Kazakhstan:
Balance of Payments and
External Debt

for the first quarter of 2014

July, 2014

This publication was prepared by the Balance of Payments, Currency Regulation and Statistics Department. It reflects the latest developments in the external sector of the Republic of Kazakhstan and provides statistical reports on the balance of payments, international investment position and external debt of the country, as well as analytical commentaries to these reports. Statistical reports are supplemented by detailed analytical tables describing the methodology of external sector statistics and data sources for compilation. A separate statistical annex presents the structure of stocks and flows of international investment by type of investment. It is published on quarterly basis (in January, April, July and October).

Adjustments to previously published historical data series are possible in case of the changes in accounting methodology of statistical data and (or) availability of additional information about foreign trade transactions. In accordance with the regulations, statistics of the external sector of the Republic of Kazakhstan is revised twice a year - during the compilation of reports on the balance of payments, international investment position and external debt for the half year and for the full year and covers the two years prior to the reporting year. Updated data are published annually in April and October.

The main source for clarification of data is the emergence of additional information received at the time of compiling the reports – the data obtained in the framework of registration and notification of foreign currency transactions, the identification of statistical discrepancies in reconciliation of data with others, except for statistical reporting on the balance of payments, data sources, as well as clarification of official trade statistics.

Due to rounding of data in separate cases in the tables provided in this publication, there may be minor differences in the last digit between totals and sum.

The date of compilation of statistical data for this publication is June 30, 2014. The date of the last update of data for the period 2011-2013 is 31 March, 2014.

Additional information about the presentation of statistical data can be obtained from the Balance of Payments, Currency Regulation and Statistics Department.

at the following address: 050040, Almaty, Koktem-3 microdistrict, 21
by email: altynay.kangeldiyeva@nationalbank.kz

Statistical reports on the balance of payments, international investment position and gross external debt in standard and analytic representations, as well as a methodological commentary on the compilation of these reports are available on the website of the National Bank of Kazakhstan: <http://www.nationalbank.kz/>. The specified statistical reports are published on the NBK's website on the 90th day after the end of the reporting period and are available in Kazakh, Russian and English languages.

BALANCE OF PAYMENTS OF THE REPUBLIC OF KAZAKHSTAN for the first quarter of 2014

From the first quarter of 2013, Kazakhstan's balance of payments is compiled in accordance with the sixth edition of "Balance of Payments and International Investment Position Manual" (BPM6). The main methodological changes are provided in the press release of the National Bank No.25, which is available on the following webpage: <http://www.nationalbank.kz/?docid=199&switch=english>. Full implementation of BPM6 based on updated data sources is planned for 2014-2015.

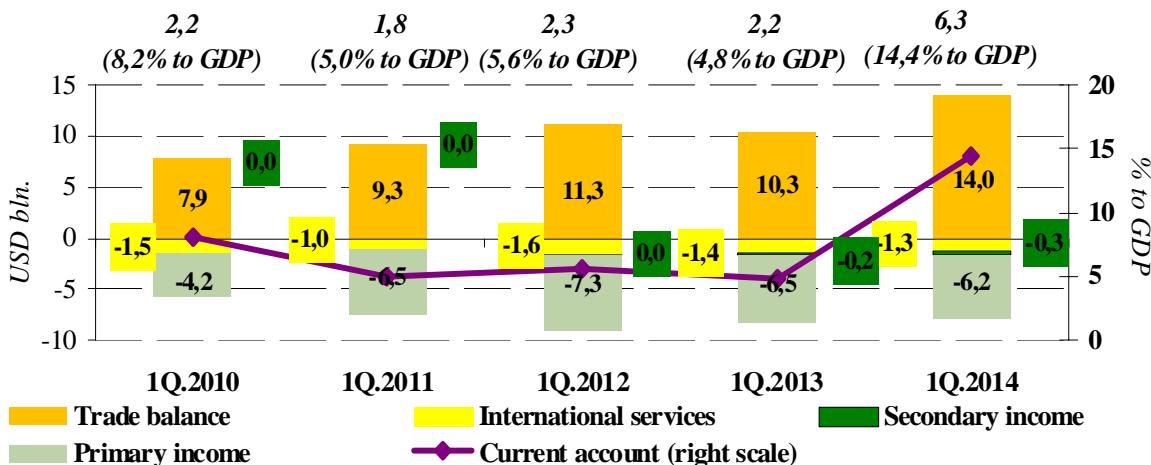

The Balance of Payments is a statistical statement that summarizes economic transactions of an economy with the rest of the world for a specific period. The Balance of payments data represent economic category of flows that describe international economic relations with all types of real and financial resources in time series format.

Current account

Persistent high energy prices during the first quarter of 2014 along with the implemented adjustment to the domestic currency in February have contributed to an increase of the current account surplus.

With the growth of exports of goods by 10.8% and the reduction of imports of goods by 14.6%, the positive trade balance for the considered period increased by 36.0% as compared to the same period of last year, exceeding 14 billion dollars in total.¹

Figure 1. Current account

The results of trading transactions in combination with a decline, relative to the base period², of negative imbalances of international services (by 8.9%) and primary income (by 4.9%) led to the achievement of a record level of the current account surplus, reaching 6.3 billion dollars or 14.4% of the country's GDP for January-March 2014 period (2.2 billion dollars or 4.8% of GDP for the first quarter of 2013).

¹ Here and hereinafter - US dollars

² Here and hereinafter the first quarter of 2014 is considered as a reporting period, and the first quarter of 2013 - as a base period

Taking into consideration reported data for the first quarter and emerging dynamics of the world prices for hydrocarbons from the beginning of the year, the current account surplus is expected to be maintained until the end of 2014. The average monthly quoted oil price for January-June of the current year was 108.8 dollars per barrel, reaching 111.6 dollars per barrel in June.

External trade and trade balance

External trade turnover according to the balance of payments classification (including revisions of the official statistical data) for the first quarter of 2014 was 31.4 billion dollars, an increase of almost 0.7 billion dollars (by 2.4%) in comparison with the same indicator of last year. Exports of goods amounted to 22.7 billion dollars, while imports - 8.7 billion dollars (20.5 billion dollars and 10.1 billion dollars, respectively, in the base period).

Exports of goods registered by authorized bodies reached more than 22.6 billion dollars in the reporting quarter, which is 11.2% higher than the official exports in the base period.

In the analyzed period, the share of mineral products in total exports of goods rose by 4.7% to 85%, as a result of which the coefficient of commodity concentration of exports reached 85.3% against 81% at the first quarter of 2013. Despite the decline of 2.6%, products of nonferrous metallurgy took the second place in the total volume of exports with a share of 4.4%. With the reduction of the share in the value of exports by 0.8%, ferrous metals ranked third with a share of 3.2%. The share of grain products increased slightly (by 0.1%) to 1.6% (Table 1).

Table 1

**Commodity structure of exports of the Republic of Kazakhstan
(according to official statistics)**

| Commodity group | Q1 2013 | Q1 2014 |
|--------------------------------------|-----------------|-----------------|
| <i>Value (in mln. of US dollars)</i> | | |
| All commodities | 20 343.0 | 22 615.1 |
| Main nomenclature, including | 19 572.5 | 21 933.5 |
| Mineral commodities | 16 325.8 | 19 213.6 |
| <i>including oil and natural gas</i> | 13 822.5 | 16 690.1 |
| Ferrous metals | 812.5 | 733.0 |
| Nonferrous metals | 1 419.2 | 998.2 |
| Grain | 311.6 | 350.7 |
| Other commodities | 770.6 | 681.6 |
| <i>Ratio (in %)</i> | | |
| All commodities | 100 | 100 |
| Main nomenclature, including | 96.2 | 97.0 |
| Mineral commodities | 80.3 | 85.0 |
| <i>including oil and natural gas</i> | 67.9 | 73.8 |
| Ferrous metals | 4.0 | 3.2 |
| Nonferrous metals | 7.0 | 4.4 |
| Grain | 1.5 | 1.6 |
| Other commodities | 3.8 | 3.0 |

At the first quarter of 2014, the world price for Brent oil averaged 107.9 dollars per barrel, which is 4.4% less than its average level in the base period (112.9 dollars per barrel). The average contract price for Kazakhstan's oil exports decreased to 820.3 dollars per ton as compared to the 829.1

dollars per ton in the base period. Physical deliveries of the main export products grew to 3.6 million tons; the volume of oil shipped overseas at the first quarter was 20 million tons and amounted to 16.4 billion dollars.

The analysis of influence of price and quantity factors on the value of official exports indicates that the growth of total exports relative to the base period occurred as a result of the increase of physical volumes by 15% during the decrease of average contract prices by 4% (Table 2).

Table 2

**Influence of the price factor and physical volume changes on the value of exports
(Q1 2014 compared with Q1 2013, according to official statistics)**

| Commodity group | Export, millions of US dollars | | Change (increase (+), decrease (-)) | Including, as a result of changes in | |
|------------------------------------|-----------------------------------|-----------------|---|---|------------|
| | Q1 2014 | Q1 2014 | | price | volume |
| All commodities | 22 615.1 | 20 343.0 | 11% | -4% | 15% |
| Main nomenclature | 21 933.5 | 19 572.5 | 12% | -3% | 16% |
| Mineral commodities | 19 213.6 | 16 325.8 | 18% | -2% | 19% |
| <i>of them oil and natural gas</i> | 16 690.1 | 13 822.5 | 21% | -1% | 22% |
| Ferrous metals | 733.0 | 812.5 | -10% | -2% | -8% |
| Nonferrous metals | 998.2 | 1 419.2 | -30% | -16% | -17% |
| Grain | 350.7 | 311.6 | 13% | -25% | 49% |
| Other commodities | 681.6 | 770.6 | -12% | -10% | -1% |

The largest decrease in the price component was recorded in grain. In the reporting quarter, the world price for wheat was 297.1 dollars per ton, decreasing by 7.5% as compared to the base period. The average contract prices for wheat decreased in a substantial manner by 22.8% to 232.2 dollars per ton. However, considerable increases in the quantitative supplies of cereals (by 49%) fully compensated for the fall in export prices, leading to an increase of the export value of this product by 13%.

In geographical structure of Kazakhstan's exports, the European countries accounted for 63.7% of the officially recorded exports, the Asian region - 23.4% and the CIS countries - 10.3%. In export distribution by country, among main consumers of domestic products the first place is still occupied by Italy (22.9%), the second place - by China (15.6%), followed by the Netherlands (11.3%), France (7.8%) and the Russian Federation (5.5%).

According to the official statistics, *imports of goods* for the reporting period totaled 8.4 billion dollars, which is 12.4% lower than that in the base period.

The significant reduction in the value of imports was mainly due to a decline in intermediate imports, the total imports of which decreased in comparison with the base period by 29.6% (over 1 billion dollars). In the reporting quarter, the intermediate imports were 2.6 billion dollars with a share of 30.6% in total imports. The greatest decrease by 717.5 million dollars to 52.7 million dollars in the value of intermediate imports was recorded in oil and gas condensate. The imports of investment goods decreased by 8.2%, while food products - by 6.5% (Table 3).

Table 3

**Commodity composition of imports of the Republic of Kazakhstan
(imports in CIF prices according to official statistics)**

| Commodity group | Q1 2013 | Q1 2014 |
|---|----------------|----------------|
| <i>Value (in mln. dollars)</i> | | |
| All commodities | 9 649,5 | 8 457,3 |
| Consumer goods | 2 474,1 | 2 560,9 |
| Food products | 820,0 | 766,7 |
| Nonfood goods | 1 654,0 | 1 794,1 |
| Interim consumption of industrial goods | 3 675,0 | 2 586,6 |
| Investments goods | 3 286,8 | 3 018,9 |
| Other goods | 213,6 | 290,9 |
| <i>Ratio (in %)</i> | | |
| All commodities | 100 | 100 |
| Consumer goods | 25,6 | 30,3 |
| Food products | 8,5 | 9,1 |
| Nonfood goods | 17,1 | 21,2 |
| Interim consumption of industrial goods | 38,1 | 30,6 |
| Investments goods | 34,1 | 35,7 |
| Other goods | 2,2 | 3,4 |

In geographical structure of imports, the CIS countries preserved leadership - 41.4% of total imports, while European and Asian countries accounted for 22.3% and 29%, respectively. Across individual countries, the Russian Federation remained at the leading position with a reduced share from 37.4% to 33.8% in total imports, the second place was maintained by China (16.9%), followed by Germany (5.7%), and the United States (4.8%).

