered Rate (LIBOR) is the average interest rate estimated by leading banks in London that the average leading bank would be charged if borrowing from other banks

<sup>4</sup>Euribor is short for Euro Interbank Offered Rate. The Euribor rates are based on the average interest rates at which a large panel of European banks borrow funds from one another in euro.

US dollars (35% of total variable-rate-linked sum of loans) against 5186 million dollars (31%) in 2014. The margin range for 2015 as well as for 2014 was between 0-10%. 76% of total variable-rate-linked sum of loans was borrowed with a margin between 0-3%, 13% with a margin between 3-5% and 11% with a margin of more than 5%.

With the regard of breakdown by sector of creditors, the most popular among foreign banks as well as non-financial organizations was a margin between 0 to 3% and between 3% to 5%, other financial institutions provided borrowing mainly with a margin of 0-3%, while international financial organizations mostly had a margin over 5% (Diagram 8).

**In the currency structure** of estimate attraction of loans the external borrowing in euros and US dollars remains dominant, which might indicate the preference of creditors-nonresidents to lend funds in a relatively stable currency.

Most of the variable-rate-linked borrowing (99% of the total volume of financial loans with variable interest rate) is in these currencies.

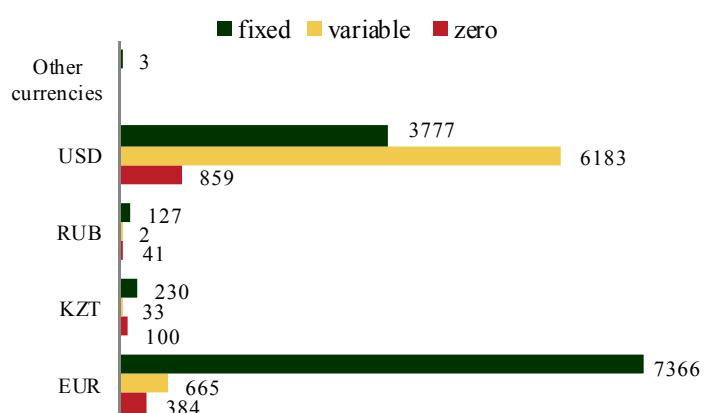

Under the contracts signed in 2015, the share of external borrowing in USD was 55% of total estimate external borrowing against 74% and 62% in 2014 and 2013 respectively.

The external borrowing in euro was equal to 43% of total sum of estimate borrowing against 21% in 2014 and 2013. The weight of tenge in the sum of estimate borrowing was 2% against 4% in 2014 year.

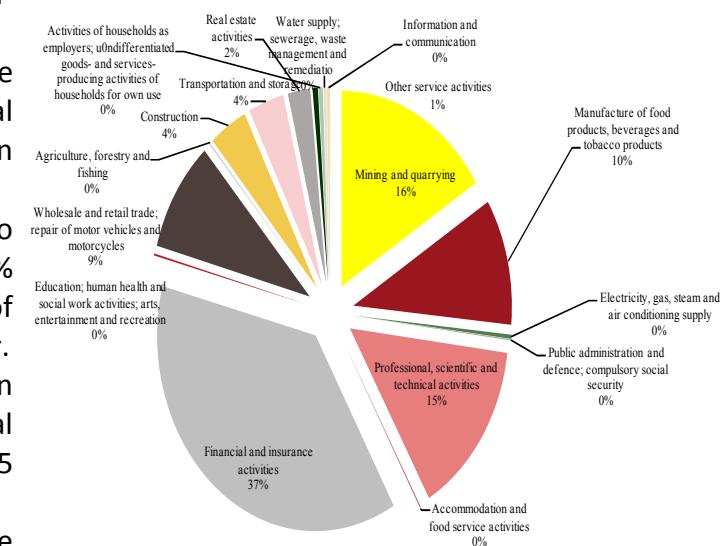

Other currencies: Russian rubles, Canadian dollars, Korean won and so forth occupied in total around 0,9% of sum under contracts signed in 2015 (Diagram 9).

Considering the industrial structure of the residents-borrowers (Diagram 10) it should be noted that under the contract signed in 2015 (as well as in previous years), a significant proportion of the estimated borrowing had the following industrial sectors: financial and insurance - 37%, mining and quarrying (mainly due to extraction of crude petroleum and natural gas and mining of the metal ores) - 16%; professional, scientific and technical activities (mainly because of geological exploration and prospecting activities) - 15%; manufacturing (mainly due to the metallurgical industry and manufacture of basic metals and fabricated metal products, except machinery and equipment) - 10%; wholesale and retail trade,

**Diagram 9. The volume of the estimate attraction of financial loans under contracts signed in 2015 by currency and type of interest rate**

**Diagram 10. The volume of the estimate attraction of financial loans under contracts signed in 2015 by sector of industry of borrower**

repair of motor vehicles and motorcycles - 9%, construction - 4%.

**In the geographical structure** of non-governmental external loans' contracts in 2015 the overall lending leader was Iran (28% of total loans, mainly from households), China (9%, mainly from banks), and the Russian Federation (5%, mainly from affiliated non-financial institutions).

European markets also were significant creditors (Diagram 11), due to the fact that contracts were signed by residents with companies from the United Kingdom (15% of the total estimated borrowing, mainly from banks and non-financial institu-

tions), the Netherlands (7%, mainly from affiliated non-financial institutions), Germany (mainly from non-financial institutions and households), and Switzerland (2% mainly from other financial organizations).