In comparison with the base period, the average index of trade terms, which is calculated as the ratio of the change in export prices to the change in import prices, was below 6% in the reporting period. Moreover, an aggregate price index of Kazakhstan's exports was below 5%, while the import price index increased by 2% compared to the base period (Table 4).

Table 4

**Changes in the price indices and trade terms
(in percentage as compared to the same period last year)**

| | Q1 2013 | Q2 2013 | Q3 2013 | Q4 2013 | 2013 | Q1 2014 |

| Terms of trade | -17 | -20 | -13 | -6 | -14 | -23 |
| <i>Russia</i> | | | | | | |
| Export prices | -5 | -10 | -11 | -10 | -9 | -13 |
| Import prices | -4 | -5 | -3 | -6 | -5 | -3 |
| Terms of trade | -1 | -5 | -8 | -4 | -5 | -11 |

The trade turnover with the countries of the European Monetary Union, which are the main consumers of the Kazakhstan's raw materials, increased by 21.7% relative to the base period. Exports in

this direction rose by 23.5%, whereas imports - by 7.9%; as a result, the trade surplus with the countries of EMU increased compared to the base period by 25.9%, and was valued at 10.5 billion dollars.

With the reduction of export flows to the Russian Federation by 25.6% and the decrease of imports by 20.7%, the trade turnover with Russia amounted to 4 billion dollars, which is 22.3% less than that in the base period. The negative imbalance of trade transactions equaled 1.6 billion dollars, a decrease of 16.6%.

Adjustments on coverage. The turnover of transactions by individuals unregistered in official statistics (the so-called "shuttle trade") in the reporting period was estimated to be over 0.7 billion dollars. With the exports of 100.9 million dollars and the imports of 678.7 million dollars, the negative balance of these transactions decreased to 577.8 million dollars as compared to 763.6 million dollars in the base period.

In the reporting period, an adjustment was made to official imports: according to the data from Customs Control Committee on the import of cars by individuals for personal use with registration of Customs Payment Order (CPO) by 11.2 million dollars, according to the data from partner countries on the natural gas supply by 78 million dollars.

Due to the reflection of goods that are not subject to recording in the official imports according to the methodological standards of international trade statistics, the downward adjustment to official imports was made in the amount of 124.2 million dollars.

As a result of adjustments on coverage, on classification (adjustment from CIF import prices to FOB prices) and on the cost of goods purchased by transport organizations in ports, the trade surplus for the reporting quarter amounted to 14 billion dollars as compared to 10.3 billion dollars in the base period.

The balance of international services

The deficit in international services for the reporting period was 1.3 billion dollars, which is 125 million dollars less than that in the base period. Despite a slight increase in imports of services (by 1.4%), the reduction of negative imbalance of services was fully ensured by the increase in exports of services (by 14.0%).

The exports of services for the reporting quarter amounted to 1.3 billion dollars, where the increase by 161 million dollars was mainly the result of the growth of earnings by 132 million dollars from rendered transport services to nonresidents (Table 5).

In the structure of the main item of exports of "Transport" services, freight services increased by 25.0% mainly as a result of the increase in revenues for pipeline gas transit through the territory of the country (by 77.4%). Amid the decline of imports of goods, the cost of services of nonresidents for transportation of goods imported into the country decreased by 8.3% resulting in an increase of positive freight transport balance by more than 3 times to 238.0 million dollars.

Table 5

Components of the international services balance
(Q1 2014 compared with Q1 2013)

| | Export | | Change (increase (+), decrease (-)) | Import | | Change (increase (+), decrease (-)) |
|--|-----------------|-----------------|---|-----------------|-----------------|---|
| | Q1 2013 | Q1 2014 | | Q1 2013 | Q1 2014 | |
| TOTAL | 1 144.80 | 1 305.30 | 14.0% | 2 544.43 | 2 580.17 | 1.4% |

| Other business services | 117.57 | 134.84 | 15% | 866.91 | 1177.38 | 36% |
| Personal, cultural, and recreational services | 0.34 | 0.37 | 7% | 17.07 | 17.46 | 2% |
| Government services | 47.72 | 49.86 | 4% | 32.13 | 54.92 | 71% |

Imports of services for the period under review were about 2.6 billion dollars, resulting in a decrease of its share in the foreign trade turnover of services of Kazakhstan from 69.0% in the base period to 66.4%.

A significant reduction of expenses (by 23% or by 90 million dollars) of Kazakhstan's citizens in foreign trips and commission expenses of Kazakhstan's banks on transactions with nonresidents (by 9 times or by 143 million dollars) mostly offset the significant increase in *other business services* prevailing in cumulative imports of services of 36% or by 310 million dollars. In the structure of this article, the greatest absolute increase in imports by 175 and 178 million dollars was observed in engineering and consulting services, respectively.

In geographical structure of international trade in services of Kazakhstan, the foreign trade turnover of services of the Member States of the Customs Union based on the results of the reporting period amounted to 23.9 %, the share of the European countries accounted for 24.0%, Asia – 17.6 %.

The main consumers of Kazakhstan's services are the Russian Federation - 33.1% of total exports, China (7.6%) and Uzbekistan (7.2%).

In the country-specific structure of import of services, the leading position is also occupied by the Russian Federation – 18.4 % of the total imports, followed by the USA (11.0 %), Great Britain (8.3 %), the Netherlands (5.5 %) and China (5.1 %).

Balance of primary income

In the reporting period, the deficit in the primary income balance was 6.2 billion dollars, which decreased relative to the base period by 4.9% mainly due to the reduction of income paid to nonresidents from direct investments from 5.9 billion dollars in the base period to 5.6 billion dollars in the reporting period (by 5.4%). Overall, the income receivable from rendering services of labor and capital to nonresidents decreased by 0.9% to 0.5 billion dollars, while the income payable to nonresidents decreased by 4.6% to 6.7 billion dollars (7.1 billion dollars in the base period).

Compensation of employees. The negative imbalance of compensation of employees in the reporting period reached 437.6 million dollars, which is 3.6% higher than the same indicator in the base period. The compensation of residents working abroad and citizens of Kazakhstan employed in foreign embassies and representative offices of international organizations on the territory of the country is estimated at 1.0 million dollars. The income of foreign citizens working in Kazakhstan grew by 3.6%, where the compensation of nonresidents hired by Kazakhstan's enterprises increased by 13.0% to 198.0 million dollars. The salary estimate of informally employed labor immigrants from the CIS countries was 240.6 million dollars.

Investment income. The deficit of the investment income amounted to 5.8 billion dollars, decreasing by 5.4% as compared to the base period (Table 6).

Table 6

| Balance of investment income | -6119.6 | -6855.1 | -6116.9 | -5785.4 |

The income of the *National Bank of the Republic of Kazakhstan* from the international reserves in the reporting period amounted to 42.5 million dollars. Income (net) of the *Government of the Republic of Kazakhstan* in the amount of 270.8 million dollars from the funds of the National Fund of the Republic of Kazakhstan invested in foreign assets (280.8 million dollars) increased by 38.8% relative to the base period (Table 7).

| Income receivable | 270.3 | 79.1 | 75.7 | 94.9 |
| Income payable | 260.1 | 310.1 | 264.9 | 260.5 |
| <i>Other sectors</i> | -6345.2 | -6832.1 | -6205.7 | -5933.5 |
| income receivable on direct investment transactions | 11.1 | 21.6 | 66.1 | 19.3 |
| income payable on direct investment transactions | 6023.0 | 6492.3 | 5832.9 | 5477.3 |
| other income receivable | 59.4 | 69.1 | 82.7 | 75.0 |
| other income payable | 392.6 | 430.4 | 521.7 | 550.5 |

Income payable in the *banking sector* amounted to 260.5 million dollars (264.9 million dollars in the base period). The payments of interest on financial investments attracted by banks declined by 21.2% to 153.9 million dollars, where 105.2 million dollars accrued on debt securities issued by Kazakhstan's banks and 39.2 million dollars were spent on servicing of borrowings and loans.

Income receivable from foreign assets in the banking sector grew by 25.4% to 94.9 million dollars of which 58.0 million dollars accrued on loans granted to nonresidents.

On transactions of *other sectors* the negative imbalance was 5.9 billion dollars, which is 4.4% less than that in the base period. Net income of nonresident creditors who are not in direct investment relationship increased by 8.3% to 475.5 million dollars, while net income of nonresidents on transactions of direct investment decreased by 5.4% to 5.5 billion dollars.

Secondary income

The deficit in the secondary income balance in the first quarter of 2014 was 318.4 million dollars against 243.3 million dollars in the base period. The growth of a negative imbalance by 30.9%, first of all, was associated with the reduction of income transfer received by the general government.

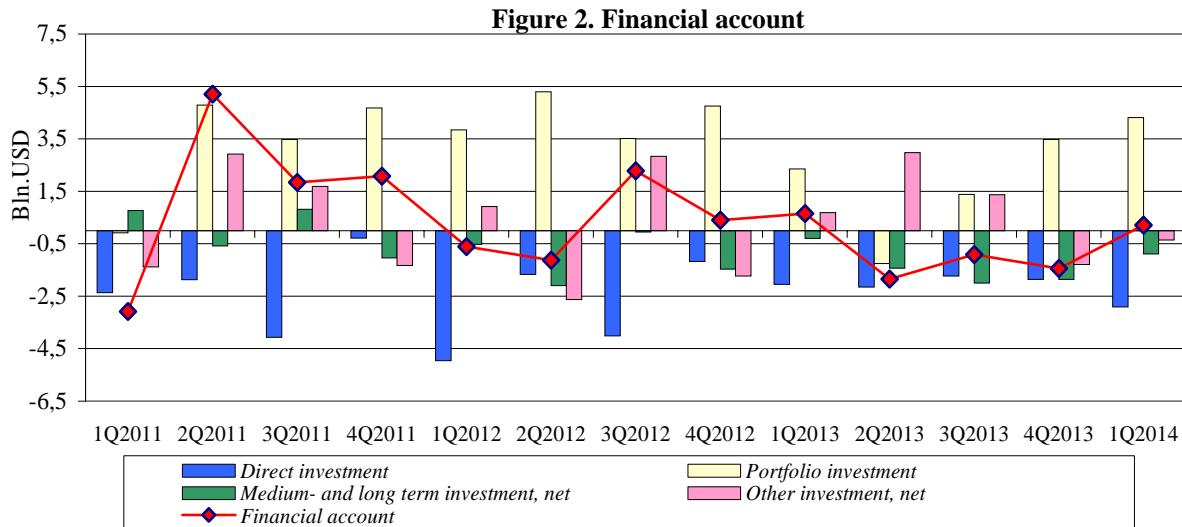

Customs duties sent by Kazakhstan in favor of other countries of the Customs Union decreased by 54.7 million dollars (by 13.7 %) to 343.5 million dollars; however, the amount received by the state budget from union countries decreased significantly – by 72.9 million dollars (by 18.5%) to 320.5 million dollars. As a result, the sent customs payments exceeded the amount received by 23.1 million dollars. Overall, the positive balance of secondary income in the general government sector reduced from 171.9 million dollars in the base period to 112.6 million dollars in the reporting period.

The negative imbalance of transfer transactions of other sectors rose by 15.8 million dollars to 431.0 million dollars, mainly as a result of an increase in personal remittances sent abroad by 24.7 million dollars.

Financial account

In the reporting period, the positive balance of the financial transactions account (excluding transactions with the reserve assets of the National Bank) was 203.9 million dollars (654.1 million dollars in the base period), resulting in net outflow of capital or «net lending to other countries»³.

Figure 2 below shows the dynamics of the account of financial transactions with the accentuation on instruments in its structure.

A low level of the financial account surplus was due to the growth of external assets of the National Fund of the Republic of Kazakhstan, the transactions of which are reflected in *General government* sector, which was offset by the net growth of liabilities of the nonbanking sector enterprises (classified as *other sectors*) (Table 8).

| <i>General government</i> | 2612.2 | 3945.5 | 2563.5 | 2346.2 |
| Net acquisition of financial assets | 2626.8 | 3922.1 | 2438.4 | 2210.1 |
| Net incurrence of liabilities | 14.6 | -23.3 | -125.1 | -136.0 |
| <i>Other sectors</i> | -1292.5 | -5306.5 | -3907.9 | -2338.3 |
| Net acquisition of financial assets | 4168.6 | 345.7 | 1904.1 | 620.5 |
| <i>including direct investment transactions</i> | 1870.2 | 425.5 | 1827.1 | -782.4 |
| Net incurrence of liabilities | 5461.1 | 5652.2 | 5812.0 | 2958.8 |
| <i>including direct investment transactions</i> | 4276.9 | 5311.0 | 3805.9 | 2013.4 |

³ According to the new methodology of the balance of payments, a positive sign of the financial account balance and its components indicates that net lending (outpacing the growth of assets over liabilities) contributes to the improvement of the international investment position and the reduction of the net external debt of the country.

Direct investment

As a result of outstripped growth of liabilities over assets a negative balance of 2.9 billion dollars (2.0 billion dollars in the base period) was formed in *foreign direct investment* (FDI).

Net decrease in financial assets on direct investment transactions in the amount of 0.8 billion dollars (a surplus of 1.8 billion dollars in the first quarter of 2013) was due to the partial withdrawal of the capital from overseas branches and subsidiaries by 0.4 billion dollars by Kazakhstan's enterprises (mainly engaged in the activities of the parent companies, consultations on management issues), as well as the reduction of claims under debt instruments (intercompany lending) to foreign fellow enterprises by 0.3 billion dollars.

Net incurrence (growth) of liabilities on FDI in the amount of 2.1 billion dollars (3.9 billion dollars in the base period) is related to an increase of intercompany lending of Kazakhstan's enterprises to their foreign parent companies and reinvestment of revenues in a total amount of 2.8 billion dollars. At the same time, it should be noted that the outflow of capital by foreign direct investors in the amount of 0.7 billion dollars was the result of repurchasing of shares of nonresidents in local enterprises by residents.

From the perspective of the «Direction of investment» principle of the direct investments, the ***Gross inflow of FDI to Kazakhstan***⁴ decreased relative to the base period by 11.7% to 5.8 billion dollars. Among primary industries of investment, the investment of FDI in *crude oil and natural gas production* increased by 18.1% to 2.1 billion dollars. The investment of FDI into the *activities of geological exploration and research* fell by 27.7% to 1.0 billion dollars, *wholesale and retail trade, repair of motor vehicles* - by 26.9% to 736.5 million dollars, *metallurgical production, production of finished metal products except vehicles and equipment* declined by 35.9% to 455.3 million dollars.

In the structure of foreign direct investment gross inflow by countries, as before, the Netherlands dominates (27.4 % from gross receipts of FDI), followed with a large gap by the USA (16.7%), China (6.1%), Switzerland and the Russian Federation (6.0% each), Belgium (5.2%), Canada (4.9%), Great Britain (3.0%) and France (2.9%).

Portfolio investment and financial derivative instruments

A positive balance on *portfolio investment* amounted to 4.3 billion dollars (2.4 billion dollars in the base period) as the result of excessive growth of assets over growth of liabilities in portfolio investment.

Net acquisition of financial assets (growth of assets) on portfolio investment of 4.0 billion dollars was mainly provided by the growth of foreign assets of the National Fund of the Republic of Kazakhstan by 4.1 billion dollars, transactions of which are reflected in the *General government* sector (Table 9).

⁴ Includes inflows into the equity capital of the Kazakhstan's subsidiaries, reinvested earnings and the debt financing attracted from the foreign parent companies excluding repayment.

Table 9

| Balance of portfolio investments | -74.8 | 3843.8 | 2355.4 | 4310.7 |

Net incurrence of liabilities on portfolio investment in the reporting period formed with a negative balance of 0.3 billion dollars that was due to extinguishment of obligations in the form of debt securities by banks. A positive balance on transactions with *financial derivative instruments* amounted to 43.2 million dollars (a negative balance of 50.3 million dollars in the base period). In the reporting period, transactions with derivative instruments, as before, were mostly carried out by Kazakhstan's banks and with assets of the National Fund of the Republic of Kazakhstan.

Other investment

Transactions recorded under account *Other investment* in the reporting period had a negative balance of 1.3 billion dollars (a positive balance of 0.4 billion dollars in the base period) due to an increase of liabilities of residents (by 1.1 billion dollars) in the category of *other investment* and a decrease in foreign assets (by 0.2 billion dollars).

Net incurrence (growth) of liabilities of 1.1 billion dollars was associated with an increase in long-term borrowings of nonbanking enterprises, which are classified as *other sectors*, by 1.2 billion dollars. Overall, the surplus in the medium and long-term investments amounted to 1.2 billion dollars (Table 10).

| Loans | 131.5 | -354.3 | 236.4 | 168.6 |
| Trade credit and advances | 123.3 | 18.8 | 20.5 | -540.5 |
| Other liabilities | -57.7 | -45.3 | 60.1 | -10.3 |
| Net incurrence of liabilities, total | 257.7 | 282.9 | 493.8 | 1055.2 |

On short-term investments, a decrease of liabilities by 122.7 million dollars was caused by a decrease of accounts payable of nonbanking enterprises to nonresidents by 540.5 million dollars.

In the reporting period, a *decrease of assets* under account "Other investments" in the amount of 191.9 million dollars was due to the reduction of foreign assets of the National Fund of the Republic of Kazakhstan on foreign accounts in the amount of 2.1 billion dollars, which was partially offset by the growth of assets of banks and nonbanking enterprises on accounts in foreign banks for a total amount of 1.3 billion dollars (Table 11).

Net outflow of capital from the private sector in the reporting period is estimated at 3.0 billion dollars, while in the base period net inflow of capital was recorded at 609 million dollars (corresponding calculations are given in Appendix I.14).

Available statistics for the last seven years (from 2007 to 2013) shows a stable net inflow of capital by the private sector of Kazakhstan, that is, the excess of capital inflows over outflows. The minimum value of the net inflow was recorded in 2009 (1.8 billion dollars), while the record-high values occurred in the pre-crisis years 2007-2008 (18 and 14 billion dollars) that were favorable for Kazakhstan in the context of access to external financing. The last two years (2012 and 2013) were also

characterized by a stable net inflow of over 8 billion dollars per year. Despite such a favorable picture in annual terms, the quarterly dynamics in separate periods showed net outflow of capital by the private sector. The largest net outflow of 4.3 billion dollars was recorded in the first quarter of 2009.

Reserve assets

International reserves of the National Bank increased by 1.3 billion dollars as a result of transactions. Besides transactions of the National Bank, the growth of reserve assets was associated with the re-conversion of foreign currency of the National Fund of the Republic of Kazakhstan to tenge conducted in the reporting period. Furthermore, a change in the level of international reserves is influenced by exchange rate and valuation changes which are not reflected in the balance of payments.

As of 31 March 2014, the share of monetary gold constituted 23.3% or 6.2 billion dollars (as of 31 December 2013 - 22.5% or 5.6 billion dollars), foreign currency assets - 76.7% or 20.3 billion dollars (as of 31 December 2014 - 77.5% or 19.2 billion dollars) in total volume of international reserves.

Thus, as of March 31, 2014, the international reserves (excluding assets of the National Fund of the Republic of Kazakhstan) were estimated at 26.5 billion dollars, which provide funding for Kazakhstan's imports of goods and services for 5.3 months.

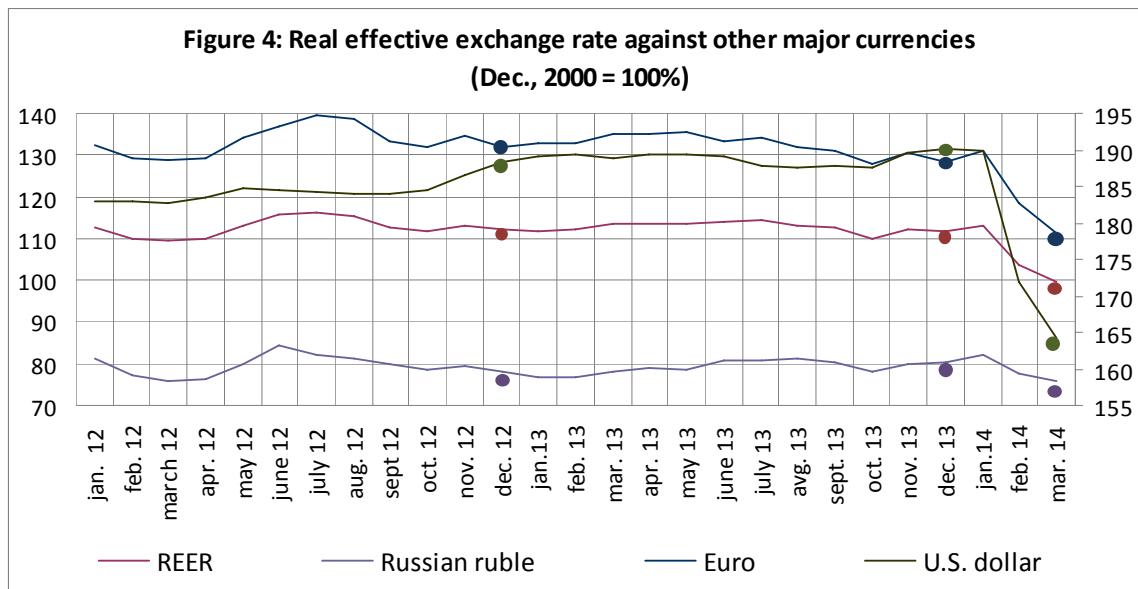

Dynamics of the real effective exchange rate

In the first quarter of 2014 the dynamics of the real effective exchange rate (REER) index of tenge was multidirectional. In January 2014, outstripped rates of weakening of the Russian ruble and a number of other currencies of trade partner countries created preconditions for a substantial strengthening of the exchange rate of the tenge in real terms. In February 2014, as a result of the exchange rate adjustment, the real devaluation of tenge totaled 8.5%. In March 2014, the REER index trend continued weakening and by January 2014 was (-) 12.0%.

At the end of the first quarter of 2014, the REER index decreased by 10.9% and reached 99.6 (99.3 as of December 2009) against a base level of competitiveness of December 2000 (base period). The REER index calculated against a basket of currencies of the CIS countries in March 2014 decreased by 4.4% compared to December 2013, while in relation to the currencies of other countries tenge devalued in real terms by 12.9%.

Bilateral real exchange rates of the tenge against the currencies of main trade partner countries showed a decreasing trend. Thus, in March 2014 compared with December 2013, the weakening of tenge's REER to ruble was recorded at the level of 5.8% (thereby the stock of real undervaluation of tenge to ruble increased to 24.3% relative to the base period), weakening against the euro was 13.3%, against the dollar – 13.6% and against the yuan – 12.7%.