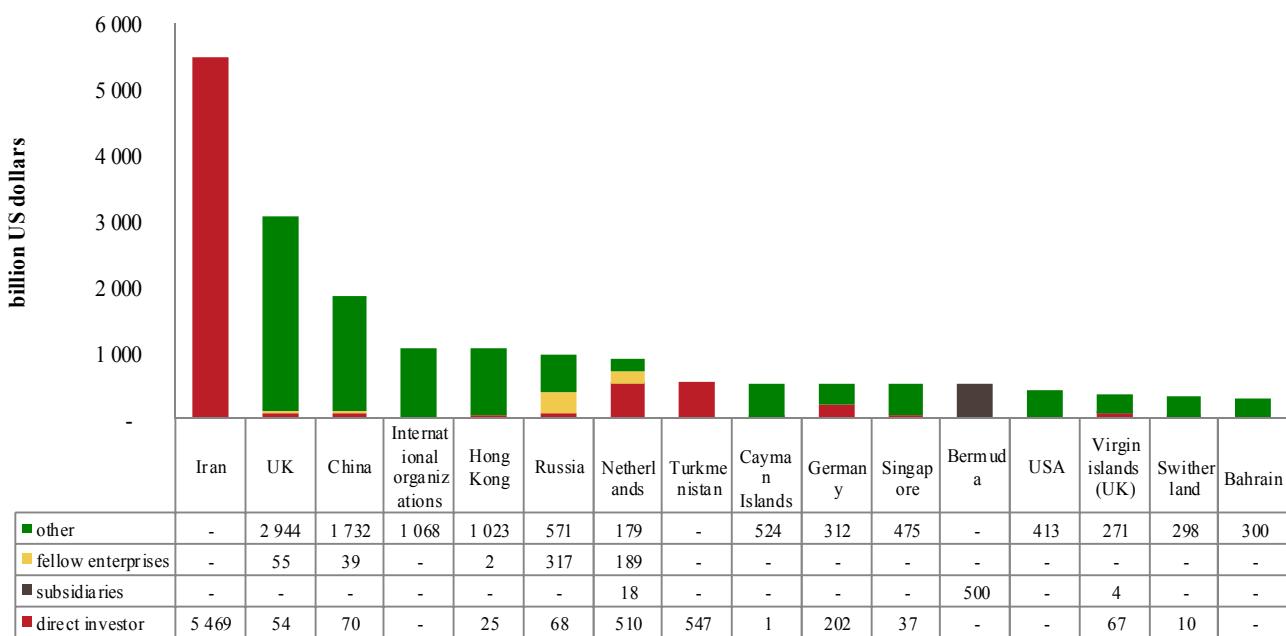

In addition, offshores should be mentioned - Hong Kong (5%, mainly from non-financial organizations) and the Virgin Islands (2%, mainly from non-affiliated non-financial organizations).

In general, the market for external borrowing in 2015 continues to be attractive to residents of Kazakhstan. However, loans are not always provided at favorable conditions: the main share of external borrowing from the real sector is in foreign currency with a fixed interest rate on a medi-

um and long-term period, 77% of which is for the term over 3 years. The main currency of external credit is the US dollar, this creates certain risks to the private sector with respect to US dollar exchange rate fluctuations, while variable-rate-linked borrowing is also being exposed to fluctuations of reference indices.

Kazakhstan's financial sector in 2015 compared with previous years clearly demonstrated slight improvement in demand for external borrowing, possibly due to the necessity of attracting new loans, with the regard of the unstable economic situation in the region observed in the second half-year of 2015.

**Diagram 11. The volume of the estimate attraction of financial loans under contracts signed in 2015 by countries of lenders**

**The sum of estimate attraction of loans according to contracts, signed during 2015**

The following information is based on financial loans of residents from nonresidents. The conditions of the included loans are as follows: the sum is more than 500 thousand dollars, time period – longer than 180 days, under the terms of contracts and additional agreements signed during 2015 and registered in National Bank of Republic of Kazakhstan by the end of March of 2016

**List of the main changes to the balance of payments and the international investment position of the Republic of Kazakhstan for the previous periods**

The table 1 and 2 presents the main data changes presented in this publication in comparison with the data for 2013 and 2014 that was formed on March 31, 2015, and for the 1st and 3rd quarter of 2015 that was formed on December 31, 2015.

Changes to the data by less than 10 million dollars per quarter are due to the clarification of the reported data that was used during the compilation of the article.

**Table 1  
Changes to the Balance of Payments**

Name of the indicators in standard presentation of BOP	Period	The amount of changes, mln. US dollars	Reason for change
Goods – Exports	2014 I-IV q.	1182,5	specification of reporting data by the authorized agency
Goods – Imports	2014 I-IV q.	119,2	specification of reporting data by the authorized agency
Services – Travel – Credit	2013 I-IV q. 2014 III-IV q.	178,1 146,4	specification of data about of the number of persons crossing the state border
Services – Construction – Credit	2014 III-IV q. 2015 II-III q.	59,0 27,0	specification of reporting data
Services – Other business services – Credit	2015 I q.	-14,4	specification of reporting data
Services – Travel – Debit	2013 I-IV q. 2014 I-IV q.	243,5 245,1	specification of reporting about of the number crossing the border
Services – Construction – Debit	2014 IV q.	-81,7	specification of reporting data
Services – Other business services – Debit	2014 IV q. 2015 III q.	-20,3 36,6	specification of reporting data
Primary income – Direct investment – Interest – Credit	2014 I-IV q.	17,3	specification of direct investment relationship (from other investments)
Primary income – Other investment – Interest – Credit	2014 I-IV q.	-20,6	specification of direct investment relationship (from other investments)
Primary income – Direct investment – Income on equity and investment fund shares – Debit	2014 I-IV q. 2015 I-III q.	-190,7 370,2	specification of data about the net and paid income of enterprises which used in the calculation of reinvested earnings
Secondary income –General government – Credit	2013 I-IV q. 2014 I-IV q. 2015 I-III q.	329,1 362,4 -46,8	2013-2014 – changes of information source which used in the assessment of taxes on non-resident individuals 2015 – reporting data from the authorized agency
Direct investment – Net acquisition of financial assets – Debt instruments	2013 I-IV q. 2014 I-IV q. 2015 I-III q.	-35,5 657,3 114,6	specification of reporting data and specification of direct investment relationship (from other investments)
Direct investment – Net incurrence of liabilities – Equity other than reinvestment of earnings	2014 III-IV q. 2015 III q.	-140,8 -13,7	specification of reporting data and information about the cost of the Kazakhstans' enterprises in transactions for redemption by residents
Direct investment – Net incurrence of liabilities – Reinvestment of earnings	2014 I-IV q. 2015 I-III q.	-328,2 335,1	specification of the net and paid income enterprises which used in the calculation of reinvested earnings
Direct investment – Net incurrence of liabilities – Debt instruments	2013 I-IV q. 2014 I-IV q. 2015 I-III q.	64,5 -40,3 72,7	specification of reporting data and specification of direct investment relationship (from other investments)
Portfolio investment – Net acquisition of financial assets – Debt securities – General government	2014 IV q.	223,6	specification of reporting data
Portfolio investment – Net acquisition of financial assets – Debt securities – Other sectors	2015 II q.	-51,0	specification of reporting data