**INTERNATIONAL INVESTMENT POSITION
OF THE REPUBLIC OF KAZAKHSTAN
as of March 31st, 2014**

From the first quarter of 2013, Kazakhstan's balance of payments is compiled in accordance with the sixth edition of "Balance of Payments and International Investment Position Manual" (BPM6). The main methodological changes are provided in the press release of the National Bank No.25, which is available on the following webpage: <http://www.nationalbank.kz/?docid=199&switch=english>. Full implementation of BPM6 based on updated data sources is planned for 2014-2015.

IIP presents the difference between accumulated stocks of country's foreign financial assets and liabilities. It reflects changes that happened during the period, such as: changes attributable to transactions - as a result of transactions in different financial instruments (that fully correspond to the financial account of the Balance of Payments); valuation changes – caused by exchange rate and price fluctuations of financial instruments; other changes – as a result of revision of transactions' classification, write-offs of bad debts, different coverage of respondents, etc.

Appendix II provides data on direct investment compiled according to the directional principle in accordance with BPM6 and the 4th Edition of «Benchmark Definition of Foreign Direct Investment».

International Investment Position (IIP) of Kazakhstan improved (increased) by 6.4 billion US dollars (billion USD) during the first quarter of 2014 and as of March 31st, 2014, amounted to (-) 25.6 billion USD. The improvement (increase) of the IIP was caused by both an increase in the country's external assets and by a decrease in external liabilities (Diagram 1, Attachment 1).

The country's external assets during the reporting period increased by 4.1 billion USD, amounting to 181.2 billion USD as of the end of March. The increase was caused mainly by transactions in financial instruments (Table 1). The country's external liabilities decreased during the first quarter of 2014 by 2.4 billion USD, amounting to 206.7 billion USD as of the end of March. The decrease was mainly caused by a reduction of equity value of Kazakhstan's enterprises in dollar equivalent after the adjustment of exchange rate of tenge in the reporting period.

In the reporting quarter, the IIP of debt instruments¹ improved by 1.5 billion USD and as of the reporting date, amounted to (-) 15.8 billion USD. This negative value characterizes the country as a "net borrower." Therefore, Kazakhstan's net external debt² that represents the IIP of debt

¹Debt instruments include currency and deposits, debt securities, loans, insurance, pension, and standardized guarantee schemes , trade credit and advances, special drawing rights, other accounts receivable and accounts payable

² More details on external debt can be found in analytical report «External debt of Kazakhstan»

instruments with the opposite sign as of the end of the 1st quarter of 2014 amounted to 15.8 billion USD.

Table 1. Transaction and other changes of IIP of Kazakhstan

In breakdown of the IIP by economic sectors of Kazakhstan, Central bank (the National Bank of Kazakhstan), General Government and Banks (Deposit-taking corporations, except Central bank) are characterized as “net lenders” (Attachment 2) because their foreign assets exceeded their foreign liabilities, including debt instruments, at the end of the 1st quarter of 2014

Other sectors³ continue to be in a position of “net borrower”. As of March 31st of the current year, foreign liabilities of Other sectors exceeded foreign assets by 134.7 billion USD. During the first quarter of the current year, net external debt of Other sectors increased by 2.1 billion USD, amounting to 106.3 billion USD as of the end of March.

The composition of foreign assets and liabilities by economic sectors of Kazakhstan is presented in Diagram 2.

A predominant part of foreign assets of the General Government is attributable to the National Fund of Kazakhstan (NFK), which, as of March 31st, 2014, amounted to 72.8 billion USD or 40% of the country’s foreign assets; of the Central bank – to reserve assets: 26.5 billion USD or 15% of the country’s foreign assets. The composition of the NFK and reserve assets of the National Bank of Kazakhstan⁴ is presented in Diagram 3.

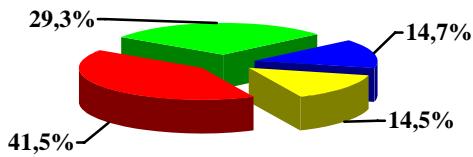

As before, in **breakdown of the IIP by types of investment**, portfolio investment including the NFK represents a dominant share of foreign assets, while direct investment dominates in foreign liabilities (Diagram 4).

³ Other sectors by sectors of economy in the composition of the IIP also include assets/liabilities bound by direct investment relationship, while in the statistics of external debt, liabilities of direct investment (i.e. intercompany lending) are distinguished in a separate category.

⁴ Composition of foreign assets of the NFK and reserve assets of the National Bank in statistics of the IIP can be slightly different from the composition in other sources due to the specificity of accounting of financial derivatives in the composition of those assets according to BMP6.

■ portfolio investment

■ other investment

The IIP breakdown by types of financial instruments stayed unchanged. Predominant part of foreign assets is taken up by debt securities mainly due to the NFK and reserve assets of the NBK: 43% as of the end of the first quarter of the current year or 78.6 billion USD (Diagram 5). In foreign liabilities, the largest share is represented by loans and borrowings: 57% as of March 31st, 2014, or 118.1 billion USD that also include currency attracted from the world financial markets through their subsidiary special purpose entities (SPE). SPEs, in turn, borrow in the form of loans and Eurobonds.

Investment Position of Banks sector

The investment position of Banks (Deposit-taking corporations, except Central bank) is improving and their position as “net lender” is strengthening in dynamics (Diagram 6).

As of March 31st, 2014, the Investment position of Banks (Deposit-taking corporations, except Central bank) reached 13.2 billion USD, including net external debt – (-)15.1 billion USD. Therefore, debt instruments in foreign assets exceeded debt instruments in foreign liabilities by 15.1 billion USD.

Foreign assets of Banks as of the end of the first quarter of the current year amounted to 26.3 billion USD (14% of external assets of Kazakhstan), decreasing during the reporting quarter by 14.8 million USD. In addition, 49% of banks' foreign assets (12.8 billion USD as of March 31st, 2014) are comprised of loans of nonresidents to Banks (Diagram 7).

Overall, during the reporting period, loans of nonresidents to Banks (Deposit-taking corporations, except Central bank) decreased by 0.1 billion USD. In breakdown of the banks' credit portfolio by countries (Diagram 8, Attachment 3), a predominant part of unexpired loans of nonresidents was attributable to the Russian Federation and Netherlands, while that of expired loans – to the Russian Federation and Seychelles.

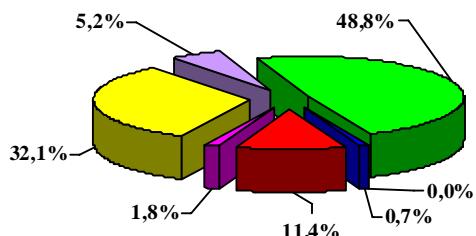

During the first quarter of the current year, the volume of foreign currency in Banks increased by 0.4 billion USD, and as of March 31st, 2014, amounted to 1.1 billion USD (4.3% of banks' foreign assets).

As of the end of the first quarter of the current year, external liabilities of Banks equaled 13.0 billion USD (6% of external liabilities of Kazakhstan), decreasing during the reporting period by 0.8 billion USD. The largest share (41%) in the external liabilities falls on debt securities of Banks (mainly – Eurobonds) held by nonresidents.

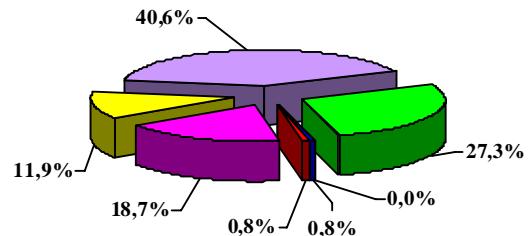

A decrease in external liabilities (except for a decrease in external debt) is due to the strengthening of the exchange rate of US dollar to tenge and to price fluctuations of Banks' assets (Diagram 9). Overall, as of March 31st, the share of nonresidents in capital of Banks equaled 2.4 billion USD, a decrease of 0.2 billion USD.

Investment position of Other sectors

As dynamics show, the investment position of Other sectors deteriorated, which strengthened its position as a “net borrower” (Diagram 10).

**Diagram 10. IIP of Other sectors
as of the end of period**

As of March 31st, 2014 the investment position of Other sectors equaled (-) 134.7 billion USD, increasing by 1.7 billion USD during the reporting period. As of the end of the first quarter of the current year, net external debt of Other sectors amounted to 106.3 billion USD and showed an upward trend.

During the first quarter of the current year, foreign assets of Other sectors decreased by 93.7 million USD and came to 53.1 billion USD (29% country's foreign assets).

Foreign liabilities of Other sectors decreased during the period by 1.8 billion USD. During the first quarter of the current year, a reduction was observed on instruments of participation of nonresidents in the capital of Kazakhstan's companies, whereas debt instruments in the first quarter of this year increased. A decrease on instruments of participation of nonresidents in equity capital of Kazakhstan's companies was mainly caused by a reduction of equity value of Kazakhstan's enterprises in dollar equivalent after the adjustment of tenge exchange rate in the reporting period.

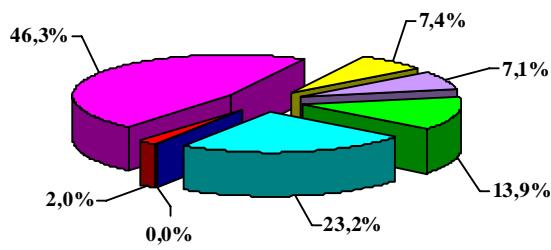

As of March 31st, 2014 external liabilities of Other sectors reached 187.8 billion USD (91% of external liabilities of Kazakhstan). The largest share of foreign liabilities is formed by loans and loans from nonresidents (Diagram 11).

As of the end of the first quarter of the current year, investment position of other financial organisations (enterprises) subsector equaled (-)1.6 billion USD. As of the reporting date, this subsector is considered from the position of "net lender" because external borrowings to other equities exceeded external debt by 348.2 million USD.

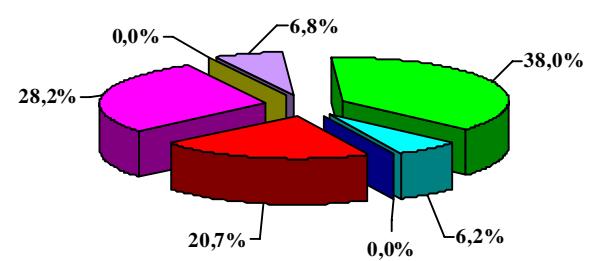

As of March 31, 2014, the investment position of nonfinancial organizations, households and NPISHs (nonprofit institutions serving to households) subsector amounted to (-)133.1 billion USD, while net external debt equaled 106.7 billion USD, which characterizes the subsector as a "net borrower".

**Diagram 11. IIP of Other sectors
by types of financial instruments
as of 31.03.2014**

a. Composition of foreign assets

b. Composition of foreign liabilities

- Equity and investment fund shares

- Debt securities
- Loans
- Trade credits and advances
- Financial derivatives
- Other accounts payable

Continued implementation of large-scale infrastructure and industrial projects with participation of foreign capital predetermines further growth of net external debt and deterioration of investment position of Other sectors (including nonfinancial organizations, households and NPISHs subsectors). Breakdown of the IIP by countries and types of residents' economic activities is presented in Attachment 4-6.

¹ Net means assets minus liabilities² according to the asset/liability principle³ movement of all obligations of foreign subsidiaries on issued debt securities to resident parent country (the issuer change), which is shown by the country of trustee-nonresidents⁴ Not determined by country:

- in assets and liabilities: financial derivatives;

- in liabilities: syndicate of foreign banks, from which government loans are attracted (by the Ministry of Finance of Kazakhstan); nonresidents' deposits and accounts in Kazakhstan banks (excl. Russian Federation); interest liabilities (direct and other investments);

- in reserve assets: monetary gold.

* On October 10th, 2010 The Netherlands Antilles stopped to exist as a country within the Kingdom of the Netherlands. Curacao and Saint Martin became separate autonomies.

External liabilities of residents of Kazakhstan by types of their economic activity and main countries

mln USD

Gross inflow of direct investment in Kazakhstan from foreign direct investors includes:

- increase of equity: purchase of at least 10% of the voting shares or shares in Kazakhstani enterprises by non-residents, purchase of real estate in Kazakhstan by non-residents
- reinvested earnings: share of foreign direct investors in undistributed income (loss) in Kazakhstani enterprises
- increase of debt instruments: flow of funds from foreign direct investors (both in cash and another form - as goods, services, intangible assets, purchase of securities and so on) without amortization

* On October 10th, 2010, The Netherlands Antilles stopped to exist as a country within the Kingdom of the Netherlands. Curacao and Saint Martin became separate autonomies.

Gross outflow of direct investment abroad from Kazakhstani direct investors: breakdown by residents' types of economic activities
over a period, mln. USD

Gross outflow of direct investment abroad from Kazakhstani direct investors includes:

- increase of equity: purchase of at least 10% of the voting shares or shares in foreign enterprises by residents, purchase of real estate abroad by residents
- reinvested earnings: share of Kazakhstani direct investors in undistributed income (loss) in foreign enterprises
- increase of debt instruments: flow of funds from Kazakhstani direct investors (both in cash and another form - as goods, services, intangible assets, purchase of securities and so on) without amortization

Methodological commentary to the balance of payments and the international investment position

The international accounts for an economy summarize the economic relationships between residents and nonresidents. They comprise the following¹: the balance of payments (BP), the international investment position (IIP), and the other changes in financial assets and liabilities accounts.

The international accounts provide an integrated framework for the analysis of an economy's international economic relationships, including its international economic performance, exchange rate policy, reserves management, and external vulnerability.

Methodological commentary to the balance of payments

The balance of payments is a statement that summarizes economic transactions between residents and nonresidents during a period.

Compilation and evaluation of BOP is conducted based on the International Monetary Fund's methodology – Balance of Payments and International Investment Position Manual (sixth edition, 2009) (BPM6) in accordance with standard accounting rules and definitions.

Main BOP compilation rules and definitions:

- recording of transactions between residents and nonresidents;
- recording of transactions according to double-entry system;
- recording of flows rather than stocks;
- valuation of transactions and transfers denominated in different currencies in a single unit of account;
- recording of transactions at the time of the change of ownership;
- recording of transactions by type and by sector.

Residents and nonresidents. Each institutional unit is a resident of one and only one economic territory with which it has the strongest connection, expressed as its center of predominant economic interest. An institutional unit is resident in an economic territory when there exists, within the economic territory, some location, dwelling, place of production or other premises on which or from which the unit engages and intends to continue engaging, either indefinitely or over a finite but long period of time, in economic activities and transactions on a significant scale.

Flows refer to economic actions and effects of events within an accounting period. International flows are recorded in the accounts as transactions or other changes in financial assets and liabilities. Flows reflect the creation, transformation, exchange, transfer, or extinction of economic value; they involve changes in the volume, composition, or value of an institutional unit's assets and liabilities.

Double-entry system

A transaction is an interaction between two institutional units that occurs by mutual agreement or through the operation of the law and involves an exchange of value or a transfer.

Each transaction involves two entries – a credit and a debit entry – for each party to the transaction. This principle ensures that the total of all credit entries and that of all debit entries for all transactions are equal, thus permitting a check on consistency of accounts for a single unit.

In the current and capital accounts, a credit denotes entries from exports, primary income receivable, transfers receivable, and disposals of nonproduced nonfinancial assets. A debit is used to record entries for imports, primary income payable, transfers payable and acquisitions of nonproduced nonfinancial assets.

In the case of transactions in financial assets and liabilities, the terms "net acquisition of financial assets" and "net incurrence of liabilities" are used. The interpretation of increase (decrease) under the credit or debit notion depends on whether the increase (decrease) refers to assets or liabilities (a debit for an asset is an increase, a debit for a liability is a decrease).

In accordance with the double-entry basis of BOP statistics, each transaction is recorded as consisting of two entries where the sum of credit entries equals the sum of debit entries.

¹ External debt is often attributed to the external sector statistics. Standard report on external debt is a structural part of the IIP, but due to its important analytical value, the external debt is usually regarded as a separate component of the external sector statistics

Transactions registration time is determined according to the accrual basis. Transactions are registered at the time when economic value is created, transformed, exchanged, transferred or extinguished. The emergence of financial claims and liabilities is associated with the change of ownership right for any resources from one party of an international transaction to another. Such a transition can be legalized, and may involve the actual transfer of resources or establishment of control over these resources by the other party. In the case of non-obvious transition of economic ownership right, the transition is considered to occur when parties of the transaction record it in their books or accounts.

Changes in the volume of assets and liabilities that occur as a result of transactions are recorded in the BOP. The BOP transactions involve both transactions that are accompanied by actual payments and those that do not involve cash payments.

Valuation of transactions. Transactions are valued at their actual market price recorded in contracts and agreements between independent parties of the transaction.

International accounts are formed for the following sectors: the central bank, banks (deposit-taking corporations except the central bank), general government, and other sectors including other financial corporations and nonfinancial corporations, households and nonprofit institutions serving households (NPISHs). Classification and sectorization systems meet international standards.

Main BOP accounts

Standard BOP structure consists of the following accounts: the current account (the goods and services, the primary income, the secondary income), the capital account and the financial account.

The current account shows flows of goods, services, primary income, and secondary income between residents and nonresidents. The current account balance shows the difference between the sum of exports and income receivable and the sum of imports and income payable (exports and imports refer to both goods and services, while income refers to both primary and secondary income).

The current account and capital account exclude the use of a "minus" sign while showing imports of goods and services as well as primary and secondary incomes paid. At the same time, the balance of relevant accounts (goods, services, primary income and secondary income) is defined as the difference between the credit and the debit entries.

Current account:

Main components of the "**Goods**" account are export and import of goods on a balance of payments basis, net exports of goods under merchanting, nonmonetary gold.

Nonmonetary gold covers all gold other than monetary gold. In its turn, monetary gold is a financial asset that is not created by an instrument and that does not represent a claim on another entity and acts as a means of international payments and store of value for use in reserve assets.

Export and import of general merchandise on a balance of payments basis covers goods (as well as re-export), whose economic ownership is changed between a resident and a nonresident and that are not included in the following specific categories: goods under merchanting, nonmonetary gold, parts of travel, construction, and government goods and services not included elsewhere.

Re-exports are foreign goods (goods produced in other economies and previously imported) that are exported with no substantial transformation from the state in which they were previously imported.

Merchanting is defined as the purchase of goods by a resident (of the compiling economy) from a nonresident combined with the subsequent resale of the same goods to another nonresident without the goods being present in the compiling economy.

The difference between sales over purchases of goods for merchanting is shown as the item "net exports of goods under merchanting". As a result of losses or increases in inventories, net exports of goods under merchanting may be negative in some cases.

Nonmonetary gold in the form of bullion or other forms is shown as a separate article in the goods.

Services cover the services that are performed by residents for nonresidents and vice versa. The following types of services are included in the BOP: manufacturing services on physical inputs owned by others; maintenance and repair services; transport (including postal and courier services); travel; construction; insurance and pension services; financial services; charges for the use of intellectual property not included elsewhere; telecommunications; computer and information services; other business services; personal, cultural, and recreational services; government goods and services not included elsewhere.

In accordance with the balance of payments basis, the time of recording of service entries in the international accounts is the time at which the service is delivered. The provision of services should be recorded on an accrual basis in each accounting period, i.e. they should be recorded as they are rendered. To the extent that the time of payment differs from the time of delivery, there may be trade advances (financial assets and liabilities that are extinguished as the service is provided) or trade credits (financial assets and liabilities that arise as the service is provided).

Primary income includes compensation of employees, investment income and other primary income.

Compensation of employees presents remuneration in return for the labor input to the production process contributed by an individual in an employer-employee relationship with the enterprise. In international accounts compensation of employees is recorded when the employer and the employee are resident in different economies.

Compensation of employees has three main components:

- 1) wages and salaries in cash;
- 2) wages and salaries in kind;
- 3) employers' social contributions.

Investment income is the return for providing financial assets, including dividends, reinvested earnings and interest, that is, income from direct, portfolio, other investments and reserve assets.

Dividends are distributed earnings allocated to the owners of equity for placing funds at the disposal of the corporation.

Reinvested earnings represent the direct investor's proportion, in terms of equity held, of the earnings that foreign subsidiaries and associates do not distribute as dividends. In some cases reinvested earnings can be negative, for example, when a direct investment enterprise experiences a loss or when the dividends payable in a period exceed the net income in that period. Similar to positive reinvested earnings that are treated as a capital injection in the direct investment enterprise by the direct investor, negative reinvested earnings are considered to be a withdrawal of funds from the capital.

Interest is a form of investment income that is receivable by the owners of certain kinds of financial assets namely deposits, debt securities, loans, and other accounts receivable and payable for putting the financial asset at the disposal of another institutional unit. Interest is recorded on an accrual basis, that is, interest is recorded as accruing continuously over time to the creditor on the amount outstanding.

Investment income attributable to policy-holders in insurance, standardized guarantees, and pension funds represents returns to policyholders on their claims in insurance and standardized guarantee schemes in the form of technical reserves and income payable on pension entitlements.

Other primary income includes taxes on production and imports, subsidies and rent.

Secondary income account shows current transfers between residents and nonresidents. Current transfers represent compensating entries that correspond to the provision of a good, service, financial asset or another nonproduced asset when there is no corresponding return of an item of economic value. This article covers grants, humanitarian and technical aid, government contributions to various international and intergovernmental organizations, taxes and personal transfers. Current transfers are classified according to institutional sectors making or receiving transfers. The balance on the secondary income account presents total receipts less total payments.

Capital account

Capital account covers any international transactions with nonproduced, nonfinancial assets and capital transfers between residents and nonresidents. Nonproduced, nonfinancial assets consist of natural resources, contracts, leases, licenses and marketing assets.

Capital transfers are transfers in which the ownership of an asset (other than cash or inventories) changes from one party to another or which obliges one or both parties to acquire and dispose of an asset (other than cash or inventories) or where a liability is forgiven by the creditor.

Financial account

The financial account records transactions that involve financial assets and liabilities and that take place between residents and nonresidents.

The financial account indicates the functional categories, sectors, instruments and maturities used for net international financing transactions. Flows in financial assets and liabilities in international accounts are recorded on net basis. Change in external debt as a result of the revaluation of assets and liabilities in the financial account is not recorded. Entries in the financial account can be corresponding entries to goods, services, income, capital account and other financial account entries.

In the financial account the terms "net acquisition of financial assets" and "net incurrence of liabilities" are used instead of "assets" and "liabilities". If there is an increase of assets or liabilities, it is shown with a "plus" sign; if there is a decrease in assets or liabilities, it's shown with a "minus" sign. The balance on the financial account is defined as the difference between assets and liabilities.

Financial assets consist of claims of residents on nonresidents and "gold bullion" component under monetary gold.

A claim is a financial instrument that gives rise to an economic asset, which corresponds to a balancing obligation.

In the financial account assets and liabilities are classified by their functional category by the following main components: direct investment, portfolio investment, financial derivatives and stock options for employees, other investments and reserve assets.

Direct investment is a category of cross-border investment associated with a resident in one economy having control or a significant degree of influence on the management of an enterprise that is resident in another economy (owns equity that entitles it to 10 percent or more of the voting power in the management of the direct investment enterprise). Direct investment is classified as investment by a direct investor in its direct investment enterprise, return investment by a direct investment enterprise in its own immediate or indirect direct investor, or investment between resident and nonresident fellow enterprises.

Direct investment transactions according to the type of financial instrument are divided into equity and investment fund shares, reinvestment of earnings and debt instruments.

Return investment arises when a direct investment enterprise lends funds to or acquires equity in its immediate or indirect direct investor provided it does not own equity comprising 10 percent or more of the voting power in that direct investor.