Portfolio investment – Net acquisition of financial liabilities – Debt securities – Other sectors	2015 II-III q.	-86,0	specification of reporting data
Other investment – Net acquisition of financial assets – Currency and deposits – Banks	2015 III q.	-150,0	specification of reporting data
Other investment – Net acquisition of financial assets – Currency and deposits – General government	2014 IV q.	14,1	specification of reporting data
Other investment – Net acquisition of financial assets – Currency and deposits – Other sectors	2015 III q.	97,5	specification of reporting data
Other investment – Net acquisition of financial assets – Loans – Other sectors	2013 I-IV q. 2014 I-IV q. 2015 I-III q.	35,2 -587,6 67,0	specification of direct investment relationship (from other investments)
Other investment – Net acquisition of financial assets – Trade credit and advances – Other sectors	2014 IV q.	-134,7	specification of reporting data
Other investment – Net acquisition of financial assets – Other accounts receivable/payable – Banks	2015 III q.	-165,0	specification of reporting data
Other investment – Net acquisition of financial assets – Other accounts receivable/payable – Other sectors	2014 III-IV q. 2015 III q.	49,8 37,0	specification of reporting data
Other investment – Net incurrence of liabilities – Loans – Other sectors	2013 II-III q. 2014 III-IV q. 2015 III q.	-31,6 199,5 33,1	specification of reporting data and specification of direct investment relationship (from other investments)
Other investment – Net incurrence of liabilities – Trade credit and advances – Other sectors	2014 III-IV q.	-16,8	specification of reporting data
Other investment – Net incurrence of liabilities – Other accounts receivable/payable – General government	2013 I q. 2014 I q.	-32,5 -33,6	specification of reporting data
Other investment – Net incurrence of liabilities – Other accounts receivable/payable – Other sectors	2013 II q. 2014 IV q.	-31,8 56,7	specification of reporting data
Reserve assets – Other reserve assets – Currency and deposits	2014 IV q.	334,8	specification of data including final turnovers

## Methodological commentary to the balance of payments and the international investment position

The international accounts for an economy summarize the economic relationships between residents and nonresidents. They comprise the following<sup>1</sup>: the balance of payments (BOP), International Investment Position (IIP), and other changes in financial assets and liabilities accounts.

The international accounts provide an integrated framework for the analysis of an economy's international economic relationships, including its international economic performance, exchange rate policy, reserves management, and external vulnerability.

From the first quarter of 2013, Kazakhstan's balance of payments, international investment position and external debt is compiled in accordance with the sixth edition of "Balance of Payments and International Investment Position Manual" (BPM6). The main changes are connected with transition to the new methodology compilation of statistics provided in the Appendix IV.4.

### **Methodological commentary to the balance of payments**

The balance of payments is a statement that summarizes economic transactions between residents and nonresidents during a period.

Compilation and evaluation of BOP is conducted based on the BPM6 in accordance with standard accounting rules and definitions.

#### **Main BOP compilation rules and definitions:**

- recording of transactions between residents and nonresidents;
- recording of transactions according to double-entry system;
- recording of flows rather than stocks;
- valuation of transactions and transfers denominated in different currencies in a single unit of account;
- recording of transactions at the time of the change of ownership;
- recording of transactions by type and by sector.

<sup>1</sup> External debt is often attributed to the external sector statistics. Standard report on external debt is a structural part of the IIP, but due to its important analytical value, the external debt is usually regarded as a separate component of the external sector statistics.

**Residents and nonresidents.** Each institutional unit is a resident of one and only one economic territory with which it has the strongest connection, expressed as its center of predominant economic interest. An institutional unit is resident in an economic territory when there exists, within the economic territory, some location, dwelling, place of production or other premises on which or from which the unit engages and intends to continue engaging, either indefinitely or over a finite but long period of time, in economic activities and transactions on a significant scale.

Flows refer to economic actions and effects of events within an accounting period. International flows are recorded in the accounts as transactions or other changes in financial assets and liabilities. Flows reflect the creation, transformation, exchange, transfer, or extinction of economic value; they involve changes in the volume, composition, or value of an institutional unit's assets and liabilities.

#### **Double-entry system**

A transaction is an interaction between two institutional units that occurs by mutual agreement or through the operation of the law and involves an exchange of value or a transfer.

Each transaction involves two entries – a credit and a debit entry – for each party to the transaction. This principle ensures that the total of all credit entries and that of all debit entries for all transactions are equal, thus permitting a check on consistency of accounts for a single unit.