Fellow enterprises are enterprises that are under the control or influence of the same immediate or indirect investor but neither fellow enterprise controls or influences the other fellow enterprise.

Portfolio investments include transactions involving debt or equity securities other than those included in direct investment or reserve assets.

Financial derivatives and employees stock options are financial instruments that are linked to another specific (base) instrument and through which specific financial risks (interest rate and foreign exchange risk, equity and commodity price risk, credit risk, etc.) can be traded in their own right in financial markets. Derivative financial instruments are classified into forward-type contracts and options.

Other investment includes other equity, currency and deposits, loans, insurance and pension programs, standardized guarantee programs, trade credit and advances, other accounts receivable and payable, SDR allocations.

Other equity is included in other investments when it is not direct investment or reserve assets. Other equity is not in the form of securities, so it is not included in portfolio investments.

Reserve assets are external assets that are readily available to and controlled by monetary authorities for meeting the balance of payments financing needs, for intervention in exchange markets to influence the currency exchange rate and for other related purposes (such as maintaining confidence in the currency and the economy, and serving as a basis for foreign borrowing).

The imbalance in the balance of payments account is called **net errors and omissions**. Net errors and omissions are derived residually as net lending/net borrowing and can be derived from the financial account minus the same item derived from the current and capital accounts.

The balance of payments has standard and analytic presentation. The standard presentation groups international transactions with goods, services, income and financial values consistent with the SNA and other macroeconomic statistics as a result of which the balance between transactions equals zero.

The analytic presentation is a reorganization of the standard presentation of balance of payments statistics to facilitate a basic distinction between reserves and closely related items and other transactions.

Methodological commentary to the international investment position

The international investment position (IIP) is a statistical statement that shows at a point in time the value and composition of:

financial assets of residents of an economy that are claims on nonresidents and gold bullion held as reserve assets;

liabilities of residents of an economy to nonresidents.

The difference between an economy's external financial assets and liabilities is the economy's net IIP, which may be positive or negative.

IIP consists of direct investment, portfolio investment, financial derivatives and employees stock options, other investment, and reserve assets.

The values in the IIP at the end of the period result from transactions and other flows in the current and previous periods. The integrated IIP statement consists of the IIP, the financial account and the other changes in financial assets and liabilities.

Other flows are changes in the volume, value, or classification of an asset or liability that do not result from a transaction between a resident and a nonresident. Other flows cover various kinds of changes in assets and liabilities that are recognized analytically under two broad types:

- 1) other changes in the volume of assets and liabilities reflect entrances of new assets into balance sheets and exits of existing assets and liabilities from balance sheets that are not caused by interactions by mutual agreement between institutional units (i.e. transactions)
- 2) revaluations (holding gains and losses) on an asset or liability arise from changes in their prices and/or the exchange rates.

IIP is compiled on the basis of BPM6. Methodological approaches to the compilation of the IIP and BOP completely coincide.

IIP and BOP compilation practices

Statistical reports on transactions with financial assets and liabilities serve as source data for the compilation of international accounts (BOP, IIP, external debt). Reports submitted by respondents are checked and revised according to the National Bank's results of registration and notification of foreign exchange transactions involving the movement of capital, as well as information from banks and professional participants of the securities market.

Appendix V.1

Methodological principles for assessing the volume of "shuttle" trade

A significant part of Kazakhstan's foreign trade turnover consists of the "shuttle trade" - unorganized, i.e. that does not fall within the official customs statistics, foreign trade transactions of individuals. The National Bank of Kazakhstan estimates such transactions to include them in the articles of the trade balance as an adjustment on coverage.

The total estimate of the goods imported/exported by individuals with the purpose of subsequent resale is calculated as the product of the number of "shuttle traders" and the average cost of their imported and exported goods.

One of the main sources for determination of the proportion of individuals engaged in "shuttle" business and the list of countries with which the "shuttle" trade is most active were the results of the border survey of passengers conducted in October 2000 in collaboration with the customs authorities at major border auto junctions, railway checkpoints, and international airports. The survey allowed establishing the proportion of the exiting and the entering by region and trip purposes as well as the average amount of personal expenses for travel and the amount spent by "shuttle traders" for commercial purposes. In addition, to determine the average value of goods per one "shuttle trader", data from the Customs Committee on the goods transported by individuals and declared under the simplified procedure were used.

Shuttle imports calculations from the non-CIS countries:

Baseline information is the data of the Border Service of the National Security Committee of the Republic of Kazakhstan on the number of individuals crossing the border of the country. According to the survey results, the Kazakh "shuttle" raids are carried out mainly in China and Turkey.

Across the non-CIS countries the average value of goods purchased by "shuttle traders" is estimated to be \$5000 since the goods imported by individuals in excess of that amount are subject to declaration and recognized in customs statistics. The share of "shuttle traders" is set on average at 60% of those leaving the Republic of Kazakhstan for the purpose of tourism and private trips to China and Turkey and 20% - for the non-CIS countries. Contiguity of borders suggests more intensive trade, so calculations on China also include the nonresidents who exit the country to enter Kazakhstan with a private purpose and as a tourist.

Shuttle imports calculations from the CIS countries:

Based on the results of the survey, average expenditure on goods imported by a "shuttle trader" from the Russian Federation, Kyrgyzstan and Uzbekistan is determined, which is then multiplied by the estimated number of "shuttle traders". The average expenditure on goods imported by "shuttle traders" from the Russian Federation was set at \$1500, from Kyrgyzstan and Uzbekistan - \$500. The number of shuttle traders is defined as the proportion of the number crossing the border with a private purpose (according to the Russian Federal Border Service and PS RK NSC): 25% of those crossing the border from the Russian Federation, 20% from Kyrgyzstan and 30% from Uzbekistan. At the same time only the exiting residents are taken into account for Russia, whereas for Kyrgyzstan and Uzbekistan – the exiting residents and also nonresidents exiting these republics.

Shuttle exports calculations to the CIS countries:

Given that goods for resale by individuals are not exported to other countries, the calculations of shuttle exports are made only for the CIS countries.

The survey allowed obtaining quantitative ratios for determining the shuttle traders exporting goods to the CIS countries - 15% from the number of residents traveling to the Russian Federation for private purposes and 30% - from the number of residents traveling to Uzbekistan,

as well as nonresidents exiting these countries. Average expenditure was determined from the results of the survey and amounted to \$500 for export to Russia and \$350 to Uzbekistan.

Appendix V.2

Methodological principles for estimating the value of imports in FOB prices and the calculation of transport costs during exports and imports of goods

Data generated on the basis of customs freight declarations of official statistics on the import of goods reflect the value of the goods at the customs border of Kazakhstan. That is, during an import of goods from countries that do not have a common border with Kazakhstan, the customs value of imported good in addition to the value of the good at the customs border of the importer (FOB-type valuation) includes the cost of insurance and freight transportation to the border of Kazakhstan (CIF-type valuation).

In the balance of payments the values of exports and imports of goods are recorded in the FOB-type prices (loading goods at the expense of the buyer) at the customs border of the seller of the goods, while the costs of insurance and freight transportation are reflected in the relevant articles of the balance of international services. Therefore, in order to accurately reflect the data in the balance of payments, a correction to the classification is introduced in the customs statistics data on import of goods - the costs of insurance and transportation, which are already included in the import of international services in the "insurance services" and "freight transportation" articles, are deducted from the CIF-type value of imports.

The sources for determining the share of the cost on insurance and freight transportation in the cost of imported goods are specialized surveys of exporters and importers which are held by the National Bank on an annual basis. On the basis of the survey results for 2002-2004. ("Questionnaire survey of enterprises on the costs of transportation and insurance during exports and imports of goods" as a form of statistical report was introduced in 2002) average estimated coefficients for recalculation of imports of goods from CIF prices to FOB prices and calculation of freight services by mode of transport were obtained. The coefficients were estimated across border countries and other countries.

In order to obtain comparable analytically significant amount of data on trade in goods and services, as well as to ensure the formation of the balance of services by expanded classification (introduced by the International Monetary Fund in 2000), new estimated coefficients derived in 2004 were applied to the balance of payments data starting with 2000.

According to the results of specialized surveys subsequent revisions of estimated coefficients will be made if the survey data differs significantly from the average of the coefficients (for example, when new methods and routes of freight transportation appear). During revisions of the coefficients the principle of averaging data for periods that are characterized by the changes will be retained.

Appendix V.3

Methodological principles for estimating exports and imports of international services under the "Trips"

In accordance with the methodology of the balance of payments, the article "Travel" covers primarily the goods and services that are acquired in the country by visitors (nonresidents of Kazakhstan, residents abroad) if their stay does not exceed one year. The amount recorded in the balance of payments under this article is an estimate of the expenditure of visitors for purchase of goods and services in the visiting country. This group does not include the carriage of passengers in international traffic (ticket price) which is accounted for in the article "Passenger services".

Exports/imports of services under the "Travel" are calculated as the product of the average expenditure on a single trip and the number of the exiting/the entering.

The average expenditure per trip is defined by survey of individuals crossing the border of Kazakhstan by country of destination/arrival and trip purposes (work, tourism, private).

The Border Service of Kazakhstan National Security Committee and the Federal Border Service of the Russian Federation data provide the initial information on the number of the exiting/the entering by citizenship, purpose of travel and countries.

These guidelines for the calculation of the article "Travel" are applied from the 1st quarter of 2001.

Appendix V.4

Methodological principles for estimating "Remittances"

In accordance with the methodology of the balance of payments "Remittances" signify money transfers of migrant workers residing outside their own country for more than a year, i.e. being residents of the host country.

"Remittances" article of the balance of payments of Kazakhstan is formed according to the banking statistics data on international money transfers of individuals by their residency, sender/recipient country and purposes of transfer. At the same time bank statements do not contain information about the origin of these funds and the senders' citizenship. Taking into account the flow of funds as payments for purchased goods and services (considering country distribution of remittances) in the reporting data on non-repayable money transfers, estimates of the share of non-repayable remittances of individuals in the total amount of personal transfers that are classified by senders as non-repayable are conducted. Thus, this article shows trans boundary non-repayable transfers of individuals according to bank statistics data taking into account the estimates of the National Bank.

Methodological approaches to this estimation were developed from the results of December 2010 anonymous survey with the participation of Kazakhstani banks on individual-remitters. Based on the survey results averaged coefficients to calculate the percentage of non-repayable transfers were obtained, where the coefficients were estimated by countries, by direction (from Kazakhstan/to Kazakhstan) and by methods (using a bank account and through international money transfer systems).

These coefficients are used to estimate the Remittances, starting with the 1st quarter of 2009. At the same time transactions carried out through international money transfer systems are taken into account in this article.

Appendix V.5

Principles of calculating the real effective exchange rate index

The real effective exchange rate index (REER) is a weighted average change of tenge exchange rate against the currency basket of main trade partners of Kazakhstan corrected for changes in relative prices.

An increase\decrease in the index signifies tenge appreciation\depreciation in real terms against the basket of currencies of countries with which Kazakhstan engages in trade transactions, which, other things being equal, means that domestic producers have more\less competitive advantages in the domestic and external markets.

Algorithm for calculating the index of the real effective exchange rate (REER)

Initial parameters:

1. Weights of Kazakhstan trade partners in total trade turnover. Countries that belong to the currency basket account for about 90% of the total registered trade turnover.
2. Nominal exchange rates of trade partner country currencies to US dollar.
3. CPI change in trade partner countries.
4. Tenge\US dollar exchange rate.
5. Kazakhstan's CPI change.
6. Selection of the base period.

Data transformation

- Normalization of trade partner weights, calculation of country share w_i in the total commodity trade turnover:

The current year weight is calculated by means of averaging given country weight in group total commodity trade turnover for three preceding years.
where

w_{ji} - country weight in the total commodity trade turnover for the group for the current year

$$w_{ji} = \frac{t_{j(i-1)} + t_{j(i-2)} + t_{j(i-3)}}{T_{i-1} + T_{i-2} + T_{i-3}}$$

$T_{i-1\dots i-3}$ - commodity turnover for the group of countries for three preceding years

$t_{j(i-1)} \dots t_{j(i-3)}$ - country commodity turnover for three preceding years

Thus to calculate REER index for 1999 we use the weights computed based on trade statistics data for 1996-1998; for 2000 – 1997-1999 and so on. For 1995-1997 since there is no data for the three preceding periods average weights for 1995-1997 are used.

- Transformation of CPI to the base period
- Calculation of tenge cross exchange rate in terms of trade partner currency units - S_i^T for every reporting period:

Tenge cross exchange rate = Foreign currency exchange rate to US dollar / Tenge exchange rate to US dollar

Calculation of the real effective exchange rate index (REER)

- I. Calculation of tenge exchange rate change for a reporting period relatively to the base period:

$$\Delta S_i = S_i^T / S_i^0,$$

where

ΔS_i - tenge exchange rate change for the reporting period denominated in foreign currency units (reverse quotation);

S_i^T - tenge exchange rate for the reporting period;

S_i^0 - tenge exchange rate for the base period.

- II. Calculation of the nominal effective exchange rate index (NEER)

$$NEER = 100 * \Pi_i (\Delta S_i)^{w_i}$$

where

w_i - weight of country i in the total commodity trade turnover;

Π_i - multiplication of tenge exchange rate against trade partner countries currencies change indices taking into

account normalized weight of a country in the total country group commodity trade turnover.

III. Calculation of the real effective exchange rate index (REER)

$$\text{REER} = 100 * \Pi_i (\Delta S_i * (P^d / P_i^f))^w$$

where

- P_i^f - price level in i country – trade partner of Kazakhstan;
- P^d - price level in Kazakhstan;
- Π_i - multiplication of tenge exchange rate against trade partner countries' currencies change indices, corrected for relative prices taking into account normalized weight of a country in the total country group commodity trade turnover.

The use of three-year period for calculation of trade partner country weights in the county's trade turnover is the most optimal option. This approach allows smoothing influence of different short-term factors on commodity trade flows. At the same time the risk of using old structure of commodity trade in the weighting scheme is negligible. Changes in the geographical distribution of commodity trade flows are actualized as soon as new data for a given period is received. The National Bank of Kazakhstan updates trade weights annually.

For analytical purposes, The National Bank of Kazakhstan also calculates real effective exchange rate index on the basis of weights excluding external trade transactions with oil and gas condensate. As the influence of exchange rate fluctuations on the competitive advantage of the exporters and importers of these commodities is negligible (in this case the most important factor is the change in world prices for fuel commodities), this index can provide the most adequate estimation of exchange rate fluctuations' influence on the volumes and structure of external trade.

Appendix V.6

Principles for calculating net inflows/outflows of capital by the private sector

Net inflows/outflows of capital include all transactions by the private sector registered in the financial account of the balance of payments, as well as errors and omissions.

The private sector includes all residents except for the Government of the Republic of Kazakhstan and the National Bank of Kazakhstan ("General government" and "Central bank" sectors in the balance of payments).

For the purposes of this table, net acquisition of assets recorded in the financial account of the balance of payments is shown with the opposite sign: an increase in assets is presented with a "minus" sign, whereas a decrease - with a "plus" sign. Accordingly, aggregates (Net inflows/outflows of capital, Banks, Other sectors, Transactions of the Government sector, Financial account (excluding reserve assets)) are also presented with the opposite sign to that used in the balance of payments. Thus, outflow of capital includes transactions related to an increase in external assets or a decrease in external liabilities in this table. Inflow of capital is provided by an increase in external liabilities or a decrease in external assets.

External assets include investments of residents in foreign stocks or debt securities, loans and credits granted by residents to nonresidents, receivables of residents from nonresidents, foreign currency belonging to residents, residents' accounts abroad and other assets.

External liabilities include investments of nonresidents in domestic stocks or debt securities, loans and credits granted by nonresidents to residents, payables of residents to nonresidents, nonresidents' accounts in domestic banks and other liabilities.

Assuming that the errors and omissions in the balance of payments are mainly formed by the non-bank private sector transactions, this item is included in the calculation of net inflows/outflows of capital from other sectors.

EXTERNAL DEBT OF THE REPUBLIC OF KAZAKHSTAN as of March 31, 2014

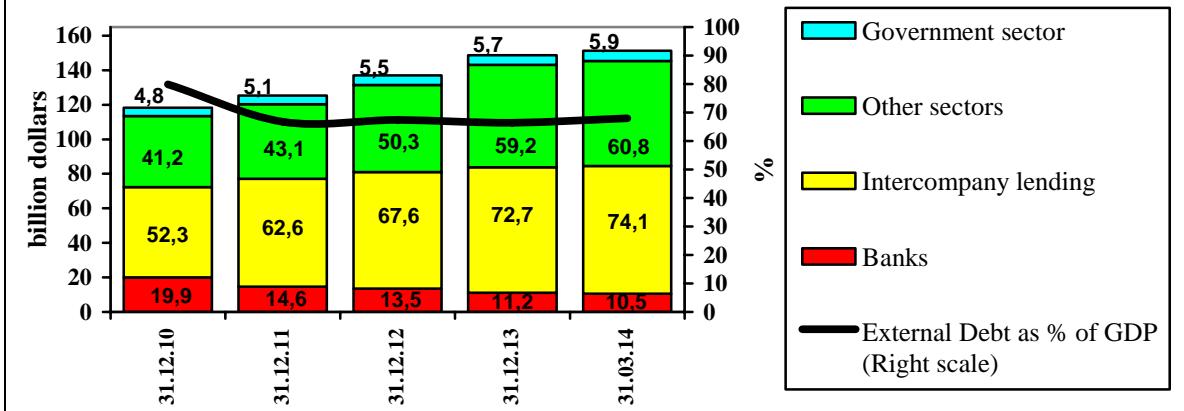

From the first quarter of 2013, Kazakhstan's balance of payments is compiled in accordance with the sixth edition of "Balance of Payments and International Investment Position Manual" (BPM6). The main methodological changes are provided in the press release of the National Bank No.25, which is available on the following webpage: <http://www.nationalbank.kz/?docid=199&switch=english>. Full implementation of BPM6 based on updated data sources is planned for 2014-2015.

External debt is the outstanding amount of the actual and unconditional liabilities of the country's residents to nonresidents at a particular point in time, which requires payment(s) of principal and/or interest. Meanwhile, the intercompany lending bears a certain level of conditionality, which is expressed by the dependence of terms of payments of the principal and/or interest on the results of operating activities of the borrowers. In the context of external debt management, systemic risks of the economy related to intercompany lending are estimated to be low since the creditor-direct investor share the risk of insolvency of the borrower through their participation in the management of its activities. In this regard, the intercompany lending, including obligations of Kazakhstan's banks and enterprises to foreign direct investors, foreign direct investment enterprises, as well as foreign fellow enterprises is presented separately in the structure of the external debt.

1. External debt position of the Republic of Kazakhstan

As of March 31, 2014 the external debt of the Republic of Kazakhstan equaled 151.2 billion US dollars (billion dollars), of which 10.5 billion dollars is the external debt of the "Banks"¹ and 5.9 billion dollars – the external debt of the government sector². The rest of the debt is attributable to "Other sectors"³ debt to affiliated nonresidents (the so-called intercompany lending - 74.1 billion dollars) and unaffiliated nonresidents (60.8 billion dollars) (Figure1).

Figure1. Dynamics of external debt

During the 1st quarter of 2014⁴, the external debt increased by 2.5 billion dollars, mainly due to the growth in total external debt of "Other sectors" (2.9 billion dollars). At the same time,

¹ Including second-tier banks and JSC "Development Bank of Kazakhstan"

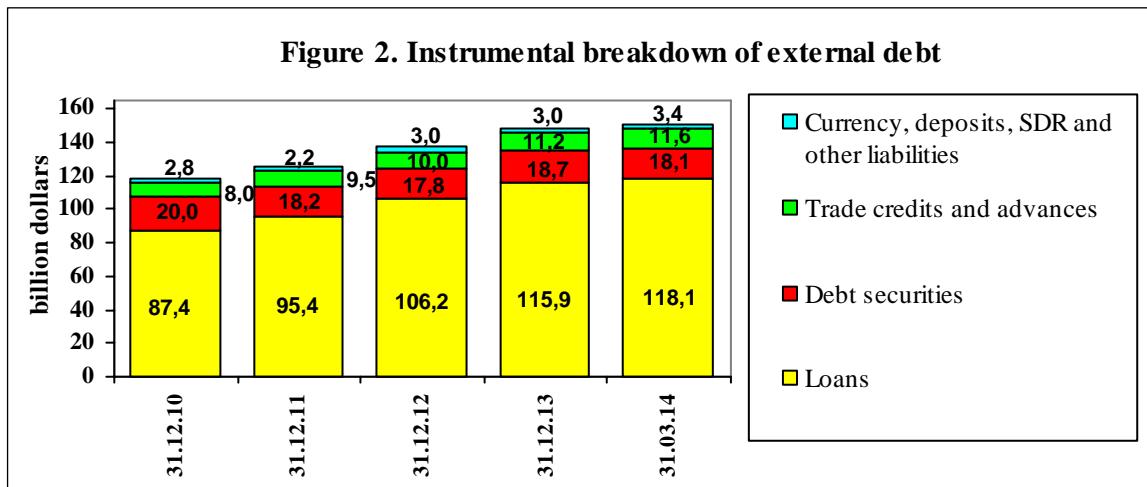

² Including "General government" (Government of the Republic of Kazakhstan) and the "Central Bank" (National Bank of Kazakhstan)

³ Including nonbank financial corporations, nonfinancial corporations, and households and nonprofit institutions serving households

⁴ Here and below, unless otherwise stated, are reflected changes in the structure of external debt that occurred in the 1st quarter of 2014

the external debt of the government sector decreased by 0.6 billion dollars.

Breakdown of the external debt by financial instruments has not undergone significant changes: it is still dominated by loans received from nonresidents (78%) and debt securities (12%) (Figure 2).

As of March 31, 2014, short-term on an original maturity basis external debt totaled 10.0 billion dollars and its share remained at the level of the average of the previous periods - 7% of the external debt.

The February 2014 devaluation of the domestic currency had no significant impact on the country's external debt due to negligible share of external debt denominated in tenge (2% at the end of 2013).

2. Main changes in the structure of external debt

A decrease in the external debt of the **Government of the Republic of Kazakhstan** was due to the repayment of government external debt in the amount of 0.2 billion dollars, which had been mainly targeted for anti-crisis support of the economy.

As a result of the decline in the volume of government securities in the hands of nonresidents, foreign debt of "General Government" for the reporting period decreased by \$0.1 billion dollars. (Table 1).

Table 1: External government sector debt and debt guaranteed by the government (million dollars)

| | 31.12.09 | 31.12.10 | 31.12.11 | 31.12.12 | 31.12.13 | 31.03.14 |
|---|----------------|----------------|----------------|----------------|----------------|----------------|
| Government sector debt: | 3 235.6 | 4 800.9 | 5 050.7 | 5 474.0 | 5 661.5 | 5 871.5 |
| Government of the Republic of Kazakhstan | 2 218.1 | 3 800.3 | 4 487.4 | 4 855.1 | 5 115.6 | 4 997.9 |
| The National Bank of Kazakhstan | 1 017.5 | 1 000.6 | 563.3 | 618.9 | 545.8 | 873.6 |
| External debt guaranteed by the government (of "Other sectors") | 486.2 | 310.5 | 442.0 | 470.6 | 495.2 | 443.0 |
| Total | 3 721.8 | 5 111.4 | 5 492.7 | 5 944.6 | 6 156.6 | 6 314.5 |

The external debt of **the National Bank of Kazakhstan** increased by 0.3 billion dollars due to liabilities on correspondent accounts and deposits of nonresidents in the National Bank of Kazakhstan.