In the current and capital accounts, a credit denotes entries from exports, primary income receivable, transfers receivable, and disposals of nonproduced nonfinancial assets. A debit is used to record entries for imports, primary income payable, transfers payable and acquisitions of nonproduced nonfinancial assets.

In the case of transactions in financial assets and liabilities, the terms "net acquisition of financial assets" and "net incurrence of liabilities" are used. The interpretation of increase (decrease) under the credit or debit notion depends on whether the increase (decrease) refers to assets or liabilities (a debit for an asset is an increase, a debit for a liability is a decrease).

In accordance with the double-entry basis of BOP statistics, each transaction is recorded as

consisting of two entries where the sum of credit entries equals the sum of debit entries.

**Transactions registration time** is determined according to the accrual basis. Transactions are registered at the time when economic value is created, transformed, exchanged, transferred or extinguished. The emergence of financial claims and liabilities is associated with the change of ownership right for any resources from one party of an international transaction to another. Such a transition can be legalized, and may involve the actual transfer of resources or establishment of control over these resources by the other party. In the case of non-obvious transition of economic ownership right, the transition is considered to occur when parties of the transaction record it in their books or accounts.

Changes in the volume of assets and liabilities that occur as a result of transactions are recorded in the BOP. The BOP transactions involve both transactions that are accompanied by actual payments and those that do not involve cash payments.

**Valuation of transactions.** Transactions are valued at their actual market price recorded in contracts and agreements between independent parties of the transaction.

International accounts are formed for the following sectors: the central bank, banks (deposit-taking corporations except the central bank), general government, and other sectors including other financial corporations and nonfinancial corporations, households and nonprofit institutions serving households (NPISHs). Classification and sectorization systems meet international standards.

### Main BOP accounts

Standard BOP structure consists of the following accounts: the current account (the goods and services, the primary income, the secondary income), the capital account and the financial account.

**The current account** shows flows of goods, services, primary income, and secondary income between residents and nonresidents. The current account balance shows the difference between the sum of exports and income receivable and the sum of imports and income payable (exports and imports refer to both goods and services, while income refers to both primary and secondary income).

The current account and capital account exclude the use of a "minus" sign while showing imports of goods and services as well as primary and secondary incomes paid. At the same time, the balance of relevant accounts (goods, services, primary income and secondary income) is defined as the difference between the credit and the debit entries.

### Current account:

Main components of the "**Goods**" account are export and import of goods on a balance of payments basis, net exports of goods under merchanting, nonmonetary gold.

**Nonmonetary gold** covers all gold other than monetary gold. In its turn, monetary gold is a financial asset that is not created by an instrument and that does not represent a claim on another entity and acts as a means of international payments and store of value for use in reserve assets.

Export and import of general merchandise on a balance of payments basis covers goods (as well as re-export), whose economic ownership is changed between a resident and a nonresident and that are not included in the following specific categories: goods under merchanting, nonmonetary gold, parts of travel, construction, and government goods and services not included elsewhere.

**Re-exports** are foreign goods (goods produced in other economies and previously imported) that are exported with no substantial transformation from the state in which they were previously imported.

**Merchanting** is defined as the purchase of goods by a resident (of the compiling economy) from a nonresident combined with the subsequent resale of the same goods to another nonresident without the goods being present in the compiling economy.

The difference between sales over purchases of goods for merchanting is shown as the item "net exports of goods under merchanting". As a result of losses or increases in inventories, net exports of goods under merchanting may be negative in some cases.

Nonmonetary gold in the form of bullion or other forms is shown as a separate article in the goods.

**Services** cover the services that are performed by residents for nonresidents and vice versa. The following types of services are included in the BOP: manufacturing services on physical inputs owned by others; maintenance and repair

services; transport (including postal and courier services); travel; construction; insurance and pension services; financial services; charges for the use of intellectual property not included elsewhere; telecommunications; computer and information services; other business services; personal, cultural, and recreational services; government goods and services not included elsewhere.

In accordance with the balance of payments basis, the time of recording of service entries in the international accounts is the time at which the service is delivered. The provision of services should be recorded on an accrual basis in each accounting period, i.e. they should be recorded as they are rendered. To the extent that the time of payment differs from the time of delivery, there may be trade advances (financial assets and liabilities that are extinguished as the service is provided) or trade credits (financial assets and liabilities that arise as the service is provided).

**Primary income** includes compensation of employees, investment income and other primary income.

*Compensation of employees* presents remuneration in return for the labor input to the production process contributed by an individual in an employer-employee relationship with the enterprise. In international accounts compensation of employees is recorded when the employer and the employee are resident in different economies.

Compensation of employees has three main components:

- 1) wages and salaries in cash;
- 2) wages and salaries in kind;
- 3) employers' social contributions.

*Investment income* is the return for providing financial assets, including dividends, reinvested earnings and interest, that is, income from direct, portfolio, other investments and reserve assets.

Dividends are distributed earnings allocated to the owners of equity for placing funds at the disposal of the corporation.

Reinvested earnings represent the direct investor's proportion, in terms of equity held, of the earnings that foreign subsidiaries and associates do not distribute as dividends. In some cases reinvested earnings can be negative, for example, when a direct investment enterprise experiences a loss or when the dividends payable in a period exceed the net income in that period. Similar to positive reinvested earnings that are treated as a capital injection in the direct

investment enterprise by the direct investor, negative reinvested earnings are considered to be a withdrawal of funds from the capital.

Interest is a form of investment income that is receivable by the owners of certain kinds of financial assets namely deposits, debt securities, loans, and other accounts receivable and payable for putting the financial asset at the disposal of another institutional unit. Interest is recorded on an accrual basis, that is, interest is recorded as accruing continuously over time to the creditor on the amount outstanding.