It should be noted that the obligations of the "Central Bank" are represented mainly by special drawing rights (61% as of March 31, 2014) distributed by the IMF, the value of which changes from year to year solely due to exchange rate fluctuations.

External debt guaranteed by the government for the reporting period also slightly decreased (-52.1 million dollars) as repayment (42.3 million dollars) exceeded procurement (10.8 million dollars) on previously attracted foreign loans.

Currently, the government guarantee is given to the funds involved in the implementation of projects for the reconstruction of electric networks of Kazakhstan, as well as the development of transport infrastructure.

The share of external government sector debt and debt guaranteed by the government in the structure of external debt on the reporting date remained unchanged at 4%.

The external debt of the public sector⁵ as of March 31, 2014, was equal to 27.1 billion dollars, showing a decrease over the period by 0.3 billion dollars. Its structure is dominated by nonbank corporate sector liabilities to unaffiliated nonresidents which account for 68% of the external debt of the public sector, while the banking sector and intercompany lending account for 20% and 12% of public sector external debt, respectively.

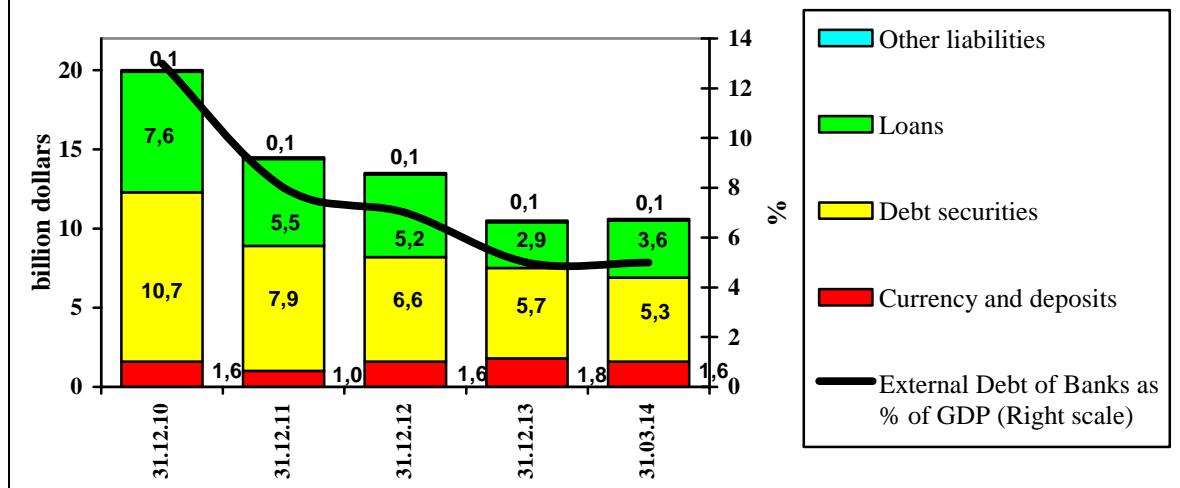

As for the structure of external debt of public sector by financial instruments – debt securities and loans are the most popular tools to raise funds (13.9 billion dollars, 12.7 billion dollars, respectively).

As the issuance of the debt securities allows funding of the general objectives of the issuer, provides access to significant debt resources with the possibility of subsequent refinancing (or early redemption of debt, if necessary) without the obligation of targeted use of the funds, this tool is very popular among financial and nonfinancial enterprises in the country.

Borrowed funds, attracted by the public sector are allocated mainly to finance extractive industries, oil and gas, transport infrastructure, telecommunications, support of agricultural projects, etc.

In the context of systemic risk, the broader definition of the external public debt (which includes the external government debt guaranteed by the government and public debt) is considered to be the most vulnerable. As of March 31, 2014 this figure was 32.9 billion dollars, or 15% of GDP.

Figure 4. Dynamics of external debt of "Banks"

Reduction of the external debt of "Banks" occurred mainly because of a decrease in the "Debt securities" (-0.4 billion dollars) item due to repayment of the Eurobonds with the nominal value of 450 and 500 million dollars by JSC "ATF Bank" and "Bank Center Credit",

⁵ Banks or organizations in which Government or the Central Bank directly or indirectly own more than 50 per cent of equity or are able to control them in any other way.

respectively, as well as acquisition of bonds of Kazakhstani banks by residents. There was also a reduction in balances of correspondent accounts and deposits of nonresidents located in the second-tier banks of Kazakhstan.

In accordance with BPM6, the structure of external debt of "Other sectors" (to non-affiliated nonresidents) consists of external debt of nonbank financial institutions ("Other financial institutions") and nonfinancial corporations, households and nonprofit institutions serving households ("Nonfinancial corporations, households, NPISHs").

Growth of external debt of "Other sectors" in the reporting period was due to an increase in external liabilities of "Nonfinancial corporations, households, NPISHs". The rise accounted for 1.5 billion dollars for the period, or 3%, while the growth of external liabilities of "Other financial institutions" was equal to 15.2 million dollars, or 1%.

Increase in external debt of "Other sectors" in the reporting period occurred mainly under the category of "Loans" (1.3 billion dollars), which can be viewed as a result of active attraction of funds from nonresidents for the implementation of major projects in oil and gas, mining and other sectors (including loans granted by Development Bank of China to JSC "Asian Gas Pipeline" and LLP "Beineu-Shymkent" in the amount of 4.7 and 1.8 billion dollars, respectively).

In general, all financial instruments of "Other sectors" showed an increase in liabilities in the 1st quarter of 2014.

The increase in external debt during the reporting period was also influenced by the growth of intercompany lending - namely, the growth of foreign liabilities to direct investors (Table 2).

Table2: Direct investment: intercompany lending

(million dollars)

| | 31.12.11 | 31.12.12 | 31.12.13 | 31.03.14 | The growth for the 1st quarter 2014. |
|---|-----------------|-----------------|-----------------|-----------------|--|
| 1. Debt liabilities of Kazakhstani enterprises of direct investment to direct investors | 59 589.4 | 63 605.8 | 68 893.5 | 70 233.1 | +1 339.6 |
| 2. Debt liabilities of Kazakhstani direct investors to direct investment enterprises (reverse investment) | 2 597.8 | 3 429.2 | 3 120.3 | 3 147.3 | +27.0 |
| 3. Debt liabilities of Kazakhstani enterprises to fellow enterprises | 389.0 | 546.5 | 670.4 | 675.9 | +5.5 |
| Intercompany lending | 62 576.2 | 67 581.5 | 72 684.3 | 74 056.3 | +1 372,0 |
| <i>as % of external debt</i> | <i>50%</i> | <i>49%</i> | <i>49%</i> | <i>49%</i> | |
| Including the external debt liabilities of foreign companies' branches | 46 577.8 | 51 293.7 | 56 863.5 | 57 746.5 | +883.0 |
| <i>as % of external debt</i> | <i>37%</i> | <i>37%</i> | <i>38%</i> | <i>38%</i> | |

This increase mainly occurred because of the financing of the branches involved in oil and gas projects in Kazakhstan by parent companies - namely, the provision of credits in commodity and monetary forms by nonresident direct investors as well as the accrual of dividends by joint ventures and foreign enterprises, which are due to direct investors in subsequent periods.

3. Absolute and relative parameters of the external debt

Due to the decrease of gross domestic product (GDP) in dollar terms in the 1st quarter of 2014, relative parameters of the external debt related to this indicator slightly deteriorated. In contrast, a significant increase in exports of goods and services (EGS) had a positive impact on another group of parameters. In particular, on March 31, 2014, the ratio of external debt to GDP ratio was 68.0% versus 66.4% at the end of 2013, and the ratio of external debt to EGS was 166.2% compared to 167.7%, respectively.

However, as was noted above, the intercompany lending bears a certain degree of conditionality, which is expressed by the dependence of terms of principal and/or interest payments on the results of operating activities of the borrowers. Accordingly, international practice is to exclude intercompany lending in the analysis of absolute and relative parameters of the external debt of the country.

The ratio of payments of interest on foreign long-term and short-term debt to exports of goods and services during the period can be viewed as a measure of the solvency of the country. This ratio indicates the conditions for attracting external funds and, therefore, the debt burden (Table 3).

Table3: Relative parameters of the external debt of the Republic of Kazakhstan

| | Coefficients, % | | | | |
|----------------------|-------------------|-------------------------------|-------------------|-------------------------------|------------------------|
| | External debt/GDP | External debt/GDP (excl. IL*) | External debt/EGS | External debt/EGS (excl. IL*) | Interest payments /EGS |
| 31.12.2009 y. | 98.3 | 55.1 | 235.0 | 131.7 | 11.0 |
| 31.12.2010 y. | 79.9 | 44.5 | 180.5 | 100.7 | 7.2 |
| 31.12.2011 y. | 66.7 | 33.4 | 140.0 | 70.1 | 5.3 |
| 31.12.2012 y. | 67.4 | 34.1 | 149.2 | 75.6 | 5.6 |
| 31.12.2013 y. | 66.4 | 33.9 | 167.7 | 85.8 | 5.6 |
| 31.03.2014 y. | 68.0 | 34.7 | 166.2 | 84.8 | 5.2 |

*intercompany lending

An important component of foreign assets, especially in terms of smoothing currency liquidity problems, are reserve assets of the National Bank, which as of March 31, 2014, were 2.6 times greater than the short-term on an original maturity basis external debt.

During the reporting period, the growth of external assets of the country (3%) outpaced the growth of external debt (2%), as a result of which the net external debt of Kazakhstan decreased by 1.5 billion dollars and was equal to 8 billion dollars, or 7% of GDP (compared to 17.3 billion dollars, or 8% of GDP at the end of 2013).

It should be noted that the government sector and the "Banks" sector still preserve the position of "net lender" in relation to the rest of the world in the amount of 75.5 and 15.1 billion dollars, respectively.

External debt: standard presentation

mln. USD doll.

Debt service schedule includes projected repayments of the outstanding external debt as of 31.03.2014 (the column "External debt") and the interest rate charged over the period subject to the projected repayments (the row "Interest").

The "till called for" column includes:

- "Banks" - liabilities of commercial banks by correspondent and current accounts, call deposits of nonresidents and arrears;
- "Other sectors" - arrears.

The article "Other sectors" does not include intercompany lending which is presented as an independent article in the External Debt structure

The sector "Banks" includes commercial banks and the Development Bank of Kazakhstan.

The part of the external debt with no detailed repayment information is included in the column "no information":

- the sector "Banks" includes other liabilities with no repayment information;
- generally, the "Other sectors" and "Direct investment: Intercompany lending" include the information on the trade credit liabilities of residents to nonresidents and the liabilities of foreign subsidiaries based in Kazakhstan.

¹Short-Term External Debt (remaining maturity basis) presents a share of a gross external debt with term of repayment within forthcoming year, i.e. includes outstanding short-term external debt (original maturity) and the part of outstanding long-term external debt (original maturity) due to be paid in one year or less.

²Short-Term External Debt (original maturity) also includes:

- other debt liabilities on which exact terms of return are not known;
- vostro accounts, current accounts, call deposits and conditional deposits on sector "Banks" and "Central Bank";
- debts of Other sectors under short-term trade credits and loans on which National Bank of Kazakhstan does not have information under repayment schedules.

The column "no information" shows the balance of external debt about which the National Bank of Kazakhstan does not have information:

- in the Banks' sector the column "no information" shows the amount of other liabilities to nonresidents about which there is no information;
- In the Other sectors and intercompany lending the column "no information" mainly contains information on the debt of residents on trade (commercial) loans to no-residents and other liabilities to nonresidents about which no information is available.