Investment income attributable to policyholders in insurance, standardized guarantees, and pension funds represents returns to policyholders on their claims in insurance and standardized guarantee schemes in the form of technical reserves and income payable on pension entitlements.

Other primary income includes taxes on production and imports, subsidies and rent.

**Secondary income account** shows current transfers between residents and nonresidents. Current transfers represent compensating entries that correspond to the provision of a good, service, financial asset or another nonproduced asset when there is no corresponding return of an item of economic value. This article covers grants, humanitarian and technical aid, government contributions to various international and intergovernmental organizations, taxes and personal transfers. Current transfers are classified according to institutional sectors making or receiving transfers. The balance on the secondary income account presents total receipts less total payments.

#### **Capital account**

**Capital account** covers any international transactions with nonproduced, nonfinancial assets and capital transfers between residents and nonresidents. Nonproduced, nonfinancial assets consist of natural resources, contracts, leases, licenses and marketing assets.

Capital transfers are transfers in which the ownership of an asset (other than cash or inventories) changes from one party to another or which obliges one or both parties to acquire and dispose of an asset (other than cash or inventories) or where a liability is forgiven by the creditor.

#### **Financial account**

**The financial account** records transactions that involve financial assets and liabilities and that take place between residents and nonresidents.

The financial account indicates the functional categories, sectors, instruments and maturities used for net international financing transactions. Flows in financial assets and liabilities in international accounts are recorded on net basis. Change in external debt as a result of the revaluation of assets and liabilities in the financial account is not recorded. Entries in the financial account can be corresponding entries to goods, services, income, capital account and other financial account entries.

In the financial account the terms "net acquisition of financial assets" and "net incurrence of liabilities" are used instead of "assets" and "liabilities". If there is an increase of assets or liabilities, it is shown with a "plus" sign; if there is a decrease in assets or liabilities, it's shown with a "minus" sign. The balance on the financial account is defined as the difference between assets and liabilities.

Financial assets consist of claims of residents on nonresidents and "gold bullion" component under monetary gold.

A claim is a financial instrument that gives rise to an economic asset, which corresponds to a balancing obligation.

In the financial account assets and liabilities are classified by their functional category by the following main components: direct investment, portfolio investment, financial derivatives and stock options for employees, other investments and reserve assets.

**Direct investment** is a category of cross-border investment associated with a resident in one economy having control or a significant degree of influence on the management of an enterprise that is resident in another economy (owns equity that entitles it to 10 percent or more of the voting power in the management of the direct investment enterprise). Direct investment is classified as investment by a direct investor in its direct investment enterprise, return investment by a direct investment enterprise in its own immediate or indirect direct investor, or investment between resident and nonresident fellow enterprises.

Direct investment transactions according to the type of financial instrument are divided into equity and investment fund shares, reinvestment of earnings and debt instruments.

**Return investment** arises when a direct investment enterprise lends funds to or acquires equity in its immediate or indirect direct investor provided it does not own equity comprising 10 percent or more of the voting power in that direct investor.

*Fellow enterprises* are enterprises that are under the control or influence of the same immediate or indirect investor but neither fellow enterprise controls or influences the other fellow enterprise.

**Portfolio investments** include transactions involving debt or equity securities other than those included in direct investment or reserve assets.

**Financial derivatives and employees stock options** are financial instruments that are linked to another specific (base) instrument and through which specific financial risks (interest rate and foreign exchange risk, equity and commodity price risk, credit risk, etc.) can be traded in their own right in financial markets. Derivative financial instruments are classified into forward-type contracts and options.

**Other investment** includes other equity, currency and deposits, loans, insurance and pension programs, standardized guarantee programs, trade credit and advances, other accounts receivable and payable, SDR allocations.

Other equity is included in other investments when it is not direct investment or reserve assets. Other equity is not in the form of securities, so it is not included in portfolio investments.

**Reserve assets** are external assets that are readily available to and controlled by monetary authorities for meeting the balance of payments financing needs, for intervention in exchange markets to influence the currency exchange rate and for other related purposes (such as maintaining confidence in the currency and the economy, and serving as a basis for foreign borrowing).

The imbalance in the balance of payments account is called **net errors and omissions**. Net errors and omissions are derived residually as net lending/net borrowing and can be derived from the financial account minus the same item derived from the current and capital accounts.

The balance of payments has standard and analytic presentation. The standard presentation groups international transactions with goods, services, income and financial values consistent with the SNA and other macroeconomic statistics as a result of which the balance between transactions equals zero.

The analytic presentation is a reorganization of the standard presentation of balance of payments statistics to facilitate a basic distinction between reserves and closely related items and other transactions.

## **Methodological commentary to the international investment position**

The international investment position (IIP) is a statistical statement that shows at a point in time the value and composition of:

financial assets of residents of an economy that are claims on nonresidents and gold bullion held as reserve assets;

liabilities of residents of an economy to nonresidents.

The difference between an economy's external financial assets and liabilities is the economy's net IIP, which may be positive or negative.

IIP consists of direct investment, portfolio investment, financial derivatives and employees stock options, other investment, and reserve assets.

The values in the IIP at the end of the period result from transactions and other flows in the current and previous periods. The integrated IIP statement consists of the IIP, the financial account and the other changes in financial assets and liabilities.

Other flows are changes in the volume, value, or classification of an asset or liability that do not result from a transaction between a resident and a nonresident. Other flows cover various kinds of changes in assets and liabilities

that are recognized analytically under two broad types:

- 1) other changes in the volume of assets and liabilities reflect entrances of new assets into balance sheets and exits of existing assets and liabilities from balance sheets that are not caused by interactions by mutual agreement between institutional units (i.e. transactions)
- 2) revaluations (holding gains and losses) on an asset or liability arise from changes in their prices and/or the exchange rates.

IIP is compiled on the basis of BPM6. Methodological approaches to the compilation of the IIP and BOP completely coincide.

### **IIP and BOP compilation practices**

Statistical reports on transactions with financial assets and liabilities serve as source data for the compilation of international accounts (BOP, IIP, external debt). Reports submitted by respondents are checked and revised according to the National Bank's results of registration and notification of foreign exchange transactions involving the movement of capital, as well as information from banks and professional participants of the securities market.

## Appendix IV.3

### Calculating principles of analytical indexes and the balance of payments estimating items

#### 1. Methodological principles for assessing the volume of "shuttle" trade

A significant part of Kazakhstan's foreign trade turnover consists of the "shuttle trade" - unorganized, i.e. not getting to official customs statistics, foreign trade transactions of individuals. The National Bank of Kazakhstan estimates such transactions to include them in the articles of the trade balance as an adjustment on coverage.

The total estimate of the goods imported/exported by individuals with the purpose of subsequent resale is calculated as the product of the number of "shuttle traders" and the average cost of their imported and exported goods.

One of the main sources for determination the proportion of individuals who are engaged in "shuttle" business and the list of countries with which the "shuttle" trade is most active were the results of the border survey of passengers conducted in October, 2000 together with customs authorities at major border auto transitions, railway checkpoints, and international airports. The survey allowed establishing the proportion of the exiting and the entering by region and trip purposes as well as the average amount of personal expenses for travel and the amount spent by "shuttle traders" for commercial purposes. In addition, to determine the average value of goods per one "shuttle trader", data from the Customs Committee on the goods transported by individuals and declared under the simplified procedure were used.

##### *Shuttle imports calculations from the non-CIS countries:*

Baseline information is the data of the Border Service of the National Security Committee of the Republic of Kazakhstan on the number of individuals crossing the border of the country. According to the survey results, the Kazakh "shuttle" raids are carried out mainly in China and Turkey.

Across the non-CIS countries the average value of goods purchased by "shuttle traders" is estimated to be \$5000 since the goods imported

by individuals in excess of that amount are subject to declaration and recognized in customs statistics. The share of "shuttle traders" is set on average at 60% of those leaving the Republic of Kazakhstan for the purpose of tourism and private trips to China and Turkey and 20% - for the non-CIS countries. Contiguity of borders suggests more intensive trade, so calculations on China also include the nonresidents who exit the country to enter Kazakhstan with a private purpose and as a tourist.

##### *Shuttle imports calculations from the CIS countries:*

Based on the results of the survey, average expenditure on goods imported by a "shuttle trader" from the Russian Federation, Kyrgyzstan and Uzbekistan is determined, which is then multiplied by the estimated number of "shuttle traders". The average expenditure on goods imported by "shuttle traders" from the Russian Federation was set at \$1500, from Kyrgyzstan and Uzbekistan - \$500. The number of shuttle traders is defined as the proportion of the number crossing the border with a private purpose (according to the Russian Federal Border Service and PS RK NSC): 25% of those crossing the border from the Russian Federation, 20% from Kyrgyzstan and 30% from Uzbekistan. At the same time only the exiting residents are taken into account for Russia, whereas for Kyrgyzstan and Uzbekistan – the exiting residents and also nonresidents exiting these republics.

##### *Shuttle exports calculations to the CIS countries:*

Given that goods for resale by individuals are not exported to other countries, the calculations of shuttle exports are made only for the CIS countries.

The survey allowed obtaining quantitative ratios for determining the shuttle traders exporting goods to the CIS countries - 15% from the number of residents traveling to the Russian Federation for private purposes and 30% - from the number of residents traveling to Uzbekistan, as well as

nonresidents exiting these countries. Average expenditure was determined from the results of the survey and amounted to \$500 for export to Russia and \$350 to Uzbekistan.

## **2. Methodological principles for estimating the value of imports in FOB prices and the calculation of transport costs during exports and imports of goods**

Data generated on the basis of customs freight declarations of official statistics on the import of goods reflect the value of the goods at the customs border of Kazakhstan. That is, during an import of goods from countries that do not have a common border with Kazakhstan, the customs value of imported good in addition to the value of the good at the customs border of the importer (FOB-type valuation) includes the cost of insurance and freight transportation to the border of Kazakhstan (CIF-type valuation).

In the balance of payments the values of exports and imports of goods are recorded in the FOB-type prices (loading goods at the expense of the buyer) at the customs border of the seller of the goods, while the costs of insurance and freight transportation are reflected in the relevant articles of the balance of international services. Therefore, in order to accurately reflect the data in the balance of payments, a correction to the classification is introduced in the customs statistics data on import of goods - the costs of insurance and transportation, which are already included in the import of international services in the "insurance services" and "freight transportation" articles, are deducted from the CIF-type value of imports.

The sources for determining the share of the cost on insurance and freight transportation in the cost of imported goods are specialized surveys of exporters and importers which are held by the National Bank on an annual basis. On the basis of the survey results for 2002-2004. ("Questionnaire survey of enterprises on the costs of transportation and insurance during exports and imports of goods" as a form of statistical report was introduced in 2002) average estimated coefficients for recalculation of imports of goods from CIF prices to FOB prices and calculation of freight

services by mode of transport were obtained. The coefficients were estimated across border countries and other countries.

In order to obtain comparable analytically significant amount of data on trade in goods and services, as well as to ensure the formation of the balance of services by expanded classification (introduced by the International Monetary Fund in 2000), new estimated coefficients derived in 2004 were applied to the balance of payments data starting with 2000.

According to the results of specialized surveys subsequent revisions of estimated coefficients will be made if the survey data differs significantly from the average of the coefficients (for example, when new methods and routes of freight transportation appear). During revisions of the coefficients the principle of averaging data for periods that are characterized by the changes will be retained.

## **3. Methodological principles for estimating exports and imports of international services under the "Travel"**

In accordance with the methodology of the balance of payments, the article "Travel" covers primarily the goods and services that are acquired in this country by visitors (non-residents in Kazakhstan, residents abroad) if their term of stay does not exceed one year. The amount recorded in the balance of payments under this article represents estimation of cost of expenses of visitors on acquisition of goods and services in the country of residence. In this group doesn't include the transportation of passengers in international traffic (ticket price) which are accounted for in the article "Services: Passenger".

Exports/imports of services under the "Travel" are calculated as the product of the average expenditure on a single trip and the number of the exiting/the entering.

The average expenditure per travel is defined by survey of individuals crossing the border of Kazakhstan by country of destination/arrival and trip purposes (work, tourism, private). The Border Service of Kazakhstan National Security Committee and the Federal Border Service of the Russian Federation data

provide the initial information on the number of the exiting/the entering by citizenship, purpose of travel and countries.

These guidelines for the calculation of the article "Travel" are applied from the 1st quarter of 2001.

#### **4. Methodological principles for estimating "Workers` remittances"**

In according to methodology of the balance of payments "Workers` remittances" consider the transfers of the labor migrants staying outside their own country over a year, i.e. being residents of the host country.

"Workers` remittances" article of the balance of payments of Kazakhstan is formed according to the banking statistics data on international money transfers of individuals by their residency, sender/recipient country and purposes of transfer. At the same time bank statements do not contain information about the origin of these funds and the senders' citizenship. Taking into account the flow of funds as payments for purchased goods and services (considering country distribution of workers` remittances) in the reporting data on non-repayable money transfers, estimates of the share of non-repayable workers` remittances of individuals in the total amount of personal transfers that are classified by senders as non-repayable are conducted. Thus, under this article the cross-border non-repayable transfers of individuals according to bank statistics data taking into account the estimates of the National Bank.

Methodological approaches to this estimation were developed from the results of December, 2010 with participation of the Kazakhstan banks of anonymous inspection of physical persons senders of money transfers.

Based on results of the survey averaged coefficients to estimate the share of non-repayable transfers were obtained, where the coefficients were estimated by countries, by direction (from Kazakhstan/to Kazakhstan) and by methods (using a bank account and through international money transfer systems).

These coefficients are used to estimate the Workers` remittances, starting with the 1st quarter of 2009. At the same time transactions carried out

through international money transfer systems are taken into account in this article.

#### **5. Principles for calculating net inflows/outflows of capital by the private sector**

Net inflows/outflows of capital include all transactions by the private sector registered in the financial account of the balance of payments, as well as errors and omissions.

The private sector includes all residents except for the Government of the Republic of Kazakhstan and the National Bank of Kazakhstan ("General government" and "Central bank" sectors in the balance of payments).

For the purposes of this table, net acquisition of assets recorded in the financial account of the balance of payments is shown with the opposite sign: an increase in assets is presented with a "minus" sign, whereas a decrease - with a "plus" sign. Accordingly, aggregates (Net inflows/outflows of capital, Banks, Other sectors, Transactions of the Government sector, Financial account (excluding reserve assets)) are also presented with the opposite sign to that used in the balance of payments. Thus, outflow of capital includes transactions related to an increase in external assets or a decrease in external liabilities in this table. Inflow of capital is provided by an increase in external liabilities or a decrease in external assets.

External assets include investments of residents in foreign stocks or debt securities, loans and credits granted by residents to nonresidents, receivables of residents from nonresidents, foreign currency belonging to residents, residents' accounts abroad and other assets.

External liabilities include investments of nonresidents in domestic stocks or debt securities, loans and credits granted by nonresidents to residents, payables of residents to nonresidents, nonresidents' accounts in domestic banks and other liabilities.

Assuming that the errors and omissions in the balance of payments are mainly formed by the non-bank private sector transactions, this item is included in the calculation of net inflows/outflows of capital from other sectors.

## 6. Principles of calculating the real effective exchange rate index

The real effective exchange rate index (REER) is a weighted average change of tenge exchange rate against the currency basket of main trade partners of Kazakhstan corrected for changes in prices.

An increase\decrease in the index shows tenge appreciation\depreciation against the basket of currencies of countries with which Kazakhstan engages in trade transactions, so with other things being equal, means that domestic producers have more\less competitive advantages in the domestic and in the external markets.

### ***Algorithm for calculating the index of the real effective exchange rate (REER)***

#### Initial parameters:

1. Weights of Kazakhstan trade partners in total trade turnover. Countries that belong to the currency basket account for about 90% of the total registered trade turnover.
2. Nominal exchange rates of the countries - trade partners in relation to dollar.
3. Changes in CPI of countries - trade partners.
4. Exchange rate of KZT/USD.
5. Changes in Kazakhstan's CPI.
6. Selection of the basic period in relation to which the index is calculated.

#### Data transformation

- Normalization of trade partner weights, calculation of country share  $w_i$  in the total commodity trade turnover:

The current year weights are calculated by means of averaging given country weight in group total commodity trade turnover for three preceding years.

$$w_{ji} = \frac{t_{j(i-1)} + t_{j(i-2)} + t_{j(i-3)}}{T_{i-1} + T_{i-2} + T_{i-3}}$$

where

$w_{ji}$  - country weight in the total commodity trade turnover for the group for the current year

$T_{i-1\dots i-3}$  - commodity turnover for the group of countries for three preceding years

$t_{j(i-1)}\dots t_{j(i-3)}$  - country commodity turnover for

three preceding years

Thus to calculate REER index for 1999 we use the weights computed based on trade statistics data for 1996-1998; for 2000 – 1997-1999 and so on. For 1995-1997 since there is no data for the three preceding periods average weights for 1995-1997 are used.

- Transformation of CPI to the base period
- Calculation of tenge cross exchange rate in terms of trade partner currency units -  $S_i^T$  for every reporting period:

Tenge cross exchange rate = Foreign currency exchange rate to US dollar / Tenge exchange rate to US dollar

#### Calculation of the real effective exchange rate index (REER)

- I. Calculation of tenge exchange rate change for a reporting period relatively to the base period:

$$\Delta S_i = S_i^T / S_i^0,$$

where

$\Delta S_i$  - tenge exchange rate change for the reporting period denominated in foreign currency units (reverse quotation);

$S_i^T$  - tenge exchange rate for the reporting period;

$S_i^0$  - tenge exchange rate for the base period.

- II. Calculation of the nominal effective exchange rate index (NEER)

$$NEER = 100 * \prod_i (\Delta S_i)^{w_i}$$

where

$w_i$  - weight of country  $i$  in the total commodity trade turnover;

$\prod_i$  - multiplication of tenge exchange rate against trade partner countries currencies change indices taking into account normalized weight of a country in the total country group commodity trade turnover.

- III. Calculation of the real effective exchange rate index (REER)

$$REER = 100 * \prod_i (\Delta S_i * (P_i^d / P_i^f))^w$$

where

- $P_i^f$  - price level in  $i$  country – trade partner of Kazakhstan;
- $P^d$  - price level in Kazakhstan;
- $\Pi_i$  - multiplication of tenge exchange rate against trade partner countries' currencies change indices, corrected for relative prices taking into account normalized weight of a country in the total country group commodity trade turnover.

The use of three-year period for calculation of trade partner country weights in the county's trade turnover is the most optimal option. This approach allows smoothing influence of different short-term factors on commodity trade flows. At the same time the risk of using old structure of commodity trade in the weighting scheme is negligible. Changes in the geographical

distribution of commodity trade flows are actualized as soon as new data for a given period is received. The National Bank of Kazakhstan updates trade weights annually.

For analytical purposes, The National Bank of Kazakhstan also calculates real effective exchange rate index on the basis of weights excluding external trade transactions with oil and gas condensate. As the influence of exchange rate fluctuations on the competitive advantage of the exporters and importers of these commodities is negligible (in this case the most important factor is the change in world prices for fuel commodities), this index can provide the most adequate estimation of exchange rate fluctuations' influence on the volumes and structure of external trade.

### On transition to the new methodology of external sector statistics

Until 2013 the compilation of the external sector statistics of Kazakhstan was conducted in accordance with the International Monetary Fund (IMF), the Balance of Payments Manual, 1993, 5<sup>th</sup> edition (BPM5). Starting with the reports from the 1<sup>st</sup> quarter of 2013, the National Bank has made a transition to the new IMF methodology of the external sector statistics – the Balance of Payments Manual, 2009, 6<sup>th</sup> edition (BPM6) in order to comply with new international standards.

Conceptually, the BPM6 maintains continuity with the methodology of the previous edition (BPM5). Previous data on balance of payments statistics, based on the BPM5 recommendations, generally remain comparable with the aggregate data compiled according to the new methodology. Data conversion of the balance of payments, international investment position and external debt of Kazakhstan for the period 2005 to 2012 (incl.) has been implemented to achieve comparability of time series. The values of the balance of payments, international investment position and external debt accounts and their components for these periods changed since there was a rearrangement of individual items in the balance of payments.

The standard presentation of the balance of payments statistics, previously based on the use of credit (plus) and debit (negative) entries, has been modified for publication of data. The current account and capital account exclude the use of the "minus" sign while reflecting imports of goods and services as well as primary and secondary incomes payable. At the same time, the balance of relevant accounts (goods, services, primary income and secondary income) is defined as the difference between the credit and the debit.

In financial account, the terms "assets" and "liabilities" have been changed to "net acquisition of financial assets" and "net incurrence of liabilities". If there is an increase of assets or liabilities, it is shown with a "plus" sign; if there is a decrease in assets or liabilities, it's shown with a "minus" sign. The balancing item for the financial account is defined as the difference between assets and liabilities.

A brief summary of the changes in the BPM6 requirements compared with the BPM5 is given in the Appendix.

A detailed Methodology on international accounts (external sector statistics) developed on the basis of the BPM6 is available on the website of the National Bank of the Republic of Kazakhstan.

Because of the absence of direct investment data according to the directional principle (to Kazakhstan and abroad) in the standard presentation of the balance of payments and international investment position, additional analytical tables are provided:

- Direct investments on a directional basis: flows for the period – contains indicators of the net and gross inflows and outflows of the direct investments to and from Kazakhstan.
- Direct investments on a directional basis: position as of the end of the period.

Due to the changes in the presentation of the direct investments and the inclusion of transactions between fellow enterprises in its composition, the description of the indicators and the compilation methods for gross inflows and outflows of the direct investments have been clarified – direct investor's share capital buyback is excluded.

For the comparability of data, recalculation of time series on gross direct investment inflows to Kazakhstan from foreign direct investors and gross direct investment outflows from Kazakhstani direct investors abroad starting from the year 2005 has been completed.

Furthermore, the balance of payments and international investment position transactions and positions associated with foreign assets of the National Fund of the Republic of Kazakhstan have been moved to the "General government".

For compliance with the requirements of the BPM6, the structure of standard presentation of external debt of the country has been slightly changed, particularly:

- "Other sectors" does not include intercompany lending, which is currently presented as an independent component in the external debt

composition. As in the balance of payments and international investment position, the intercompany lending includes liabilities to foreign fellow enterprises.

- Beginning with the 1<sup>st</sup> quarter of 2013, "Other liabilities" include instruments such as "Insurance and pension programs, standardized guarantees".
